LIBRARY

The opening of the Twenty-Third Parliament of Canada on October 14, 1957, was an occasion of unprecedented significance for Canadians. Her Majesty Queen Elizabeth II, accompanied by His Royal Highness the Prince Philip, read the Speech from the Throne and thus became the first Sovereign to inaugurate in person a session of Parliament as Head of State of Canada.

PREFACE

The 1957-58 edition of the Canada Year Book continues a series of annual publications giving official statistical and other information on almost every measureable phase of Canada's development. As the economy of the country has expanded, the Dominion Bureau of Statistics has extended its program of statistical compilation and analysis and the Canada Year Book has endeavoured to present the story of this development, summarizing a great mass of detailed statistical information concisely within the covers of one volume and supplementing it with data from other Departments of the Federal Government and from the provinces.

Special feature articles are presented in each edition of the Year Book. Those in the current issue include: "The International Geophysical Year" (pp. 35-38); "Developments in Canadian Immigration" (pp. 154-176); "Health in Canada" (pp. 232-235); "The Philosophy of the Royal Canadian Mounted Police" (pp. 332-334); "Postwar Agriculture" (pp. 392-396); "The Pulp and Paper Research Institute of Canada" (pp. 489-491); "Canada's Mineral Industry 1956-57" (pp. 495-518); "Groundfish Species in the Canadian Fisheries" (pp. 591-595); "The Changing Pattern of Canada's Housing" (pp. 732-734); "History of the Labour Movement in Canada" (pp. 795-802); "The Telecommunications Branch of the Department of Transport" (pp. 894-896); and "A History of Canadian Journalism 1752 (circa)-1900" (pp. 920-934).

In addition, other features have been introduced and extensive revisions made in the textual and statistical material of the various chapters. Among these are analyses of the Population and Agriculture Census of 1956; an expanded treatment of the executive and legislative branches of the Federal Government and a revised summary and chart on the administrative functions of its various departments and agencies; a brief outline of Canada's international activities during 1955-57; a new survey of formal education and an initial account of the Canada Council in support of the arts, letters and social sciences; a further instalment on the construction of the St. Lawrence Seaway and Power Project and of oil and gas pipelines, as well as the up-dating of basic material dealing with such subjects as immigration, vital statistics, public health and welfare, scientific, medical and industrial research, forestry, water power development, mineral production, manufacturing, the labour force, prices, public finance, banking, insurance, transportation and communication by various media, the domestic marketing of commodities, foreign trade, national income and expenditure and Canada's international investment position. Numerous charts graphically portray significant trends in the developing Canadian economy, while the Introduction (pp. xi-xix) describes briefly the state of the economy during 1957.

The concluding chapter, entitled "Sources of Official Information and Miscellaneous Data", presents handy reference material listing Government information services, special material published in earlier Year Books, federal legislation of recent sessions of Parliament, a Canadian chronology of events, a register of official appointments, and a statistical summary of the progress of Canada since 1871.

In the Appendix certain material on Government (Chapter II) is brought up to the date of going to press, including a listing of the personnel of the Eighteenth Ministry of Canada and the names and addresses of the Members of the House of Commons elected on Mar. 31, 1958, together with the Fifteenth Ministry of Manitoba.

Enclosed in the pocket on the inside back cover of the volume are two maps: a detailed map depicting the principal mineral areas and a map showing the distribution of population based on the 1956 Census, specially printed on transparent paper to facilitate its use as an overlay on the mineral map.

The present volume has been produced in the Canada Year Book Section of the Information Services Division by Miss M. Pink, Assistant Editor of the Year Book and Chief of the Section, with the assistance of Mr. H. Crombie, Miss C. Freeth and the Year Book staff, under the editorship and direction of Dr. C. C. Lingard, Director of the Division. Charts, graphs and maps (not otherwise credited) have been prepared in the Drafting Unit of the Bureau.

The co-operation of numerous officials of the various Departments of the Canadian and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible either to the persons or to the branches of the public service concerned.

Information bearing on any errors or omissions and suggestions respecting methods of treatment are welcomed by the Director of the Information Services Division.

WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed. An exception however is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant. Billion where used represents 1,000 million.

The following table shows the weights and measures used in Canada in connection with the principal field crops and for wheat flour and fruits:—

	<i>Pounds per Bushel</i>		<i>Pounds</i>
Grains—		Fruits (standard conversions)—	
Wheat.....	60	Apples, per barrel.....	135
Oats.....	34	Apples, per box.....	43
Barley.....	48	Pears, per bushel.....	50
Rye.....	56	Plums “ “.....	50
Buckwheat.....	48	Cherries “ “.....	50
Flaxseed.....	56	Peaches “ “.....	50
Corn.....	56	Grapes “ “.....	50
Mixed grains.....	50	Pears, per box.....	42
All others.....	60	Strawberries, per quart.....	1.25
		Raspberries “ “.....	1.25
		Loganberries “ “.....	1.25

Wheat Flour—

1 barrel equals 196 pounds; approximately 4.5 bushels of wheat are used in the production of a barrel of flour.

Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. It must be borne in mind that where the list below refers to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures, 1 Imperial fluid ounce equalling 0.96 United States fluid ounce. Similarly 1 Imperial gallon equals 1.2 United States gallon.

1 Imperial pint=20 fluid ounces.	1 Imperial proof gallon=1.36 United States proof gallon.
1 United States pint=16 fluid ounces.	1 Short ton=2,000 pounds.
1 Imperial quart=40 fluid ounces.	1 Long ton=2,240 pounds.
1 United States quart=32 fluid ounces.	1 Barrel crude petroleum=35 Imperial gallons.
1 Imperial gallon=160 fluid ounces.	
1 United States gallon=128 fluid ounces.	

Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31.

Throughout the Year Book, fiscal year figures are indicated in the text and headings of tables; otherwise figures are for calendar years.

ERRATUM

Page 308: Cross references in the first paragraph to Chapter II should read "pp. 58-59 and 59-60" instead of "pp. 42-43 and 43-44".

INTRODUCTION

THE CANADIAN ECONOMY DURING 1957*

The year 1957 was characterized by a marked levelling off in the rate of economic activity. This change in the upward trend in the major economic indicators in 1957 followed a period of sharp advances during the preceding two years. It will be recalled that in 1955 and 1956 demand was expanding very rapidly and large quarter-to-quarter increases were occurring in the value of the nation's total production, the gross national product. By 1957, however, this quarter-to-quarter advance in final expenditures had slackened appreciably and in the fourth quarter of the year a moderate decline in output was recorded. Gross national product, seasonally adjusted at annual rates, amounted to \$31,460,000,000 in the fourth quarter of the year compared with \$31,748,000,000 in the third quarter, and \$31,443,000,000 for the year 1957 as a whole.

The rapid expansion of investment outlays which was a notable feature of 1955 and 1956 moderated in 1957; investment in machinery and equipment declined in the last three-quarters of the year, and the rate of growth in outlays for non-residential construction slackened. On the other hand, residential construction began to move upward during the year, following a period of successive declines. Accompanying these developments, exports of goods and services, which had earlier provided one of the main stimulants to investment in resource industries, moved irregularly at a level barely in excess of the year 1956. At the same time, the upsurge in imports that occurred in 1956 subsided in 1957, and declines were recorded in the seasonally adjusted value of imports of goods and services throughout the course of the year. Business inventory accumulation, which reached its peak in the middle of 1956, declined steadily throughout 1957 and in the fourth quarter of the year shifted to a position of moderate net liquidation.

It may be noted that while neither final purchases nor inventories were creating new demands on production in the fourth quarter of 1957, a good deal of the effect of the curtailment on the flow of expenditures was mitigated by the decrease in the imports of goods and services which amounted to 4.5 p.c. between the third and fourth quarters of the year.

Associated with these developments on the expenditure side in 1957, national income rose by almost 3 p.c. above the level of the previous year, though it was moving downward in the fourth quarter. Corporation profits declined steadily throughout the year from the peak reached in 1956, and registered a drop of about 7 p.c. on the year-to-year comparison. Labour income continued to rise in 1957 until the fourth quarter of the year, when it moved downward slightly in association with declines in employment; however, on the full year's comparison, labour income was more than 7 p.c. above the level of the year 1956, this being the major factor behind the 5-p.c. rise in personal income. As has been noted, crop production fell sharply in 1957, and this was reflected in a decline of \$400,000,000 in accrued net income of farm operators from farm production. There was a very small gain in net income of unincorporated non-farm enterprises in 1957, in contrast with the fairly substantial gains that had occurred in the preceding two years.

These changes in the main statistical aggregates resulted in a gross national product in 1957 of about \$31,443,000,000, a gain of 4 p.c. over the level of the year 1956 in value terms, but basically unchanged from the preceding year in terms of the physical volume of output; thus, price factors were the major element in the higher value of production in 1957. The unchanged volume of output in 1957 compares with the unusually large gains of about 7 p.c. in 1956 over 1955 and 9 p.c. in 1955 over 1954. It should be noted in this connection that the production figures in 1957 include a sharp drop in crop output. The decline in grain production is estimated to have amounted to about 1 p.c. of the gross national product, so that the non-farm gross national product in 1957 was higher than in 1956 by about 1 p.c. in volume terms.

* Prepared in the Research and Development Division, Dominion Bureau of Statistics.

PRODUCTION BY INDUSTRIES

The physical volume of output of all industries producing goods and services was at about the same level in 1957 as in 1956. When agriculture is removed from the comparison the remaining industries show an increase of about 1 p.c.; this increase was apparent in both the total for services-producing industries and that for goods-producing industries, exclusive of agriculture. These aggregates, however, hide important and divergent movements at the industry level.

During the course of 1957 there was a decrease in the rate of productive activity in certain industries. On a seasonally adjusted basis, goods output (less agriculture) declined throughout the year. Total services output was irregular during 1957 but a general decline was not apparent. The volume of production for manufacturing declined about 8 p.c. between January and December and most of the fall-off was concentrated in the durable manufactures group. Mining production rates kept increasing until April but were unsettled for the remainder of the year. Primary forest output fell off substantially during the year owing to deteriorating export and domestic markets. Transportation industries reflected the rather unsettled industrial production picture in 1957 and tended to move with manufacturing, forestry and mining.

In comparing annual output levels, agriculture was down about 17 p.c. in 1957. The volume of farmers' marketings fell almost 7 p.c. while the volume change in farm grain stocks reflected the substantially smaller crop in 1957. From a production standpoint, grain output in 1957 fell by about one-half as compared with 1956 but production of animal products remained practically unchanged. In the other primary resource industries movements were varied. Forestry output, affected by deteriorating domestic and foreign markets for pulpwood and lumber, was down by more than 11 p.c. Both pulpwood cut and output of other forest products were down by about the same percentage. Fishing and trapping output declined moderately in 1957. Electricity and gas utilities continued to expand; the output of electric power showed a 4-p.c. increase while gas distribution, reflecting the sharply increasing use of natural gas, advanced 14 p.c. The total output of Canadian mines showed one of the smallest increases in the postwar period with a gain of 6 p.c. Metals and fuels were up 12 and 5 p.c. respectively but non-metal mining was down 2 p.c. Uranium production rose sharply and accounted for most of the increment in metals. Small production gains were recorded for gold and nickel, while small decreases showed up in copper, silver, iron ore, lead and zinc. In contrast with recent years when iron ore exports showed substantial gains, only a minor advance was recorded in 1957. During the later months of the year export volume was down from corresponding months of 1956 mainly because of cut-backs in United States' steel-using industries. Within fuels, crude petroleum output rose 6 p.c. and more than offset a 12-p.c. decline in coal production. However, the small increase in petroleum mining represented a substantial change from the very large production gains in recent years.

The physical volume of output of manufacturing industries was off nearly 2 p.c. in 1957 with non-durables up slightly and durables down 5 p.c. Within the non-durable group of manufacturing industries, gains in output were recorded by chemicals, foods and beverages, leather, tobacco and tobacco products and products of petroleum and coal. Almost offsetting these increases, however, were declines in rubber products, textiles, clothing and paper. Printing and publishing showed little change. Within the durable group, every major industry group except non-metallic mineral products, which rose moderately, suffered production set-backs ranging from 2 p.c. in transportation equipment to 9 p.c. in wood products. Iron and steel, non-ferrous metal products and electrical apparatus and supplies declined 5, 6 and 8 p.c. respectively.

Within the services-producing division of industries, only the transportation, storage and communications group reflected reduced volume of activity and this was largely concentrated in railway freight. In the later part of 1957 there was a very noticeable slowdown in activity in civil aviation and oil pipelines—industries which had shown substantial gains in recent years. The communications component continued to expand, reflecting the substantial expansion of radio and television broadcasting and telephone

services. Retail and wholesale trade volume showed little change in 1957 compared with 1956. Two important changes occurred within retail trade—grocery chains increased their volume of sales by more than 8 p.c. and motor vehicle dealers suffered a decline of about 10 p.c. Within the other services-producing industries—including finance, insurance and real estate, and government and other services—available related data suggest increased volume of activity ranging from 3 to 5 p.c.

EMPLOYMENT

Turning now to employment, the number of persons with jobs in 1957 averaged 5,661,000, a gain of 135,000 or 2.4 p.c. over 1956. The number of persons with jobs in the non-agricultural sector rose by about 3.4 p.c. It may be noted that this increase in non-farm employment was considerably higher than the year-to-year gain in non-farm production, which was estimated to have risen by only about 1 p.c. The divergence between the employment and output indicators implies a decline in output per person employed in 1957. This development may be partly explained by a decline in average hours worked per week in 1957 since such a decline occurred in manufacturing and mining. Another factor may be the reluctance of employers to dismiss workers in the initial stages of production cut-backs pending clarification of the outlook for new orders. Also, there is some evidence to suggest that in both Canada and the United States the very large additions to plant capacity in recent years have increased the need for administrative and over-head staff relative to the requirements for production workers.

The increment to the labour force in 1957 was 210,000, almost twice the average rate of growth in the preceding five years. This unusually large increase is associated with higher participation rates as well as with the extraordinarily high level of immigration in 1957. The number of persons without jobs and seeking work averaged 254,000 persons for the full year, that is, 4.3 p.c. of the labour force compared with 3.1 p.c. in 1956. In addition, the number of persons on short time or temporarily laid off averaged about 50 p.c. higher than in the preceding year. In the fourth quarter of 1957, persons without jobs and seeking work accounted for 5.0 p.c. of the labour force.

PRICES

Final product prices continued to advance throughout 1957, though the rate of increase slackened appreciably during the course of the year. It is estimated that the price element in the gross national product rose by only about one-quarter of 1 p.c. from the third to the fourth quarter, constituting the smallest quarter-to-quarter increase in a two-year period. For the year as a whole, end product prices in 1957 averaged about 4 p.c. above those of the year 1956.

The 3.7-p.c. advance in the consumer sector in 1957 was substantially greater than the price rise in this sector in the preceding year, when it amounted to only 1.7 p.c. The 4.1-p.c. rise in the price of investment goods in 1957, however, was slightly less than the previous year's rise of 5.6 p.c.

After the end of 1956, the advance in final product prices was not accompanied by price increases as measured by the general wholesale price index; from the fourth quarter of 1956 through to the fourth quarter of 1957, the wholesale price index declined by about 1 p.c. compared with an advance of 3 p.c. for the corresponding period of 1956. The prices of raw and partly manufactured goods and of industrial materials declined by 5 and 7 p.c. respectively in this period, compared with gains of 2 and 3 p.c. in the same period a year previously. Fully and chiefly manufactured goods advanced by 1 p.c. from the end of 1956 to the fourth quarter of 1957, compared with an advance of 4 p.c. for the same period of the preceding year. From the third to fourth quarters of 1957, the wholesale price index declined by about 1 p.c. The impact of these changes in wholesale prices is, to some extent, reflected in the valuation of inventories by business. It is estimated that the inventory valuation adjustment required for national accounts purposes amounted to only about \$60,000,000 for the year 1957, compared with the \$260,000,000 adjustment made in 1956.

GROSS NATIONAL PRODUCT, 1955 - 1957

(SEASONALLY ADJUSTED ANNUAL RATES)

BILLION DOLLARS

PERCENTAGE CHANGES IN VALUE AND VOLUME OF GROSS NATIONAL EXPENDITURE AND SELECTED COMPONENTS 1956 TO 1957

THE COMPONENTS OF GROSS NATIONAL EXPENDITURE

Personal consumption expenditures rose to \$19,768,000,000 in 1957, close to 6 p.c. higher than in 1956. All the increased spending was on services and non-durables; purchases of durables remained stable. The major part of the rise in total spending represents the higher prices prevailing in the consumer sector. The modest increase in the real volume of consumption in 1957 is in contrast to the decided gains recorded in the two preceding years; on a per capita basis, real consumption fell slightly, the first such decline since 1950-51.

Purchases of non-durable goods were up about 5 p.c., with the largest gains in food, alcoholic beverages, tobacco and gasoline. Purchases of clothing were moderately higher. Prices of non-durable goods averaged nearly 3 p.c. higher in 1957, mainly as a result of the rise in prices of food, so that real consumption was to that extent lower than the value figures indicate.

Outlays for durable goods were stable in 1957. House furnishings was the only category of durable goods that showed any increase. Purchases of appliances and radios were about the same as in 1956. In real terms, purchases of durables in 1957 were about 3 p.c. below the level of the preceding year.

In this connection, it is interesting to note that consumer credit outstanding on the books of instalment finance companies increased only 3 p.c. in 1957, in contrast to increases of 26 p.c. in 1956 and 22 p.c. in 1955, both years in which purchases of durables were high and rising.

Consumer expenditure on services rose 9 p.c., with increases recorded in all the groups. One of the largest gains was in expenditure on shelter, reflecting the addition to the stock of housing and the rise in rents. Spending on personal service and medical care rose substantially. The rise in prices, some 4.5 p.c., was very pronounced in the services sector.

GOVERNMENT EXPENDITURE ON GOODS AND SERVICES

Government expenditure on goods and services amounted to \$5,612,000,000 in 1957, 7 p.c. higher than in 1956, with the major increases at the provincial and municipal levels. Most of the increase at all levels of government was accounted for by larger expenditures for wages and salaries and for construction.

BUSINESS GROSS FIXED CAPITAL FORMATION

In 1955 and 1956 the high and rising demand in world markets for the products of Canada's resource-based industries encouraged a vigorous expansion of productive capacity. This expansion centred on those industries producing raw materials and radiated to the fuel, power and transportation industries. Accordingly, an unusually large number of such projects were initiated in those years. In 1957, business expenditures for plant and equipment rose to \$5,965,000,000, an increase of nearly 14 p.c. over the preceding year. This increase reflected the large number of projects undertaken in earlier years and at various stages of completion in 1957, as well as those launched during 1957. The 1957 gain compares with an increase of 37 p.c. in 1956 and thus represents a distinct slowing down in the extraordinarily high rate of growth characteristic of the latter year.

Within business expenditures for plant and equipment, the emphasis in 1957 shifted strongly toward new construction which, at \$3,233,000,000, was about 25 p.c. higher than in 1956. This shift was partly attributable to the fact that expenditures on such major projects as the St. Lawrence Seaway and Power Project and the Trans-Canada Pipeline were moving towards their peak in 1957. Expenditures for new machinery and equipment were \$2,732,000,000, only about 3 p.c. higher than in 1956, in contrast to an increase of 34 p.c. in the preceding year. Purchases of machinery and equipment appear to have reached their peak in the first quarter of the year. Both domestic shipments and imports of the main categories of machinery and equipment declined in the second half of 1957.

Considering the business investment program in 1957, major increases occurred in transportation and storage where a gain of 50 p.c. followed one of 87 p.c. in the previous year, and in public utility operation where a gain of 24 p.c. followed one of 49 p.c. in 1956. These two groups, which had absorbed about 29 p.c. of total business investment in 1956, accounted for 54 p.c. of the total in 1957. The two major projects mentioned earlier, the Seaway and the Trans-Canada Pipeline, were in part responsible for the importance of these two groups. The increases in capital expenditures in service industries, trade and communications were also fairly large, ranging from 16 to 19 p.c. On the other hand, capital expenditures in manufacturing were only slightly higher than in the previous year, with substantial increases in some manufacturing industries nearly counterbalanced by declines in others. In mining, quarrying and oil wells, there was a further advance over 1956 but in the other primary industries, and in the construction industry, capital expenditures were lower than in the preceding year, much the most marked rate of decline being in forestry where new investment fell by more than 40 p.c.

Expenditures on new residential construction in 1957 amounted to \$1,424,000,000, 7 p.c. lower than in 1956. In response to easier conditions in mortgage markets and an improved supply of labour and materials, housing starts, which on a seasonally adjusted basis had been falling during 1956, made a strong recovery during 1957, and by the last quarter of the year were running at a rate of nearly 150,000 units compared with about 86,000 in the first quarter. For the year as a whole, about 122,000 housing units were started and about 117,000 completed, compared with 127,000 starts and 136,000 completions in 1956.

Of the 9-p.c. increase in total business gross fixed capital formation, about half represented higher prices. The largest element of price increase, about 5 p.c., was in the machinery and equipment sector, with the result that the volume of such purchases was lower by 2 p.c. In residential construction the price factor amounted to about 3 p.c., leaving this component lower in real terms by about 9 p.c.; in non-residential construction, the element of price increase was somewhat larger, leaving the volume of such expenditures higher by more than 20 p.c.

INVESTMENT IN INVENTORIES

The addition to inventories is estimated to have been \$142,000,000 in 1957 compared with \$815,000,000 in 1956. This sharp decline in the rate of accumulation reflects some liquidation of farm stocks and a marked slackening in the rate of build-up of business inventories, which amounted to \$243,000,000 in 1957 compared with about \$545,000,000 in 1956. The peak rate of accumulation reached in the second quarter of 1956 gave way to a falling rate of investment in stocks which continued until the last quarter of 1957 when some liquidation took place.

The lower rate of investment in business inventories in 1957 was common to almost all industry groups but was especially pronounced in manufacturing. Among manufacturing industries, the most marked decline occurred in iron and steel and in pulp and paper products; two other industries, electrical apparatus and supplies and wood and wood products, shifted from accumulation in 1956 to liquidation in 1957. Only a few manufacturing industries showed a higher rate of accumulation in 1957 than in 1956, foods and beverages being among them. There was some build-up in the clothing industry in 1957, as opposed to a drawing-down of stocks in 1956.

Additions to stocks of retailers and wholesalers were also much lower in 1957 than in the preceding year. In the durable groups there was either a smaller rate of accumulation or actual liquidation; in the non-durables group, however, accumulation in some instances was higher than in the preceding year.

EXPORTS AND IMPORTS OF GOODS AND SERVICES

Exports of goods and services amounted to \$6,375,000,000 in 1957, a fractional increase over 1956 which compares with increases of about 10 p.c. in the two preceding years. A small gain in commodity exports in 1957 was partially offset by a decline in receipts from invisible items.

Canada's exports of goods and services rose sharply in 1955 and 1956, against a background of continued expansion of industrial production in Western Europe, of recovery from recession in the United States, and a greatly enhanced capacity to supply many of the basic commodities demanded on world markets. In 1957, markets for some primary products weakened, with the result that commodity exports at \$4,909,000,000 were very little higher than in 1956. Further advances in exports of the products of some newly developed resource industries helped to offset losses elsewhere—for example, the gains in uranium and oil. However, of the nine commodity groups, only two were lower than in 1956: exports of agricultural and vegetable products were off more than \$140,000,000 or about 15 p.c., reflecting the sharp reduction in sales of wheat and other grains; in the wood, wood products and paper group, a drop of 4 p.c. was associated with weaker markets for lumber and wood pulp. A gain of 5 p.c. in exports of non-ferrous metals and their products was the outcome of a large increase in sales of uranium, from \$46,000,000 to \$128,000,000, a substantial increase in exports of nickel, and declines in all other major metals; the decline in exports of copper, lead and zinc products (the prices of which were down considerably) amounted to about \$50,000,000 or 16 p.c. Exports in the non-metallic group were up 19 p.c. Crude petroleum exports were \$141,000,000, a 36-p.c. gain despite the marketing problems that developed during the course of the year, and significant gains were reported in the exports of asbestos and asbestos products. Exports of iron and its products were higher by about 13 p.c., reflecting increases in farm and other machinery as well as in sales of iron ore. Additional gains were made in animal and animal products where exports were up about \$42,000,000 or 16 p.c., almost all of which was attributable to a more than four-fold increase in sales of cattle.

Receipts from invisibles were \$1,466,000,000 in 1957, nearly 3 p.c. lower than in 1956. Receipts from tourists and on interest and dividend account were higher but receipts from freight, miscellaneous items and sales of gold declined.

Imports of goods and services, at \$7,758,000,000, showed very little change in 1957 from the level of the previous year, a relative stability contrasting with gains of 19 and 16 p.c. in 1956 and 1955. The value of commodity imports in 1957 was, in fact, somewhat lower than in 1956, but payments for services rose.

Imports of commodities amounted to \$5,487,000,000 in 1957, a drop of about 1.5 p.c. from the preceding year. The earlier strong upward trend was reversed during the course of the year and was associated with the turn-around in machinery and equipment outlays, the falling rate of inventory accumulation, and the lower level of consumer outlays for durables. Imports of passenger cars and trucks were down 21 p.c., farm implements and machinery by 13 p.c., mining and metallurgical machinery by 9 p.c., and rolling-mill products by 6 p.c. Imports of iron and its products in total were lower by 4 p.c. in contrast to the impressive increases in this category in the two preceding years (nearly 40 p.c. in 1956). Imports of non-ferrous metals and products were also somewhat lower. The changes in the main commodity groups, positive and negative, were all fairly small.

Payments for services rose to \$2,271,000,000 in 1957, about 4 p.c. higher than in 1956. The most important element in this increase was the 16-p.c. increase in interest and dividends paid abroad but there were also increases in the other invisible items, the single exception being freight and shipping for which payments were slightly lower.

The deficit on international current account was \$1,383,000,000 in 1957, only slightly above the previous peak reached in 1956. However, the imbalance on services was sharply higher, rising from \$624,000,000 to \$805,000,000 and displacing merchandise trade as the principal source of the deficit. By the fourth quarter of 1957, the deficit had fallen to an annual rate of \$1,100,000,000, from the peak in the second quarter of \$1,600,000,000.

The rise in price in the external sector was comparatively small in 1957. While export prices receded a little during the course of the year, they averaged slightly higher for the year as a whole than in 1956. The margin of increase was somewhat greater for import prices. Thus, in terms of volume, exports of goods and services were stable while imports of goods and services showed a slight reduction.

THE COMPONENTS OF GROSS NATIONAL PRODUCT

LABOUR INCOME

Labour income rose to \$15,825,000,000 in 1957, more than 7 p.c. above the year 1956. With the number of paid workers up about 3 p.c. and hours of work somewhat reduced in some major industries, a large part of this increase was attributable to higher wage rates.

Almost all industrial groups shared in the advance. The service industries continued to absorb more workers, in keeping with the postwar trend in the growth of these industries. Thus, the largest income gains were recorded in the services-producing industries, with increases of between 10 and 14 p.c. in trade, finance, insurance and real estate, services proper (personal, business, community, recreational and government), public utilities and communications. The increase in labour income in the mining industry was of the same general order, reflecting an advance in employment and in wage rates. In manufacturing, where somewhat increased employment and higher wage rates were offset by shorter hours, the rise in labour income was 5 p.c. The 8-p.c. advance in labour income in the construction industry contrasted with the very much larger gains recorded in this industry in the previous year. Forestry was the only major industry in which labour income declined, reflecting the sharply reduced employment and income in this industry in the latter part of the year.

INVESTMENT INCOME

Investment income in 1957 was \$4,684,000,000, an amount 2 p.c. lower than in the preceding year. A drop in corporate profits of about 7 p.c., coupled with a further substantial advance in dividends paid abroad, reduced corporate profits entering national income by 11 p.c. Government investment income was little changed in total, since the fall in government trading profits (mainly the result of reduced earnings of the Canadian National Railways) was approximately offset by increases in other components of government investment income. Interest, dividends and net rental income of persons rose by 11 p.c.

Among the major divisions, the only industries showing higher profits in 1957 were finance and retail trade, where increases were both 8 p.c.; within manufacturing, only the food and petroleum industries earned larger profits in 1957, with gains of 7 and 5 p.c. respectively. Profits fell most sharply in the wood products and non-ferrous metal groups of manufacturing. In the mining industry the rate of decline was 27 p.c. to 30 p.c. The deterioration in foreign and domestic markets reduced prices and curtailed output for some of the products of these industries, with consequent adverse effects on earnings. Profits in transportation, communications, storage and public utilities as a group were down about 6 p.c.

NET INCOME OF UNINCORPORATED BUSINESS

Accrued net income of farm operators from farm production is estimated to be \$968,000,000, \$400,000,000 less than in 1956, a decrease reflecting mainly the much smaller crop of major grains in the Prairie Provinces. According to preliminary estimates, however, farm cash income is estimated to have declined by only 5 p.c.; smaller participation payments by the Canadian Wheat Board and lower returns from sales of grains and poultry products accounted for this decline.

Net income of non-farm unincorporated business amounted to \$1,941,000,000 in 1957, slightly higher than in the preceding year. Incomes in trade and services continued to rise, reflecting the growth of consumer demand in these sectors, but the lower level of housing adversely affected net income in the construction industry.

INDIRECT TAXES LESS SUBSIDIES

Indirect taxes less subsidies amounted to \$3,802,000,000 in 1957, about 6 p.c. higher than in 1956. The easing in the demand for imports was reflected in lower yields from customs import duties but this loss in revenue was more than offset by higher yields from excise duties and taxes, leaving federal indirect taxes about 1 p.c. above the level of 1956. Provincial and municipal revenues from indirect taxes increased by roughly similar proportions, 9 or 10 p.c., with the bulk of the increase attributable to gasoline taxes at the

provincial level and to real and personal property taxes at the municipal level. Subsidies were lower by \$13,000,000, mainly because of smaller payments by the Federal Government on the cost of storing grain.

PERSONAL INCOME AND SAVING

Personal income amounted to \$23,142,000,000 in 1957, an increase of about 5 p.c. over the preceding year; this was a significantly larger increase than occurred in national income, which rose by only 3 p.c. Transfer payments advanced by 18 p.c. and showed the largest gain of any component of personal income. Rates of payment under the family allowance and old age security schemes were raised during the course of the year and a new transfer payment out of oil royalties was introduced in the Province of Alberta. The larger volume of unemployment, together with some extension of benefits, raised payments in the form of unemployment benefits by 45 p.c. Maintenance of dividend payments despite a fall in corporate profits was another factor in the divergence between national and personal income.

With a progressive tax structure, the rise in taxable incomes made for a fairly sharp increase in personal direct taxes, which were up 11 p.c. Income at the disposal of consumers for spending amounted to \$21,235,000,000, 5 p.c. above the level of 1956. Since consumer prices were over 3 p.c. higher, personal disposable income in real terms advanced only moderately, in contrast to the substantial advance that occurred in 1956; on a per capita basis, real disposable income declined slightly in 1957.

The advance in consumer spending matched fairly closely the rise in disposable income, leaving the rate of personal saving only slightly lower than in the preceding year. Personal saving dropped to \$1,467,000,000 in 1957 from \$1,541,000,000 in 1956.

NATIONAL SAVING AND INVESTMENT

Gross national saving fell from \$6,219,000,000 in 1956 to \$6,063,000,000 in 1957. The sources of saving were considerably altered. The surplus on consolidated government account, which at \$379,000,000 represented a significant part of total saving in 1956, was reduced to \$52,000,000 in 1957. Savings in the form of undistributed profits were also lower. An increase in depreciation allowances acted as a partial offset to the reduction in the other forms of saving.

The sharply reduced rate of accumulation of inventories (which shifted downward by \$673,000,000) brought the level of total gross capital formation slightly below the 1956 level. However, in 1957 as in 1956, total national saving fell short of investment requirements and this deficiency was met from foreign sources. In both years the deficit on international current account amounted to about \$1,400,000,000, and this imbalance was chiefly financed by net inflows of capital for long-term investment.

PART I.—GEOGRAPHY*

Canada comprises the greater part of the northern half of North America and lies between the United States, Alaska and Greenland. In longitude Canada extends from Cape Spear, Newfoundland, at 52°37'W, to Mount St. Elias, Yukon Territory, at 141°W, a distance of 88°23'. In latitude it stretches from Middle Island, Lake Erie, at 41°41'N, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at 83°07'N. Thus Canada is essentially a western and a northern country, a fact of increasing strategic significance. Moreover the climatic, vegetal and soil belts are drawn out into broad east-west zones, thereby supporting the east-west orientation of the main frontier of the country and aiding Canada's historic east-west development.

The shape of Canada is like a distorted parallelogram with its four corners making important salients. In the north the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist Republics. In the south the salient of peninsular Ontario thrusts far into the heart of the United States. In the east the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with the United Kingdom and France. In the west the broad arc of land between

* Prepared by the Geographical Branch, Department of Mines and Technical Surveys, Ottawa.

Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides the shortest crossings of the North Pacific Ocean between continental North America and the Far East. Canada thus stands at the crossroads of contacts with the principal powers and some of the most populous areas of the world.

In size, Canada is the largest country in the Western Hemisphere and the second largest country in the world. Its area of 3,851,113 sq. miles may be compared with that of the Union of Soviet Socialist Republics, 8,649,821 sq. miles,* the United States of America (including Alaska), 3,608,790 sq. miles,* and Brazil, 3,287,204 sq. miles.* It is more than forty times the size of the United Kingdom and eighteen times that of France. The immense size of the country, while encompassing many resources and seeming to afford much scope for settlement, imposes its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an arctic climate. The developed portion is probably not more than one-third of the total; the occupied farm land is only 7.7 p.c. and the currently accessible productive forested land 18.1 p.c. of the total. The population of Canada, estimated at 16,589,000 on June 1, 1957, may be compared with 165,271,000† for the United States (1955) and with 58,456,000† for Brazil (1955).

Section 1.—Physical Geography

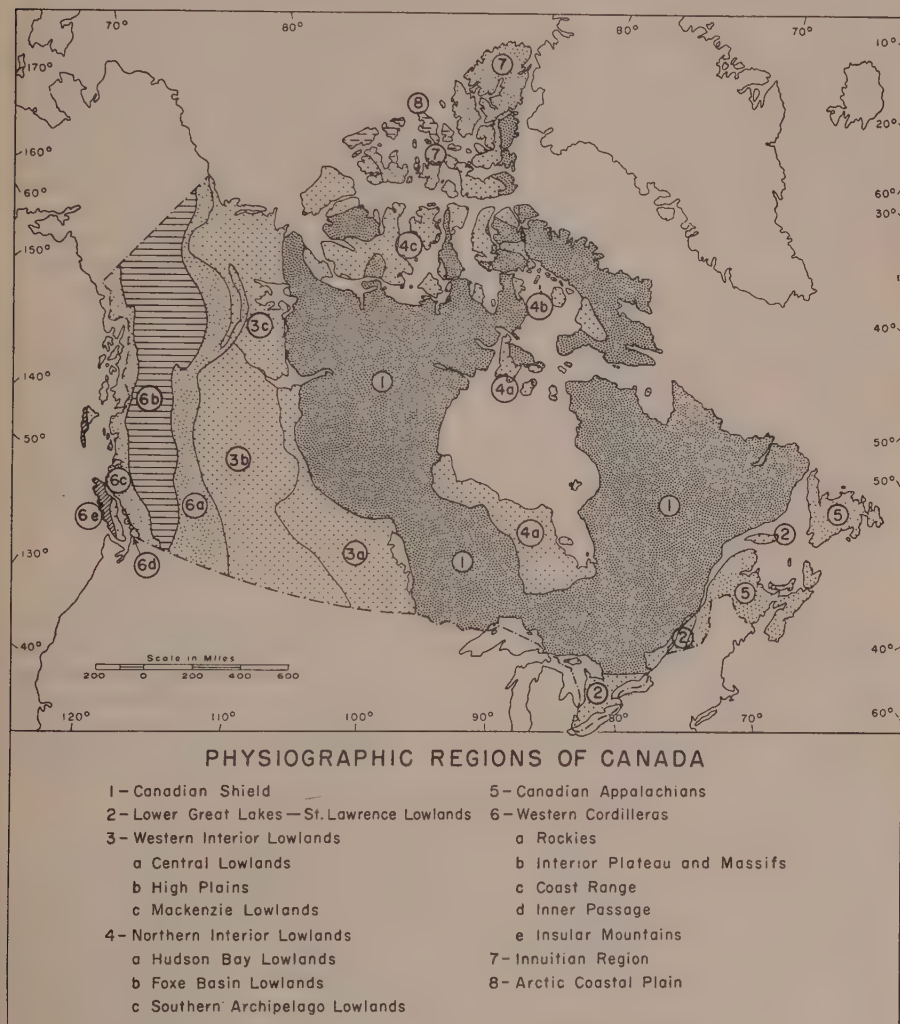

Subsection 1.—Physiographic Regions

Canada includes each of the major characteristic structures of the North American continent with the exception of the Atlantic coastal plain. Structure tends to dominate relief to a remarkable degree even though its effects have been modified by glacial and river erosion or deposition. Consequently, structural regions have become main physiographic divisions. Basically Canada consists of a central rocky upland, or shield, sloping down to flanking basins filled with sedimentary strata and rising again at the margins to mountains of folded rocks, interspersed with igneous intrusions.

* United Nations Statistical Yearbook 1956.

† United Nations Population and Vital Statistics Reports, January 1957.

Eight physiographic regions dominate the country: (1) The Canadian Shield; (2) the Lower Great Lakes-St. Lawrence Lowlands; (3) the Western Interior Lowlands of the Prairies and the Mackenzie basin; (4) the Northern Interior Lowlands of Hudson Bay and the southern Arctic Archipelago; (5) the Canadian Appalachians; (6) the Western Cordilleras; (7) the Arctic ranges, or Innuitian; and (8) the Arctic Coastal Plain.

The Canadian Shield.—The Canadian Shield, covering an area of about 1,850,000 sq. miles, or nearly one-half the country, is the core of the continent. Broad in the north, between Davis Strait and the Mackenzie basin, it tapers towards its southern extremity in Minnesota. Its eastern edge is tilted up to present the Torngat Mountains of Labrador and the mountains of Baffin Island, with heights of over 5,000 feet. The southern and western sides form much lower uplands, of from 600 to 1,200 feet. They are broken by faults and

end in a zone of lake-filled basins including the Great Lakes, Winnipeg, Athabasca, Great Slave and Great Bear Lakes. The north consists of a series of low prongs, like the Melville and Boothia peninsulas, flanked by channels and islands. The centre of the Shield has been depressed and is occupied by Hudson Bay and its arms and outlets. The whole makes up a knobby, rocky plateau with old worn-down mountains above and enclosed plains beneath its general level.

The rocks of the Shield comprise two series, the Archæan and Proterozoic, including very ancient sedimentaries, together with igneous intrusions and metamorphic belts. The Archæan rocks are dominantly crystalline in the form of massive domes of from 1,200 to 1,400 feet high; they also embrace small sedimentary depressions. The Proterozoic rocks are mainly sedimentary and often lie in wide, shallow basins, 600 feet or more below the surrounding uplands. The more important of these are the Coppermine, Thelon, Athabasca and Dubawnt plains in the northwest, the Port Arthur lowland in the southwest, and the Mistassini plain and Ungava trough in the east. The Proterozoics were frequently squeezed up into ranges of fold mountains such as the Bear and Snare Mountains south of Great Bear Lake, the Slave and Nonacho Mountains south of Great Slave Lake, the Athabasca and Tazin Mountains east of Lake Athabasca, the Cuyuna and Penokean Mountains to the north and south of Lake Superior, the La Cloche Mountains north of Lake Huron and the Ungava Mountains in central Labrador.

The Shield may be subdivided on the basis of changes in the trend of rocks from place to place. In the south there lies the Grenville province with an over-all trend from southwest to northeast. North of a line through Lake Nipissing and Lake Mistassini occurs the Superior province with a west-east trend. It extends north from Lake Superior to about the Nelson River west of Hudson Bay and Great Whale River east of the Bay. The Ungava province occupies the northeast, with a west-southwest to east-northeast trend. Its counterpart is the Churchill province between Lake Winnipeg and the Dubawnt plain, having a southwest to northeast trend. In the far northwest is the Slave province where the rocks trend from south-southwest to north-northeast.

The whole of the Shield has been glaciated. Current opinion favours Baffin Island and the high eastern rim of the Shield as the main source of ice; the ice sheets spread out, however, far to the west and south, pushing across to the Rockies practically to the confluence of the Mississippi and Ohio Rivers and to Long Island. The ice deepened pre-existing valleys, scooped out some of the softer plains, wore down ridges and spread quantities of debris. As it melted away it created huge frontal lakes such as the predecessors of the Great Lakes, of the western lakes, and of the various 'clay belts' that now occupy hollows in the Shield. These lakes left behind extremely valuable lacustrine clays and beach gravels that have given the Shield the few agricultural areas it possesses. Post-glacial rivers, too, have benefited from the ice-cut or ice-ponded lakes, obtaining a large volume and a steady flow that make them ideal for hydro-electric development.

Shield structures the world over are peculiarly favourable to metal formation. Thus the Canadian Shield is Canada's principal source of iron, gold, nickel and radioactive metals and has also important supplies of copper, lead and zinc. Recent strides made in the exploitation of these mineral deposits as well as in the development of the vast forest and water power resources of the area have attracted settlement as never before. The new communities afford important markets for the agricultural produce of the western provinces and the manufactured goods of Ontario and Quebec, and thus the resources of the Shield constitute a factor in cementing together the eastern and western portions of the country. In the north, however, climatic conditions and inaccessibility have prevented extensive colonization.

The Lower Great Lakes-St. Lawrence Lowlands.—Flanking the Shield to the south and southeast the Lowlands consist of gently dipping or almost flat strata of Palæozoic sediments. Laid down in epi-continental seas in beds of mud (shale), sand and limestone, these strata produced a belted lowland with distinctive though subdued relief. The belts

of shale form low vales and the belts of limestone stand up as prominent scarps, the most famous of which is the Niagara Escarpment. The whole region was greatly modified by ice and, as the ice melted, depressions became lakes. The glacial lakes were much larger than those of today. Glacial Lake Algonquin covered the three upper Great Lakes together with Lakes Nipigon and Nipissing and flowed out to sea by the Mattawa-Ottawa and the Trent river valleys. When it receded it left behind important plains at Port Arthur, Nipigon and North Bay. Lake Erie developed from a succession of glacial lakes at different levels and consequently is surrounded by a number of sandy deltaic deposits, beach ridges and lacustrine flats, each of which has its own role in diversifying agriculture. Lake Ontario is the successor to Lake Iroquois and is surrounded by the old Iroquois beach which stands out everywhere and provides sites for roads and settlements. Farther east, the lower Ottawa and St. Lawrence valleys were invaded first by glacial Lake Champlain and then by the Champlain Sea. Here also, deltaic sands, beach gravels and lake-bottom clays play a pronounced part in agriculture and in the distribution of settlement. The ice left large terminal or inter-lobate moraines, the most significant of which are the Horseshoe moraine in southwest Ontario and the Oak Ridge moraine in central Ontario. These provide catchment basins for many small rivers.

The Lowlands may be divided into four sub-regions: Southwest Ontario, west of the Niagara Escarpment; Central Ontario, between the Escarpment and the Rideau Hills [these are a spur of the Shield (the Frontenac axis) between the Algonquins and the Adirondacks]; Eastern Ontario and the Montreal Plain; and the estuarine plains of Quebec and Anticosti Island.

The Lowlands are poorly endowed with fuel and other mineral resources, except for the natural gas fields and the salt deposits of southwest Ontario. However, the area is the most southerly part of Canada, has a very favourable climate and good grey-brown soils, and is therefore very productive. The immense water power potential of the Niagara and St. Lawrence Rivers and of the rivers plunging down from the Shield and the Appalachians is a major asset. Although the Lowlands comprise Canada's smallest region, they support nearly two-thirds of the country's population.

The Western Interior (Prairies and Mackenzie) Lowlands.—The largest plains in Canada, the Western Interior Lowlands occupy a truly continental depression between the Shield and the Rocky Mountains, long the site of shallow seas that expanded and contracted from Palæozoic to Cenozoic times. Sedimentary rocks laid down by rivers and by these seas in almost horizontal strata dominate the scene. They have since been attacked by differential erosion, the softer beds being worked down into basins and the harder beds standing up as intervening scarps.

The prairies have thus come to occupy three levels or steps. The lowest consists of the Manitoba plain, of Palæozoic rocks, dipping gently away from the Shield. This step is at an elevation of from 600 to 900 feet. Much of it is floored by fertile glacial clays and beach ridges left by glacial Lake Agassiz that once filled the Red and Assiniboine Rivers and the flats around Lakes Winnipeg, Manitoba and Winnipegosis. It gives way, westward, to the great Cretaceous escarpment known as the Manitoba Scarp. This scarp has been cut into deeply by the Assiniboine, Swan and Saskatchewan Rivers and really exists as a series of uplands of from 1,600 to 2,600 feet high called the Turtle, Riding, Duck, Porcupine and Pasquia Mountains.

The second prairie step stretches westward from this scarp at a mean altitude of 2,000 feet. It too was glaciated. When the ice retreated large glacial lakes were left, known as Lakes Souris, Regina and Saskatoon. Lake-bed deposits today form some of the flattest and most fertile areas. Elsewhere the ground is rather hummocky with innumerable sloughs. Another great scarp occurs west of Weyburn and Moose Jaw; it is a continuation of the Missouri Coteau, a well-marked feature in the United States, and is divided by great re-entrants into individual sectors, the most important of which are Wood and Bear Mountains.

West of the Coteau extends the third and highest prairie step with an altitude of between 3,000 and 4,300 feet. In the south it is quite hilly, where the Cypress Hills rise above it to shed waters into the Saskatchewan or Missouri basins. Covered with till, it has generally a slightly rolling surface suited particularly to ranching. Old glacial lakes along the Bow and Oldman Rivers provide excellent agricultural areas, as do outwash plains in front of the moraines that occur between Calgary and Edmonton.

The three prairie steps are united by the great arms of the Saskatchewan River flowing from the Rockies to Lake Winnipeg, and also by the soil zones which form broad west-east ares. Railways, roads and crop belts accentuate these natural ties. So do the coal, oil and gas fields. The prairies are underlain by Canada's chief fuel-bearing rocks. From Estevan through Drumheller to Macleod are a succession of coal fields. Southwest Manitoba and south Saskatchewan lie on the edge of the Williston oil basin. Western Alberta is the site of another large oil field. Gas is important in southern Alberta and in the Peace River district of the northwest.

A low divide of moraine-capped hills separates the prairies from the Mackenzie Lowland. This huge area, 1,100 miles long and up to 300 miles wide, consists of an asymmetrical plain, tilted from plateau-like levels in the west, at 4,000 feet, to basin-like stretches in the east, at 500 feet. The main channel follows the eastern depression. Long, rapid, deeply entrenched tributaries, such as the Athabasca, Peace, Liard, Arctic Red and Peel Rivers, come in from the west. Where the Lowland meets the Shield, a few pronounced hollows occur filled with great lakes. These were much larger during glacial times and consequently glacial-lake beds are exposed all around Lesser Slave, Athabasca, Great Slave and Great Bear Lakes; the more southerly of these areas provide reasonably good agricultural or forest lands. The Athabasca and Peace Rivers, emptying into glacial Lake Athabasca, formed extensive sand deltas; an even larger delta of this type is the one formed by the Slave River at Great Slave Lake. The Mackenzie delta is one of the largest on the continent.

Though the southern part of the Lowland, particularly in the Peace River district, forms good agricultural land, the northern part is climatically unsuited to commercial farming. The lead and zinc deposits at Pine Point and the oil field at Norman Wells, together with oil potential in the middle Mackenzie and Peel basins, are valuable northern assets.

The Northern Interior (Hudson Bay and Inner Arctic) Lowlands.—Paleozoic sedimentaries, they dip gently north from the main height of land between the Hudson Bay and Great Lakes drainage basins. They are thus a parallel structure to that of the St. Lawrence Lowlands, but there the likeness ends. In the past, marine transgression buried the northern Paleozoics, masking the effects of the underlying rocks. Much of the land, then, consists of great stretches of old marine beds sloping down from one raised beach to the other. Through these thrust occasional masses of drumlins and periodic outcrops of rock. Moreover, the climate is arctic and therefore vegetation is limited to grass, moss and lichen, and soil development is inhibited. Thus these northern plains are of little economic value except for some hunting and trapping.

The plains may be divided into four sub-regions: the coast plain of Hudson Bay, between Churchill and Moosonee; the southern part of Southampton Island, and Coats and Mansel Islands; most of the islands and parts of the coast of Foxe Basin; and parts of the southern Arctic Archipelago, including northwest Baffin, Somerset, Prince of Wales, eastern Victoria and eastern Banks Islands.

The Canadian Appalachians.—The Canadian Appalachians are a part of the great range of fold mountains extending from Newfoundland through the Maritimes and south-east Quebec to Tennessee and beyond the Mississippi to Arkansas. They were thrown up chiefly in Silurian, Devonian and Carboniferous times, thus involving Paleozoic strata. In those times, two long geosynclines ran through the region—the Laurentian and the Acadian. The former extended from northwest Newfoundland through the Gaspé Peninsula and southeast Quebec, and gave birth to the Long Range of Newfoundland and the Shickshock

and Notre Dame Mountains of Quebec. The Acadian geosyncline reached from southeast Newfoundland through Nova Scotia and eastern New Brunswick and was responsible for the uplands of those regions.

Between the mountain ranges are wide basins floored by sandstone, notably those of Prince Edward Island, Minas basin, and the Annapolis and St. John Valleys. The whole complex mass of mountains was planed down by prolonged erosion so that elevation is moderate, not more than 4,200 feet, and outlines are long and smooth with few sharp crests. The name of the highest area, Tabletop Mountain in the Shickshocks, is indicative of the subdued topography. Subsequently the region was glaciated and small glacial lakes, valley moraines and outwash fans play a significant role in scenery and occupation. Raised beaches to a height of 250 feet line many stretches of coast and are marked by roads and settlements. The rivers have been strongly rejuvenated and are lined with terraces particularly valuable for cultivation. Intrusions of granite and trap are frequent. The trap sill forming North Mountain in Nova Scotia encloses the famous Annapolis Valley.

Many of the igneous intrusions are associated with metals, as at Bathurst in New Brunswick where large deposits of lead and zinc are found. At one time gold was mined about the intrusions in Nova Scotia. A large deposit of iron at Wabana and deposits of lead and zinc at Buchans, Newfoundland, are important. On the edge of the region, in the Eastern Townships of Quebec, is the world's largest supply of asbestos and significant deposits of coal occur in Cape Breton Island, Nova Scotia, and on the coasts of Northumberland Sound in New Brunswick. Thus, though the fertile plains of the sheltered basins included in the fold belts have long made the region predominantly agricultural, the mineral resources are the basis for limited but thriving industries. Lumbering on forested hills and fishing in the bays of a much-indented coast are also important activities of the region.

The Western Cordilleras.—The Western Cordilleras consist of a belt of lofty ranges, deep troughs and broad plateaux extending for 1,400 miles through the Yukon Territory and British Columbia and having a width of up to 500 miles. The Cordilleras are characterized by intensive folding, elevation and faulting, the intrusion of enormous batholiths—igneous masses that warped-up overlying sedimentaries—and by volcanic activity. They are made up, therefore, of folded sedimentaries, igneous masses and metamorphic rocks. Although older rocks are exposed, Mesozoic and Cenozoic rocks predominate. In Precambrian times the geosynclines formed in which the Yukon group of sediments in Yukon Territory and the Shuswap group in British Columbia were laid down. Later vast depressions occurred where sediments gathered that are now folded into the Purcells and southern Rockies. The accumulation of great depths of sediment, 20,000 feet or more thick, continued through Palæozoic into Mesozoic times. Then in Jurassic times violent volcanism, folding and the intrusion of granites occurred in the outer belts, throwing up the Coast and Selkirk Ranges. The Rocky Mountain system came into being during Cretaceous and Tertiary times.

The whole region was partly planed down and there is a frequent accordance of summit levels. However, subsequent uplift led to a renewed attack on the land by river and sea, and deeply entrenched rivers fringed by pronounced terraces are common. Glaciation has further deepened the valleys and eaten into the divides, leading to knife-like ridges and horn-shaped peaks. Eventual drowning of the coastal fringe made islands of outlying ridges and deep fjords of coastal troughs, producing a highly articulated shore line.

The Cordilleras may be divided into five structures—the Rocky Mountain system, the interior basins and plateaux, the Coast Range, the Inner Passage along the coast, and the outer insular arc.

The Rocky Mountain system begins, in Canada, with the Richardson Range of moderate elevation, heavily glaciated and then dissected by rivers on its flanks but with no marked peaks. Southwards is the Peel Plateau of flat sedimentary rocks, eaten into isolated tablelands by river action. Farther south occur the Mackenzie Mountains, with more intensively folded ridges and ice-serrated peaks rising to 9,000 feet. These are separated

from the Rockies proper by the pronounced gap of the Liard River. The Rockies are composed partly of highly folded beds and partly of nearly flat beds that have been uplifted to great heights. They are split by faults and have been attacked by rivers so successfully as to give way to low passes such as Finlay Forks, Pine, Yellowhead, Kicking Horse and Crownest. Three clusters of peaks occur, dominated by Churchill Peak (10,500 feet) in the north, Mount Robson (12,972 feet) in the centre and Mount Assiniboine (11,870 feet) in the south.

The interior basins and plateaux are considerably lower than the Rocky or Coast Ranges. On the east they begin at a well-marked break called, in part of its course, the Rocky Mountain Trench. This carries the headwaters of the Liard, Peace, Fraser and Columbia Rivers. The Yukon Plateau in the north, lying between Dawson and Selwyn Ranges, has flat summits separated by deeply cut rivers. Southward it passes to the Cassiar Mountains, strongly intruded with igneous masses. Thence the Stikine Plateau runs as far as the Skeena-Hazelton Ranges, which are again largely of intruded igneous rock. South of these is the Interior Upland of British Columbia, a wide area of flat-topped uplands from 3,000 to 4,000 feet high with deep, many-terraced rivers flowing between. The gorge of the Fraser River is one of the most spectacular in Canada. The river basins afford considerable fertile land for cultivation and the plateau tops provide excellent pasture. Toward the United States border are the Columbia Mountains, a complex system of folded and intruded rocks and fault-line depressions rich in minerals and with productive river and lake terraces.

The Coast Range has the highest peaks in Canada—Mount Logan (19,850 feet) in the Yukon Territory and Mount Waddington (13,260 feet) in British Columbia. The Canadian portion starts in the high, partly volcanic, partly folded mass of peaks known as the St. Elias Range. Here active glaciers have cut deep troughs and sharp ridges. South, the Coast Range has some large batholiths. The crystalline rocks have frequently become exposed by the very active erosion caused by heavy precipitation from oceanic airs. Consequently most of the Coast Range, despite its massive structure, consists of a saw-like series of sharp peaks and ridges.

The Inner Passage along the coast comprises the Georgia, Queen Charlotte and Hecate Straits. It is a continuation northward of the string of great depressions occurring in the United States, such as the Sacramento and Willamette Valleys, but it became drowned by the sea and there is little plain left. The mainland and island coasts rise very steeply to lofty mountains. The Passage has a very large number of arms, most of which are ice-cut fjords or fault depressions giving a highly indented shore. The outer insular arc is made up of outlying ridges that have become partially submerged under the sea, forming a number of hilly or mountainous islands enclosing small fertile basins. The Queen Charlotte group in the north and Vancouver Island in the south are the most important.

The Western Cordilleras are very complex in structure and consequently have a wide range of resources. In some of the narrow plains, sedimentary rocks are underlain by coal fields as at Fernie and Nanaimo in British Columbia and at Carmacks in the Yukon Territory. Oil is purported to lie under plateau sections in the Yukon. Gold made the Cariboo district of British Columbia and the Klondike area of Yukon Territory world-famous in their time but of greater importance are the large mineral masses usually associated with igneous intrusions, of which copper, lead and zinc are the most significant. To this wealth of metals, the Cordilleras add vast hydro-electric potential and dense, extensive coniferous forests. Agriculture is limited except on the Fraser delta and in one or two of the interior trenches.

The Innuitian Region and the Arctic Coastal Plain.—The Innuitian Region is an extensive belt of fold mountains 800 miles long, involving rocks from Silurian to Cretaceous times. Folding started in Appalachian times in Silurian and Devonian beds. It overlapped that of the Cordilleras in Cretaceous and Cenozoic beds. Two sub-regions exist—the Ellesmere Island system and the Parry Islands folded belt. The Ellesmere Island system seems to indicate a double orogeny, in Silurian and then again in Cretaceous times.

The results have been fairly high ranges of from 6,000 to 10,000 feet where folding and thrust faulting are much in evidence. The trends of the folds are from southwest to northeast. The Parry Islands fold belt, trending more nearly west-east, consists of typical Appalachian-like folds in canoe-shaped structures about 2,000 feet high which include large tracts of horizontal strata.

Farther north, in the Sverdrup Islands and in those discovered by Stefansson, the strata form a coastal plain gently sloping towards the Arctic Ocean. The beds are much disturbed locally by piercement domes which are frequently the sites of the accumulation of pools of oil. However, geological discovery has not yet proceeded to the extent of determining the mineral wealth of the area. The climate is so severe that it precludes any possibility of agricultural development and has limited even hunting and fishing activities.

Subsection 2.—Inland Waters

The inland waters of Canada (not including salt water areas that are a part of Canada) are extensive, constituting over 7 p.c. of the total area of the country. They are best studied by segregating the main drainage basins as shown in Table 2.

2.—Drainage Basins

Drainage Basin	Area Drained ¹ sq. miles	Drainage Basin	Area Drained ¹ sq. miles
Atlantic Basin	695,370^r	Arctic Basin (mainland)	944,280

Northwest Territories.....	181,450	Saskatchewan.....	6,060

¹ Areas are approximate and are exclusive of those portions of the basins of all rivers that lie in United States territory, and of areas of interior drainage.

During the early period of exploration and development the waterways of Canada were the sole means of access to and travel in the interior. This function is still of importance to much of the country, particularly in the north where most traffic moves by water or by air. In the settled areas, however, the construction of roads and railways has reduced the role of the waterways as transportation routes but they have assumed other functions. Some, particularly in the Canadian Shield area and the Cordilleran region, have been harnessed for the production of electric power. Others, mainly in southern Alberta and Saskatchewan, have been dammed to provide water for irrigation purposes. In Eastern Canada many of the rivers have been controlled in an over-all program of flood prevention and conservation of renewable resources or to provide dependable supplies of water for industrial and domestic purposes.

In Eastern Canada, the Great Lakes and St. Lawrence drainage basin dominates all others and forms an unequalled system of navigable inland waterways through a region rich in natural and industrial resources. From Duluth, Minn., at the head of Lake Superior

to Belle Isle at the entrance to the Gulf of St. Lawrence the distance is 2,280 miles. The St. Lawrence waterway and its tributaries, most of which have lakes available for reser-voiring, have very large developed and potential power resources.

The greater part of Canada drains into Hudson Bay and the Arctic Ocean; the Nelson River drainage is exceptional in running *through* the most arable and the most settled part of Western Canada but otherwise the rivers of the West, east of the Rockies, run *away* from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie River, which drains Great Slave Lake, is, with its headwaters, the longest river in Canada (2,635 miles) and its valley constitutes the natural transportation route through the Northwest Territories to the Arctic Ocean. From Fort Smith on the Slave River large river boats run without any obstruction to Aklavik on the delta of the Mackenzie, a distance of 1,292 miles. Table 3 gives the lengths of the principal rivers with their tributaries classified according to the four major drainage basins.

3.—Lengths of Principal Rivers and Their Tributaries

NOTE.—In this table the tributaries and sub-tributaries are indicated by indention of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

Drainage Basin and River	Length	Drainage Basin and River	Length

The outstanding lakes of Canada are the Great Lakes, though only parts of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table 4.

4.—Elevations, Areas and Depths of the Great Lakes

Lake	Elevation Above Sea-level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary

There are no tides in the Great Lakes although considerable variation in water levels is occasioned by strong winds.

Other large lakes of Canada, ranging in area from 9,000 to 12,000 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of 5,294 sq. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

5.—Elevations and Areas of Principal Lakes by Province

NOTE.—Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water, LW low water, and N normal level.

Subsection 3.—Coastal Waters

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated milages:—

Mainland—

Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

Islands—

Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada. Further details are given in the 1947 Year Book, pp. 3-12.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged Continental Shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This Shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the Shelf, known as the Continental Shoulder, is of varying depths of from 100 to 200 fathoms before the Shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic Continental Shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the Shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Arctic.—The submerged plateau protruding from the northern coast of North America is a major part of the Great Continental (or Polar) Shelf surrounding the Arctic Ocean on which lie all the Arctic islands of Canada, Iceland, Greenland and most of those of Europe and Asia. This Shelf develops its maximum width on the 80th meridian of west longitude where it extends from the south of James Bay to the north coast of Ellesmere Island, a distance of over 2,000 miles.

The floor topography of this continental margin is largely unexplored but sufficient has been charted to indicate an abrupt break at the northern oceanward edge. This steep continental terrace borders the whole western side of the Canadian Archipelago and constitutes one of the most striking and significant features of the Polar regions. From this declivity, deep well-developed troughs cut by glaciers enter between the western group of islands. A ridge across Davis Strait on which the depth is about 200 fathoms separates this basin from the open Atlantic.

Hudson Bay and Hudson Strait bite deeply into the continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet strewn coast, the Continental Shelf extends from 50 to 100 sea miles to its oceanward limit where depths of

about 200 fathoms are found. There the sea floor drops rapidly to the Pacific Deep, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile respectively from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation.

Subsection 4.—Islands

The largest islands of Canada are in the north and all experience an Arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches 83°07'N. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north—lying north of the M'Clure Strait—Viscount Melville Sound—Barrow Strait—Lancaster Sound water passage—are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick and Anticosti Island and the Magdalen group included in the Province of Quebec are the chief islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

6.—Islands over 2,000 Square Miles in Area

Subsection 5.—Mountains and Other Heights

The predominant orographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level.

Section 2.—Main Physical and Economic Features of the Provinces

Politically Canada is divided into ten provinces and two territories. Each of the provinces is sovereign in its own sphere, to the extent set out in the British North America Act 1867 and its amendments, and as new provinces have been organized they have been granted political status equivalent to that of the original provinces. The Yukon and Northwest Territories, with their present boundaries, are administered by the Federal Government. The chief physical and economic features of each of the provinces and of the territories are described in the 1956 Canada Year Book at pp. 12-17. Details of resources and their development are given in later chapters of the present volume.

PART II.—LAND RESOURCES AND PUBLIC LANDS

Section 1.—Land Resources

Information currently available regarding Canada's vast land resources is shown in Table 1, where the land area is classified as occupied agricultural, forested and 'other' land, the latter including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. Soil surveys now under way by the Department of Agriculture will make it possible in the future to estimate the amount of arable land Canada possesses and, as provincial inventories are completed, more information will be available regarding land now non-forested but not productive in an agricultural sense. The Forestry Branch of the Department of Northern Affairs and National Resources estimates that about 46 p.c. of the land area of Canada is forested and, according to the Census of 1956, less than 8 p.c. is classed as occupied farm land. A great part of the 1,687,691 sq. miles of 'other' land is located in the Yukon and Northwest Territories which together have a land area of 1,458,784 sq. miles. The occupied farm land in these Territories is practically nil and the forested area is estimated at 275,800 sq. miles.

1.—Land Area classified as Occupied Agricultural or Forested, by Province

Note.—Figures for occupied agricultural land were obtained from the 1956 Census; areas of forested land were compiled by the Forestry Branch, Department of Northern Affairs and National Resources from estimates supplied by the Forest Service in each province and were released Mar. 11, 1957.

¹ Includes Gatineau Park (86 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under Federal jurisdiction but are not technically National Parks. ² Less than one square mile. ³ Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as National Parks.

⁴ Includes Wood Buffalo Park (13,675 sq. miles) which, although reserved by the Federal Government, is not administered as a National Park. ⁵ That part of Wood Buffalo Park in N.W.T. ⁶ A forest experiment area of 25 sq. miles is included in National Parks figure.

⁷ Three provincial forest reserves in Manitoba with a total area of 3,094 sq. miles are considered as Provincial Parks though not set up as such; duplication is omitted from totals.

Subsection 1.—Federal Public Lands

Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, Ordnance and Admiralty Lands, National Parks and National Historic Sites, Forest Experiment Stations, Experimental Farms, Indian reserves and in general all public lands held by the several Departments of the Federal Government for various purposes connected with federal administration. These lands are administered under the Territorial Lands Act (R.S.C. 1952, c. 263) and the Public Lands Grants Act (R.S.C. 1952, c. 224) which became effective June 1, 1950, and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 70 sq. miles of a total area of 1,511,979 sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources.

Subsection 2.—Provincial Public Lands

Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the Provincial Governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan, Alberta and of sections of British Columbia to the respective governments and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 125 sq. miles under federal administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXIX, under "Lands".)

Subsection 3.—National and Provincial Parks

The future of Canada in the field of outdoor recreation is being wisely provided for by the establishment of National and Provincial Parks. Many of these Parks are easily accessible by highway, rail or air and offer every type of accommodation from camping facilities to cosy cabins and palatial hotels. A wide variety of summer and winter recreational attractions are available in mountain, lakeland, woodland and seaside areas of exceptional scenic beauty.

The extent of the Park areas in each province is given in Table 2 on p. 19; location, year of establishment, area, and main characteristics of each National Park are given in Table 3, which is followed by a brief description of the Provincial Parks.

National Parks.—From 1885, when the first National Park was established around the mineral hot springs at Banff, Alta., until 1956, 30 areas covering more than 29,000 sq. miles have been set aside as National Parks.

These parks are maintained by the Federal Government for the protection of their flora, fauna and natural phenomena, for the preservation of their scenic beauty and interest and, in some, the marking of their historical significance in the building of the nation. They are supervised by the National Parks Branch, Department of Northern Affairs and National Resources and are developed and maintained in such a manner as to provide perpetual inspiration, education and healthful recreation for present and future generations.

The National Parks are Canada's greatest single tourist attraction. Accommodation in privately owned hotels, bungalow cabins, chalets, lodges and cottages is available and modern cabins have been built in several of the parks by the National Parks Administration to afford low rental accommodation to park visitors. Recreational facilities include heated outdoor swimming pools with dressing-room buildings; equipped camp grounds, some with trailer-park facilities; golf courses in superb scenic settings; tennis courts; bowling greens; well equipped children's playgrounds; athletic fields; horseshoe pitches; outdoor checker-boards; and, in some of the parks, amphitheatres where plays, concerts and film shows are held in the open. For winter sports there are downhill and slalom ski courses, ski jumps, ski tows and, at Banff, a chairlift.

A park warden service protects the forests and wildlife and maintains constant vigilance for the safety and comfort of visitors. Stocking and transfer of game fish are carried out extensively and successfully in order to improve angling opportunities in park waters; fish hatcheries are operated in three of the mountain National Parks. The Scientific Management of Game Fish in Canada's National Parks is the subject of a special article on pp. 35-39 of the 1956 Year Book. Two of the National Parks are largely big-game preserves where herds of buffalo and other animals find sanctuary.

In addition to the scenic, recreational and wild animal parks Canada has 12 national historic parks. The National Parks and Historic Sites Service of the Department of Northern Affairs and National Resources is also responsible for the marking, preservation and restoration of places of great historic interest in Canada. More than 500 such sites have been marked on the recommendation of the Historic Sites and Monuments Board of Canada.

3.—Location, Year Established, Area and Characteristics of National Parks

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
Scenic and Recreational Parks				
Banff.....	Western Alberta, on east slope of Rockies.	1885	2,564.0	Magnificent scenic recreational area; noted resorts, Banff and Lake Louise. Mineral hot springs; summer and winter sports. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Glacier.....	Southeastern British Columbia, on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, glaciers and forests. Accessible by rail only. Climbing, skiing, camping.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	204.0	Canadian section, Waterton-Glacier International Peace Park. Mountain playground with spectacular peaks and beautiful lakes. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Jasper.....	Western Alberta, on east slope of Rockies.	1907	4,200.0	Mountain playground and noted wildlife sanctuary. Majestic peaks, ice fields, beautiful lakes and famous resort, Jasper. Mineral hot springs, summer and winter sports. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.

3.—Location, Year Established, Area and Characteristics of National Parks—continued

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
Scenic and Recreational Parks —concluded				
Mount Revelstoke.....	Southeastern British Columbia, on west slope of Selkirk.	1914	100.0	Rolling mountain-top plateau. Colourful alpine meadows. Accessible by rail and highway. Summer accommodation in Park; all-year accommodation in town of Revelstoke. Championship ski runs and ski jump. Equipped camp grounds.
St. Lawrence Islands...	In St. Lawrence River between Morrisburg and Kingston, Ont.	1914	189.4 (acres)	Mainland area and 13 islands among Thousand Islands. Recreational and camping area. Accessible by highway; by boat from nearby mainland points.
Point Pelee.....	Southern Ontario, on Lake Erie.	1918	6.0	Recreational area. Remarkable beaches, southern flora. Resting place for migratory birds. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Kootenay.....	Southeastern British Columbia, on west slope of Rockies.	1920	543.0	Encloses Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Summer playground and recreational area. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Riding Mountain.....	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148	Playground and wildlife sanctuary on summit of escarpment. Fine lakes. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Georgian Bay Islands..	In Georgian Bay, north of Midland, Ont.	1929	5.4	Recreational and camping area. Unique pillars on Flowerpot Island. Accessible by boat from nearby mainland points. Equipped camp grounds and annual youth camps on Beausoleil Island.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	390.0	Rugged Atlantic coast line with mountain background. Fine seascapes. Recreational opportunities. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Prince Edward Island..	North shore of Prince Edward Island.	1937	7.0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Recreational area, fine bathing beaches. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Delightful recreational area. Forested region, wildlife sanctuary, rugged terrain. Bungalow cabin accommodation. Equipped camp grounds.
Terra Nova.....	On Bonavista Bay, Newfoundland, 150 miles north of St. John's.	1957	156.0	Newly acquired maritime area as yet undeveloped; rocky headlands, wooded areas with abundant wildlife, off-shore and freshwater fishing.

3.—Location, Year Established, Area and Characteristics of National Parks—concluded

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
Wild Animal Parks				
Elk Island.....	Central Alberta, near Edmonton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular recreational area. Accessible by highway. Bungalow cabin accommodation and equipped camp grounds.
Wood Buffalo ¹	Partly in Alberta and partly in Northwest Territories, between Athabasca and Slave Rivers.	1922	17,300.0	Immense region of forests and open plains. Home of largest remaining herd of bison on the Continent. Other wildlife abundant.
Historic Parks				
Fort Anne.....	Nova Scotia, at Annapolis Royal.	1917	acres 31.0	Site of early Acadian settlement. Museum and well preserved earthworks.
Fort Beausejour.....	New Brunswick, near Sackville.	1926	81.3	Site of French fort erected in middle of 18th century. Museum.
Fortress of Louisbourg	Cape Breton Island, N.S., 25 miles from Sydney.	1941	339.5	Ruins of walled city erected by the French, 1720-40. Interesting excavations. Museum.
Port Royal.....	Port Royal, N.S., 8 miles from Annapolis Royal.	1941	20.5	Restoration of "Habitation" or first fort built in 1605 by Champlain, DeMonts and Poutrincourt.
Fort Chambly.....	Chambly, Que.....	1941	2.5	French fort on Richelieu River, first built in 1665. Museum.
Fort Lennox.....	Ile-aux-Noix, Que., near St. Johns.	1941	210.0	Site of early French fort built in 1759.
Fort Wellington.....	Prescott, Ont.....	1941	8.5	Defence post built 1812-13. Museum.
Fort Malden.....	Amherstburg, Ont.....	1941	5.0	Site of defence post built 1797-99. Museums.
Fort Prince of Wales...	Northern Manitoba, near Churchill.	1941	50.0	Ruins of fort built 1733-71 to secure control of Hudson Bay for England.
Lower Fort Garry....	Manitoba, 20 miles north of Winnipeg.	1951	12.8	Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839.
Fort Battleford.....	Saskatchewan, 4 miles south of North Battleford.	1951	36.7	North West Mounted Police post built in 1876.
Woodside.....	Kitchener, Ont.....	1954	11.0	Boyhood home of the Rt. Hon. William Lyon MacKenzie King, former Prime Minister of Canada.
Halifax Citadel.....	Halifax, N.S.....	1956	36.9	Defence post constructed 1828-42. Museums

¹Administered by the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources.

Provincial Parks.—In addition to the National Parks described above, most of the Provincial Governments have established parks within their boundaries. These parks, in the same way as the National Parks, are areas of special scenic or other interest, preserved and maintained for the benefit of the public but many of them are still undeveloped. A detailed list of Provincial Parks, showing location, year established, area and a short description of each, is given in the 1954 Year Book, pp. 26-30. The more important parks in each province are mentioned briefly in the following outline.

Newfoundland.—There are 48 sq. miles of provincial park area in Newfoundland. The 42 sq. miles on the west coast established as Serpentine Park is undeveloped, but the 6 sq. miles recently taken over on the Upper Humber River is now under development. Surveys are being conducted with a view to setting aside about 200 acres of Crown land throughout the Province to be used as small parks and picnic sites ranging in size from half-acre to fifty-acre lots.

Quebec.—The Province of Quebec has established five Provincial Parks and eight Fish and Game Reserves. Four of the park areas are quite extensive. La Vérendrye Park, 140 miles northwest of Montreal, has an area of 4,746 sq. miles; Laurentide Park, 30 miles north of Quebec City, has 3,612 sq. miles; Mont Tremblant, 80 miles north of Montreal, 1,223 sq. miles; and Gaspesian Park, Gaspé Peninsula, 514 sq. miles. Mount Orford Park, situated 15 miles west of Sherbrooke, has an area of 16 sq. miles.

The Fish and Game Reserves together occupy more than 30,000 sq. miles. The Chibougamau Reserve and the Mistassini Reserve, both northwest of Lake St. John, cover 3,400 sq. miles and 5,300 sq. miles respectively; the Kipawa Reserve in the Témiscamingue district, 1,000 sq. miles; and the Shickshock Reserve adjoining Gaspesian Park, 314 sq. miles. The Petite Cascapédia, 305 sq. miles, and the Port Daniel, 30 sq. miles, reserved for salmon and trout fishing, both lie along the Bay of Chaleur in Gaspé Peninsula, while the Mingan Reserve, largest of them all with an area of 21,000 sq. miles, lies on the north shore of the St. Lawrence River in Saguenay County.

These parks and reserves are wilderness areas of great scenic interest—for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mount Orford, excellent fishing may be found and most of them have been organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant is a famous resort area in both summer and winter and is easily reached by highway the year round from Montreal. The Department of Game and Fisheries administers the parks and reserves, and also four salmon streams which are open to anglers.

Ontario.—The Provincial Park program in Ontario has been greatly expanded since 1955. Six areas under development at the end of that year have been increased to 110 parks and park reserves by mid-1957. In 83 of these at least minor improvements have been effected and 67 are supplied with caretaker services and with camping and picnic facilities. The four largest parks—Algonquin, Quetico, Superior and Sibley—together have an area of nearly 4,700 sq. miles. Algonquin, 141 miles north of Toronto and 105 miles west of Ottawa, was the first to be established and is the best known. It is well provided with commercial camps for children and adults, easily accessible by road, but the present administrative policy is to encourage the establishment of commercial recreation facilities on the park fringes and to return the park itself to its natural condition. The interiors of Quetico and Superior Parks are also being retained as wilderness areas with fringe development. Quetico Park is accessible by road through the recently developed French Lake campsite, and by water; an extension to Highway No. 17 northward from Sault Ste. Marie will give access to Superior Park; and Sibley Park may also be reached by road from Highway 17 eastward from Port Arthur.

The parks are administered by the Parks Branch of the Department of Lands and Forests, Toronto, from which detailed information is available in brochure form.

Manitoba.—Three forest reserve areas in Manitoba may be considered as Provincial Parks, although they are not set up as such—Whiteshell Forest Reserve (1,088 sq. miles), Cormorant Forest Reserve (580 sq. miles) and Duck Mountain Forest Reserve (1,426 sq. miles). In addition there are eleven areas including the Northern Recreational Area, Amaranth Beach, Lynch Point, Pelican Lake, Rock Lake, Killarney, Seven Sisters, Pine Falls, Beaver Creek, Wallace Lake and Bird Lake, which make up a total of 950 sq. miles of new parks and recreational areas established up to 1957.

Saskatchewan.—Saskatchewan has ten Provincial Parks with a total area of about 1,600 sq. miles. Cypress Hills, Duck Mountain, Greenwater Lake, Moose Mountain, and Valley Centre are operated as summer resorts with chalet, lodge, cabin and trailer accommodation, and camping and picnic facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, horseback riding, etc., and the parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer and beaver are plentiful and brook and other trout abound in the streams and lakes. Heavy stands of tall, straight lodgepole pine provide forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk, deer, bear and beaver are common as well as several varieties of grouse. Spruce, poplar and white birch provide excellent cover for wildlife. Pickerel, pike and perch are prevalent in the lakes.

Alberta.—In Alberta, 31 Provincial Parks have been established by Order in Council of which 25 are being extensively developed at the present time. The Cypress Hills Provincial Park, covering an area of over 77 sq. miles, is the largest of these parks and is situated in the southeast portion of the Province. The other parks under development are: Aspen Beach, Beauvais Lake, Crimson Lake, Cross Lake, Dillberry Lake, Garner Lake, Gooseberry Lake, Kinbrook Island, Lac Cardinal, Little Bow, Ma-Me-O Beach, Park Lake, Pembina River, Red Lodge, Rochon Sands, Saskatoon Island, Steveston Dinosaur, Sylvan Lake, Taber, Vermilion, Wabamun Lake, Winagami Beach, Woolford and Writing-on-Stone. Picnic facilities, playground equipment and camping areas are provided in these parks which are maintained primarily for the recreation and enjoyment of Alberta residents.

British Columbia.—There are 112 Provincial Parks in British Columbia with a total area of about 12,706 sq. miles. These parks are classified A, B, C and Special. Class A Parks are those considered most highly for immediate recreational development and are strongly protected. Class B Parks are areas slated for development—valuable wilderness areas or places set aside for a specific reason. Class C Parks are intended primarily for the use of local residents and are usually under Board management. Special Parks, of which only one remains, were created in the past by Special Acts of the Legislature. The parks are in all stages of development and dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir and Wells Gray Parks and outstanding scenic and mountain places which include Garibaldi, Mount Robson and E. C. Manning Parks. Thousands of city dwellers throng to the ski slopes of Mount Seymour or picnic at Cultus Lake Park. The formal gardens of Peace Arch are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forest parks that have achieved a tremendous popularity with tourists—the best known are Little Qualicum Falls and Miracle Beach. In addition there is a campsite system closely integrated with the Provincial Parks, many campsites actually being located in the parks.

Subsection 4.—The National Capital Plan

Ottawa, the city selected by Queen Victoria in 1857 to be the permanent seat of the legislature of the united provinces of Upper and Lower Canada, was designated the National Capital of the Dominion upon Confederation in 1867. The community grew out of the military and construction camp which served as headquarters for the building of the Rideau Canal—a military project carried out between 1826 and 1832 which utilized the Rideau and Cataraqui Rivers to link Kingston on the St. Lawrence River and Lake Ontario with the Ottawa River thus providing a safe interior military waterway between Lake Ontario and Montreal by bypassing the vulnerable international section of the St. Lawrence River. Originally known as Bytown, after Col. John By, R.E., builder of the canal, the settlement prospered with the development of the lumber trade. The Act of Incorporation, changing Bytown to the City of Ottawa, was proclaimed on Jan. 1, 1855.

The city, situated in an area of great natural beauty, has remained a self-governing municipality and, although throughout the years the Federal Government co-operated with the municipal authorities in the development of a system of driveways and parks,

the city expanded without the benefit of any planned direction. In 1946, however, a Master Plan was approved, designed to guide the development of the Capital's urban area over the next half-century and to protect the beauty of the surrounding National Capital District. That District covers an area of about 900 sq. miles, one-third of which lies in the Province of Ontario and the remainder in Quebec. The co-operation of the Cities of Ottawa and Hull, twenty-eight other autonomous municipalities and the two provincial governments is essential to the successful implementation of the Plan. The federal agency responsible for its fulfilment is the Federal District Commission.

Projects under the Master Plan fall into four main categories: those for which the FDC is responsible, such as development of the Capital's parkway and parks system, including Gatineau Park and the relocation of the Capital's railway system; the federal building program, carried out by the Department of Public Works or other federal agencies, with the locations and exterior design of buildings subject to FDC approval; joint projects with the local municipalities in which the FDC is the federal planning and financial agency; and, finally, entirely municipal projects.

Details of the Plan are given in the 1956 Year Book at pp. 30-34. The present coverage serves to bring that review up to mid-1957.

The year 1957 was the tenth of active development under the Master Plan. During that year, in the urban area, work continued on the development of the 125-acre Hog's Back Park, designed to accommodate group picnics, and on Colonel By Drive along the east bank of the Rideau Canal between Dow's Lake and Hog's Back. The reconstruction of the Lady Alexander Drive section of the Driveway system in Rockcliffe, with its attractive views of the Ottawa River, was completed. Restoration of the Rideau Falls area continued with the demolition of old buildings adjacent to the French Embassy and the landscaping of the point on Green Island between the twin falls. Construction of Ottawa's new City Hall on the upstream end of Green Island was well advanced. In the east Hull area, plans were made for the development of a large park, with bathing and picnicking facilities, at Leamy Lake.

Progress on the long-range project to remove most of the railway operations from the central area of Ottawa to the outskirts continued with the transfer of CNR local freight services from Union Station to the new Ottawa freight terminus constructed by the FDC east of the Rideau River in the Hurdman Bridge area. The new Walkley Road yard facilities constructed by the Commission along the southern boundary of Ottawa West were occupied by the CNR in 1955, permitting the abandonment of the old CNR Bank Street yards on the cross-town tracks and clearing the right-of-way for construction of the Queensway. The agreement for the construction of the Queensway (actually a rerouting of Highway 17 for 21 miles across the Capital and its approaches from east to west, using the right-of-way of the abandoned CNR cross-town tracks for most of its length) was signed in 1957. The costs of this \$31,000,000 project will be shared by the Ontario Department of Highways, the Trans-Canada Highway Authority of the Federal Department of Public Works and by the City of Ottawa, the FDC providing the right-of-way westerly from the City's eastern boundary. Negotiations continued with the Canadian National and Canadian Pacific Railway Companies for establishment of a terminal company to operate all rail facilities south of the Ottawa River.

The extensive federal building program continued, although some years will elapse before new construction will permit the demolition of all the temporary wartime office structures erected in the Capital. Twelve major federal building sites in different sections of Ottawa's metropolitan area are in various stages of development, and over the past decade about 150 new federal buildings have been built or are under construction. Currently under development is the Rideau Heights site, overlooking the Rideau River between the south central area and the airport, where new buildings are being erected for the Department of Public Works and the Post Office Department; and the Department of Mines and Technical Surveys site adjacent to the Bureau of Mines buildings on Booth Street near Carling Avenue. A new Canadian Broadcasting Corporation head office

building will also be built in the Rideau Heights area. Development of the Tunney's Pasture site in the west central area continued with completion of new buildings for branches of the Departments of National Health and Welfare and for Atomic Energy of Canada. A start was made on the new Science Service Building of the Department of Agriculture in the Dominion Experimental Farm. The west structure of the Veterans Memorial Buildings on Wellington Street will be completed in 1958 and will be occupied by the Department of Trade and Commerce thus permitting demolition of No. 1 Temporary Building on the west end of Wellington Street and the erection there of the new National Library building.

A number of other federal buildings are in the planning stage, including a tri-service hospital on the Smyth Road east of the Rideau River. Ottawa's airport, where the FDC co-ordinated plans of the Royal Canadian Air Force, the Department of Transport and the National Aeronautical Establishment, is being extensively developed, and the Department of Transport started construction of a modern civilian air terminal building.

By 1957 the FDC had acquired most of the land needed for some fifty miles of new federal parkways, but apart from completion of the two-mile Fairy Lake Parkway in west Hull, no actual starts had been made. Fortune Lake Parkway in Gatineau Park, with its spectacular vistas of the Ottawa River valley, was paved and landscaped and a start was made on the ten-mile section running northerly from the Aylmer road in west Hull. The land acquisition program for the development of Gatineau Park in the Laurentian Hills north and west of the Ottawa-Hull metropolitan area made progress, and park improvements were continued with the construction of additional parking areas for the extensively used picnic grounds and bathing beaches at Lac Philippe.

Ottawa's major new municipal project is the widening of Carling Avenue from Bronson west to Kirkwood. Federally owned lands necessary to the construction of the new divided roadway were contributed to the project. The City has also undertaken the preparation of an official plan to guide its development within the framework of the Master Plan and part of the costs and technical assistance are being provided by the Commission. A federal-municipal committee was established to study the question of Ottawa River crossings between Ottawa and Hull. The committee concurred in the recommendations of an engineering firm that a new Ottawa-Hull bridge be eventually located about half a mile downstream from the present Interprovincial road and rail bridge. Smaller municipalities in the National Capital region are also being assisted by the FDC in the preparation of building and zoning by-laws.

In the spring of 1957 a Joint Committee of the Senate and the House of Commons reviewed the progress made by the Federal District Commission in the implementation of the National Capital Plan and its projects for the future. The Joint Committee report resulted in the drafting and subsequent first reading in Parliament of a new Act designed to facilitate the Commission's work, both in federal planning works and in co-operative Master Plan projects with the local municipalities.

Section 3.—Wildlife Resources and Conservation*

The Canadian Wildlife Service.—The Canadian Wildlife Service of the National Parks Branch, Department of Northern Affairs and National Resources is responsible for attending to wildlife matters coming within the jurisdiction of the Federal Government, except those within the purview of the National Museum and certain activities closely related to Indian affairs.

Its functions include acting in an advisory capacity with regard to conservation and management of wildlife in the Northwest Territories and Yukon Territory; advising and co-operating with the National Parks and Historic Sites Division regarding fish and wildlife problems in the National Parks; and administration of the Migratory Birds Convention Act in conjunction with the Royal Canadian Mounted Police and in co-operation with the

* Prepared by the Canadian Wildlife Service, Department of Northern Affairs and National Resources, Ottawa.

provincial game authorities. The Canadian Wildlife Service also handles national and international problems relating to Canada's wildlife resources and co-operates with governmental and other agencies having similar interests and problems in Canada and elsewhere.

The Service issues permits for bird-banding in Canada and is the Canadian clearing-house for bird-banding information. It issues permits to qualified persons to take migratory birds for scientific purposes; to take and possess migratory birds for propagating purposes; to collect eiderdown; and to engage in the business of taxidermy.

The Canadian Wildlife Service plans and carries out research into the ecology, numbers, food, shelter, migration, reproduction, diseases, parasites, predators, competitors and uses of wild creatures in Canada. In certain of these investigations, e.g., the mid-winter waterfowl inventory, it works in close co-operation with the United States Fish and Wildlife Service and with federal, provincial and private agencies in Canada. The Service is responsible for the establishment and administration of bird sanctuaries under the Migratory Birds Convention Act. On Dec. 31, 1956, there were 90 bird sanctuaries in Canada with a total area of more than 1,800 sq. miles.

The Limnology Section of the Service is concerned with research leading to the maintenance and improvement of sport fishing, the control of aquatic and semi-aquatic insects, the control of algae, and with other biological problems that arise in regard to water areas in the National Parks. It also acts in an advisory capacity to the Northern Administration and Lands Branch in connection with aquatic biological matters.

A series of special articles relating to the wildlife resources of Canada are being carried in the Year Book. Articles on Migratory Bird Protection in Canada, Game Fish in Canada's National Parks, The Barren-Ground Caribou, Migratory Bird Legislation, and Scientific Management of Game Fish in Canada's National Parks were carried in the 1951, 1952-53, 1954, 1955 and 1956 editions, respectively. The following article on the Musk-ox has been prepared by the mammalogical section of the Canadian Wildlife Service.

THE MUSK-OX

Canada shares with Greenland the distinction of harbouring native stocks of one of the most interesting of the Arctic animals, the musk-ox. This ruminant, or cud-chewing mammal, is found in certain areas of the Arctic mainland of Canada and on most of the larger Arctic islands. At first glance the musk-ox looks like a very hairy buffalo, but closer inspection reveals many important differences. Although it has a hump over the shoulders like a buffalo, the musk-ox is smaller, a large bull weighing up to about 900 lb. It has a long shaggy outer coat of hair and a very fine inner 'wool' to provide protection in winter.

The musk-ox is a survivor of ice-age times. It lived when the woolly mammoth roamed northern North America but, unlike the latter, it managed to survive after the disappearance of the vast glaciers which covered much of the country. In physical structure the musk-ox is closer to sheep or goats than to cattle. Its nearest living relative is the takin, an animal found only in mountainous Tibet.

At one time, before they began to be hunted, musk-oxen had a wide if sparse distribution throughout the barren-land regions of the Arctic mainland and Arctic islands of Canada. One exception is that there are no known records of musk-oxen on Baffin Island, possibly because of their extinction long ago by natives or because that island, for obscure reasons, was never colonized by musk-oxen.

However, records left by Samuel Hearne in the 1770's provide evidence that, even at that time, musk-oxen were restricted in numbers and distribution. Again, from 1862 to 1916 the Arctic mainland population was further drastically reduced. Musk-oxen were killed

for the commercial value of their hides, for skins and for meat by whalers wintering along the Arctic coast east of the Mackenzie River delta. On the Arctic islands similar heavy killing is recorded. The population on Banks Island was exterminated by natives before 1870 and, in the name of exploration, hundreds of animals were killed on Melville and Ellesmere Islands early in the present century. By 1930 the total population of musk-oxen in Canada was estimated by Dr. R. M. Anderson of the National Museum of Canada to be between 12,000 and 13,000 animals, of which 500 were on the mainland. That estimate is now believed to have been too high.

The extermination of many herds and the near elimination of many others, particularly on the Canadian Arctic mainland, in the second half of the 19th century and during the first fifteen years of the 20th century, created grave concern for the survival of the musk-ox. To conservationists it was unthinkable that a large ungulate, well adapted to living in a rigorous Arctic environment, should become extinct. The Canadian Government therefore passed an Act in 1917 protecting musk-oxen completely and in 1927 set aside the Thelon Game Sanctuary in the Northwest Territories to provide an area where musk-oxen and other valuable wildlife could increase without human interference.

Today musk-oxen are increasing steadily, if slowly, in numbers and are being reported in areas such as Banks Island and the area north of Great Bear Lake, where formerly they were believed to have been exterminated. The population in the Thelon Game Sanctuary is estimated to be over 350 animals. The total population in Canada is estimated at about 5,000 animals, of which 1,500 are thought to be on the Arctic mainland and 3,500 on the Arctic islands.

Musk-oxen are essentially gregarious, feeding and travelling in herds which vary in size from units of four or five animals to as many as one hundred. Herds exist throughout the year but probably do not contain the same individuals from year to year because the herds mingle in the autumn after the breeding season and disperse later into smaller units. When grazing or browsing, the individuals of a herd may be spread over an area of several hundred square yards but the herd unity is not lost because the wanderers rejoin the herd as soon as they notice their exposed situation. Mature bulls are frequently solitary in their habits, particularly immediately before and after the breeding season.

This desire to remain in herd formation appears to be an outstanding characteristic of the animals. The value and perhaps the original function of that social character is evident when a herd is attacked by wolves. The musk-oxen group together in a rough circle, facing outwards, with calves and immature animals between the adults. One wolf or a small pack would not be likely to attack successfully such a defensive formation. The sharp, heavy horns of adult cows and bulls, their heavy coat of long hair, nimble feet and powerful bodies make them formidable opponents. When sled dogs or possibly a large pack of wolves attack musk-oxen, bulls and adult cows make short dashes towards the predators in attempts to gore them, and then back into the herd. Under such circumstances it is possible that some musk-oxen are killed by their attackers.

The food of musk-oxen varies with the season and the terrain. In summer, on the Canadian Arctic mainland, the animals are browsers and grazers, feeding on willow, grasses, forbs and sedges. On the Arctic islands where willow growth is confined to prostrate plants sparsely scattered over large regions, musk-oxen must use a larger proportion of grasses and plants such as saxifrage (*Saxifraga oppositifolia* L.) and dryas (*Dryas integrifolia* M. Vahl.). Winter food is obtained in hilly country where vegetation is kept partly or completely free of snow by prevailing winds. Willow, birch, labrador tea and other woody plants form the bulk of food in winter. The extent of the seasonal movements between winter and summer ranges depends upon the nature of the country in which the animals live. In the

Arctic islands preliminary evidence suggests that these movements do not involve distances of more than 50 miles. On the mainland of Canada evidence suggests that musk-oxen there may move a distance of 50 to 100 miles or more to reach suitable feeding areas.

Much remains to be discovered about the reproductive biology of these ungulates. Their remote environment and relative scarcity make it difficult and expensive to conduct continuous long-term investigation. However, it is believed that musk-ox cows are mature at three or four years of age and bulls at five or six years of age. Cows do not seek a solitary spot to give birth to young, but remain with the herd. Evidence obtained from various studies suggests that calving occurs in alternate years with one calf delivered at a time. Twins are born rarely.

Fighting between adult bulls for the possession of herds and essentially of cows occurs chiefly during the months of July and August. Breeding occurs then, and the calving season extends from about the middle of April to the end of May. These dates appear to be true for the entire range of musk-oxen, which extends over a distance of 1,100 miles from latitude 64° N. to 82° N.

The calf percentage in a musk-ox population is low when compared with that of many other ungulates. On Fosheim Peninsula, for example, calves in 1951 comprised 9.2 p.c. of 215 animals, and in the Thelon Game Sanctuary in 1952 they were 11.2 p.c. of 169 musk-oxen. Calf survival was found to be extremely low in 1951 on Ellesmere Island, only three yearlings being present in the population studied. In the Thelon Game Sanctuary, however, survival in 1952 was found to be slightly over 60 p.c.

Canada's musk-oxen, in the rather distant future, may become an increasingly valuable resource. From a scientific viewpoint they present very interesting problems of research and management. From an economic viewpoint, as a result of eventual restocking of depleted areas and careful management of existing stocks, musk-oxen may once more reach the level of abundance where utilization could be permitted by natives or resident white people.

PART III.—CLIMATE AND TIME ZONES

Section 1.—Climate

A comprehensive discussion of the climatic regions of Canada is available in the 1948-49 Year Book, pp. 41-62, and detailed tabulations of climatic factors covering 36 meteorological stations located mostly at well known or populous centres are given in the 1950 Year Book, pp. 35-70. Other articles appearing in previous editions are listed under "Climate and Meteorology" in Chapter XXIX of this volume.

Table 1 gives long-term temperature and precipitation data for 35 representative Canadian stations; Tables 2 and 3 provide monthly temperature and precipitation data during 1956 for these same stations. These are mostly well sited or populous places with climates fairly representative of a considerable area. The figures given under "Temperatures" are averages obtained over the period of observation. Under "Precipitation", in calculating the annual total, inches of rain is considered the total depth of water accumulated on a hypothetical horizontal impervious surface without evaporation. Similarly the depth of snow given is that which falls on a horizontal surface without settling, melting or sublimation. Because the depth of water obtained from melting newly fallen snow is roughly one-tenth of the depth of the snow, the total precipitation is obtained by adding together the total rainfall and one-tenth of the depth of the newly fallen snow. A day with rain is, for the purpose of these tables, one on which 1/100 of an inch or more falls and a day with snow is one with at least 1/10 of an inch of newly fallen snow. Whenever the temperature four feet above the ground falls to 32°F. or lower the day is counted as a day with frost. The average date of the last spring frost and of the first frost in autumn marks the approximate period continuously free from frost.

1.—Long-Term Temperature and Precipitation Data for 35 Representative Stations

¹ Total rainfall plus one-tenth of the depth of newly fallen snow (see p. 30).

Section 2.—Standard Time and Time Zones

Standard time which was adopted at a World Conference held at Washington, D.C. in 1884, sets the number of time zones in the world at 24, each zone extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° longitude apart. The basis of world time is Greenwich time and all other time zones are a definite number of hours behind Greenwich.

Canada has seven time zones, the most easterly being Newfoundland standard time, three hours and thirty minutes behind Greenwich time. In the west, Pacific standard time, used throughout British Columbia and part of the Northwest Territories, is eight hours behind Greenwich, and Yukon standard time, used throughout the Yukon Territory, is nine hours behind Greenwich. Some municipalities adopt the time used by the local railways which, in certain cases, differs from the standard. There are also villages that adopt such time as seems best to suit their convenience but in general the legal boundaries of the different time zones are actually in use.

Daylight Saving Time.—For some years before World War I there was active propaganda, particularly in the cities, for the use during the summer months of an earlier time usually referred to as 'daylight saving time', one hour ahead of standard time. It was considered from the economic as well as from the health point of view that people in industrial towns and cities would gain by having longer periods of sunlight at their disposal for recreation. Canada adopted daylight saving time in 1918 but the Canadian Act lapsed at the end of that year. Since that date however most cities and towns have adopted daylight saving for varying periods in the summer months.

Legal Authority for the Time Zones.—Most of the regulations made in Canada concerning standard time have been passed by the provincial legislatures and the Northwest Territories Council. Legislation, besides determining the boundaries of zones, regulates such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for hunting and fishing, and times of opening and closing business houses and places of amusement.

PART IV.—GEOPHYSICS AND ASTRONOMY

Section 1.—Geophysics

Geophysics began with the observations made by early navigators of the weather, ocean tides and the lodestone. These studies gradually developed into modern meteorology, physical oceanography and terrestrial magnetism. To them were added other physical studies of the earth so that geophysics now includes also seismology—the study of earthquakes; hydrology—the study of waters in rivers, lakes, glaciers and underground (but not in the oceans); volcanology—the study of volcanoes and the earth's heat; tectonophysics—the study of the forces which build mountains and slowly cause changes in level of land and sea; the study of the earth's gravity; and several minor studies such as the determination of the ages of ancient rocks and minerals from their content of radioactive elements. In addition magnetic, electrical, gravitational, seismic and radioactive methods of geophysical prospecting are used to direct drilling in almost all the searches going on in Canada for oil and gas. Both airborne and ground devices are widely used by mining companies to prospect for metals.

The Dominion Observatory and the Geological Survey at Ottawa and the Physics Department of the University of Toronto are carrying out major programs of geophysical research. Several other universities across the country and various provincial governments are also doing geophysical work and the major oil companies as well as numerous geophysical prospecting establishments have developed geophysical techniques as their most effective approach to the problem of finding oil fields and mineral deposits. A detailed study of these activities is given in the 1956 Year Book, pp. 42-55.

Of particular current interest is the organization of an international program of scientific work to be conducted during 1957 and 1958, known as the International Geophysical Year, which is designed to make a concentrated study of the physics of the earth and its atmosphere. This program and Canada's part in it is described in the following special article.

THE INTERNATIONAL GEOPHYSICAL YEAR*

Despite the fact that the earth is the only body in the universe which can be studied closely there is a great deal yet to be known about it. Man's position on the earth limits direct contact to a very thin layer on its surface and a thin layer in the lower atmosphere but knowledge of its structure and composition from the very hot centre to the outer limits of the atmosphere is requisite. To the geophysicist the earth is not solid firmament but a potent mass far from a condition of permanent stability. The crust folds and mountain ranges are formed then erode away by the action of a very dynamic atmosphere. Ice ages come and go and considerable masses of water are stored in the great glaciers and ice caps. Fortunately the more violent changes are slow in the life of man but the less violent such as earthquakes, storms in the atmosphere, and tides in the ocean are commonly experienced. Even these involve enormous energy changes.

Many of the things to be learned require synoptic or simultaneous measurements over the surface of the earth and these can be obtained only by international co-operation. The International Geophysical Year organization is merely an attempt by scientists to concentrate for a period of eighteen months starting July 1, 1957, on the type of measurements which, when taken at one epoch over all the world, can answer some of the questions about the structure and behaviour of the earth and its atmosphere.

For the sake of convenience and because of the natural division of geophysics into specialized studies, the program for the IGY is divided into fourteen disciplines:—

- | | |
|------------------------|---|
| 1. World days | 8. Latitudes and Longitudes |
| 2. Meteorology | 9. Glaciology |
| 3. Geomagnetism | 10. Oceanography |
| 4. Aurora and Air Glow | 11. Rockets and Satellites |
| 5. Ionosphere Physics | 12. Seismology |
| 6. Solar Activity | 13. Gravity |
| 7. Cosmic Rays | 14. Radioactivity in the Earth's Atmosphere |

World days is not correctly called a discipline but, since the selection of days on which special measurements are to be taken required an international sub-committee parallel to those on other subjects, it is rightfully listed as important. The reason for selecting world days is that certain important types of measurements particularly in the upper atmosphere are too expensive and too difficult to carry out on a continuous or regular schedule. For instance, a great deal is learned about the upper atmosphere by firing rockets into it or releasing large free balloons carrying instruments to measure such things as temperature, pressure, density, radiation, the state of electrical conductivity, and chemical composition. The data are telemetered to ground stations as the measurements are made because recovery of the equipment is often impossible. The concentration of such expensive experiments into specially selected intervals is part of the plan. Ordinary meteorological stations each day release two radiosonde balloons of a size that will usually reach a height of about 50,000 feet. During selected world meteorological intervals, four or six a day will be released and larger balloons will be used to reach perhaps double that height.

Two kinds of world days have been planned. Those that can be selected in advance include regular world days (four per lunar month), eclipses, periods of unusual meteor activity, and world meteorological intervals (periods of ten days each quarter). The second type cannot be selected in advance and will be called on short notice when unusual solar activity causes effects in the upper atmosphere of particular interest. In some cases

* Prepared by Dr. D. C. Rose, Chairman of the Co-ordinating Committee, Canadian IGY Program, National Research Council, Ottawa.

periods of high probability of magnetic or ionospheric storms can be predicted by close observation of the sun. To watch it continuously, observatories scattered around the world must be in regular communication with the predicting and world-warning centre at Fort Belvoir, near Washington, D.C. The organizing of communications to the predicting centre and from it to all the stations needing the warning was no small task. When a disturbance is likely, an alert is announced followed by a special world interval of concerted study if the disturbance appears to justify it.

Everyone is familiar with problems in weather forecasting and, despite facetious remarks about the weather man, a knowledge of *Meteorology* is essential to air transport and to many industries. Meteorology is therefore a very dominant discipline in the IGY. The emphasis in the international program is on world-wide circulation of air and on a greater knowledge of the radiation budget or the exchange of energy between the earth and its atmosphere and between the earth and its atmosphere as a unit and the sun and sky. More extensive measurements in polar areas are important. The Canadian program involves enhanced observations at practically all the meteorological stations where balloon-borne radiosondes are sent up daily. The IGY list includes 46 such stations scattered fairly uniformly over all Canadian territory. Special radiation measurements are being taken at about 10 of the 46 stations and a detailed study of Arctic micro-meteorology is being made at Resolute in the far Arctic.

The important features of *Geomagnetism, the Aurora and Air Glow, Ionosphere Physics, and Solar Activity* can be discussed together. Clouds of particles and electromagnetic radiation are shot out in irregular bursts from the sun. The light and heat received from the sun is, on the whole, very steady but when the effects of ultra-violet light, X-rays and these clouds or beams of electrons and ionized atomic particles are examined they are found to be quite variable and the variability follows the well-known eleven-year cycle of sun-spot activity. The period 1957-58 was chosen for the IGY partly because it was expected to coincide with a maximum in solar activity.

Aurora occur more frequently during such periods than when the sun is quiet and abnormal ionospheric conditions are frequent at the same time. The ionosphere consists of reflecting layers of high electrical conductivity at heights between 50 and 200 miles in the atmosphere. It is of great commercial importance because most long-range radio communications depend on the reflection of radio waves from the various layers in the ionosphere. These layers vary in height and in electron density in regular ways with seasonal and diurnal periods, and with changes in solar activity, but superimposed on them are large fluctuations, very high ionospheric winds and the flow of electric currents high up in the atmosphere. The flow of electric currents represented by the motion of charged particles (which also cause the aurora) is influenced strongly by the earth's magnetic field and, in turn, distorts the earth's magnetic field causing the well-known magnetic storms.

An elaborate series of measurements, taken simultaneously, on the earth's magnetic field, on the occurrence, position and type of aurora, and on the ionosphere will give data from which much more may be learned about these phenomena which are important commercially as well as scientifically. To carry out the Canadian share of the observations, stations were established according to a plan to observe the aurora, the geomagnetic field and the ionosphere. The aurora belt or band of maximum frequency is roughly a circle of about 20° co-latitude from the geomagnetic pole. Churchill, Man., is in the centre of this band and a chain of stations north and south from Churchill was chosen. This chain starts at Alert (the most northerly part of Canada about 500 miles from the North Pole) and extends south to Winnipeg. In addition to Alert and Winnipeg, it includes Resolute, Baker Lake, Ennadai Lake, Churchill, Bird, and The Pas. Another chain extends westward and includes Yellowknife, N.W.T., Meanook, Alta., and Victoria, B.C. Saskatoon, Sask., is also an important centre for the measurement of these upper-atmosphere phenomena.

Cosmic Rays, the seventh discipline, is interesting because the energetic particles known as cosmic rays come mostly from interstellar space but also in occasional bursts from the sun. They are deflected by the earth's magnetic field and apparently by clouds of conducting gas at distances from the earth probably within the range of the solar system.

Latitude and Longitude studies deal with the motions of the earth and its exact size and shape. The exact position of the Poles and the rate of rotation vary slightly and a study of these is important. New techniques for astronomical position-fixing make it possible to secure more accurate dimensions of the earth.

Glaciology and Oceanography deal with the great areas of water storage on the earth. The existence of glaciers and the currents in oceans have profound effects on climates. The balance between water storage in ice caps and glaciers and in the oceans is quite critical and a change in this balance is one of the important slowly varying physical features of the planet. The Canadian program in glaciology includes an expedition to northern Ellesmere Island where the ice cap will be studied, an expedition to the Salmon Glacier in British Columbia and a snow and ice survey as widely spread over Canada as is possible. Oceanographic stations at St. Andrews, N.B., and Nanaimo, B.C., will take part in international deep ocean current surveys in the Atlantic and Pacific.

Perhaps the most spectacular experiments during the IGY are those that will be carried out in *Rockets and Satellites*. The firing of these is really only a means of sending measuring instruments to the outer limits of the atmosphere so that more may be learned about the space surrounding this planet. Instruments will be carried to measure such phenomena as the composition of the residual gas and the nature of solar and other radiation. The organization required to fire rockets and to get satellites on stable orbits, then to receive the data from them by radio, is sufficiently involved to justify listing this as a separate discipline. Canada has no rocket or satellite program, but the United States is carrying out extensive rocket firing at Churchill, Man., and Canada's Defence Research Laboratories are co-operating with United States scientists in this work.

Seismology and Gravity are two disciplines that have been organized on an international scale for many years. They were included in the IGY plan largely because expeditions to the Antarctic and other remote points made it possible to add stations to the existing net. The Canadian seismological station at Resolute, N.W.T., which has been in operation since 1950, is considered one of the most important in the world.

Radioactivity in the Earth's Atmosphere was added officially as an IGY discipline in 1956. The natural radioactivity in the atmosphere has been known for many years but a world-wide survey has never been conducted. Added to the natural radioactivity there is radioactive dust carried in the atmosphere after each atomic explosion which will take years to fall out. Questions to be answered include: how much is there and at what height it is carried, what are the physical processes in its falling out, and how it is being brought down with precipitation.

Historically, this International Geophysical Year is the third co-operative effort of this sort. The first two (1882-83 and 1932-33) were International Polar Years. In the first, Canadian science, being very young, took little part though there were three expeditions into northern Canada—one British, one German and one American. In the second there were five Canadian stations in northern Canada and one established there by the United Kingdom.

The organization of the international program is handled by a committee formed by the International Council of Scientific Unions, having headquarters and an executive office at Uccle, Belgium. It is known as the Comité Spécial de l'Année Géophysique Internationale (CSAGI). The Committee, composed of representatives from seven International Scientific Unions, is supported by an Advisory Council for the IGY which meets with the Committee and has representatives from the various co-operating nations. The

CSAGI acts as a co-ordinating headquarters and information centre. Sub-committees organized in the various disciplines work out uniform techniques for the world-wide measurements and endeavour to secure as complete coverage as possible.

In Canada, a Canadian National Committee was organized in 1953 as a sub-committee of the National Research Council's Associate Committee on Geodesy and Geophysics. This Committee, which included university and government scientists active in the various disciplines, drew up a proposed program and in 1955 recommended the formation of a small executive or co-ordinating committee to put that program into operation. The Co-ordinating Committee now consists of Dr. C. S. Beals, Dominion Astronomer, Mr. F. T. Davies, Defence Research Board, and Dr. D. W. R. McKinley and Dr. D. C. Rose of the National Research Council. Dr. Rose is Chairman of both Committees. The Canadian program is financed by the various government departments concerned with the activities involved including Mines and Technical Surveys, Transport, National Defence, Fisheries Research Board and the National Research Council. A number of Canadian universities are undertaking an important part in the program and are aided in doing so by assisted research grants from the National Research Council. As in the international organization, the Canadian program is one of co-operation among many scientific groups.

Section 2.—Astronomy

The modern era of astronomy in Canada may be said to have begun in 1905 with the completion of the Dominion Observatory, the national observatory of Canada. Prior to that an astronomical observatory established in 1851 at Fredericton, N.B., was used for a short time to determine the longitude of that centre and for general astronomical purposes; it has recently been rehabilitated as a historic monument. Other small observatories were established, one at Quebec City in 1851 and one at Kingston in 1875. Astronomical instruments were to be associated with the Magnetic Observatory built by the British Government at Toronto in 1839 but there is no record of them being set up until 1881. A small observatory established at McGill University in 1879 was used for many years for time observations.

Today the science of astrophysics is carried on mainly by three Canadian institutions: the Dominion Observatory at Ottawa, Ont., the Dominion Astrophysical Observatory at Victoria, B.C., both of which are administered by the Department of Mines and Technical Surveys, and the David Dunlap Observatory associated with the University of Toronto. Of the two Government institutions, the Dominion Observatory at Ottawa specializes mainly in the astronomy of position, in solar physics and in various branches of geophysical work, while the major effort in astrophysics is concentrated at the Dominion Astrophysical Observatory at Victoria. The David Dunlap Observatory, founded in 1935, is equipped with very fine astrophysical instruments of a kind similar to those in use at Victoria. It performs not only the functions of a privately financed and administered research institution but is also the nucleus of the Department of Astronomy at Toronto University. In addition to the work of these three major institutions and a number of smaller observatories, investigations in the field of radio astronomy are conducted by the National Research Council, Ottawa.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—CONSTITUTION OF CANADA

The Canadian federal state was established by the British North America Act, 1867, which united the three British North American provinces of Canada, New Brunswick and Nova Scotia into one country, divided into four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia. British Columbia entered the Union in 1871 and Prince Edward Island in 1873. The Province of Manitoba was created in 1870 and the Provinces of Saskatchewan and Alberta in 1905 out of portions of the territories formerly held by the Hudson's Bay Company which had been admitted to the Union in 1870. Newfoundland entered the Union in 1949. Canada now consists of ten provinces and two territories known as the Yukon Territory and the Northwest Territories.

The British North America Act of 1867 divided both legislative and executive authority between Canada and the provinces. Judicial authority was not similarly divided, federal and provincial courts having jurisdiction with respect to both federal and provincial laws.

Although the British North America Act of 1867 and its subsequent amendments is popularly regarded as the Constitution of Canada, it is not an exhaustive statement of the laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other statutes of the United Kingdom Parliament (e.g., the Statute of Westminster, 1931), statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the demise of the Crown, the Governor General, the Senate, the House of Commons, electoral districts, elections, Royal Style and Titles, and also statutes of provincial legislatures relating to provincial government and provincial legislative assemblies. Other written instruments such as the Royal Proclamation of 1763, early instructions to Governors, Letters Patent creating the offices of Governors and

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).

² Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

³ Extended by the Extension of Boundaries Act of Manitoba, 1881, and the Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).

⁴ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional Districts of Assiniboia, Athabasca, Alberta and Saskatchewan established May 17, 1882, by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

⁵ By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (31-32 Vict., c. 105) the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of 32-33 Vict., c. 3 and as the Northwest Territories by R.S.C. 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880) all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by 4-5 Edw. VII, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (33 Vict., c. 3) and a further portion was added to Manitoba in 1881 by 44 Vict., c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

⁶ By 39 Vict., c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 39 Vict. was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabasca were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council, dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

⁷ The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (R.S.C. 1886, c. 50) on Aug. 16, 1897 and by the Yukon Territory Act (61 Vict., c. 6) was declared to be a separate Territory.

Governors General, and Orders in Council passed pursuant to the British North America Act also form part of the Canadian constitutional system. In addition the Constitution of Canada includes well established usages and conventions. The preamble to the British North America Act states that it was the desire of the original provinces to be united "with a constitution similar in principle to that of the United Kingdom" and, accordingly, many of the usages and conventions of government that have been developed in the United Kingdom over the centuries are followed in Canada. For example, the Cabinet system of responsible government as developed in the United Kingdom obtains in Canada although no mention thereof is made in the British North America Act.

No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949 the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

Canada's Status in the Commonwealth of Nations.*—The several stages in the development of the status of Canada have been authoritatively described in the reports of successive Imperial Conferences including that held at London in 1926 which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations there developed as a complementary aspect of nationhood the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations and more recently in the United Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931 which provided for the removal of the remaining limitations on the legislative autonomy of the Commonwealth nations.

Thus Canada, under the Crown, has equality of status with the United Kingdom and the other Commonwealth nations in both domestic and foreign affairs; its Government advises the Crown in the person of the Governor General on all matters relating to Canada. Canada has membership in the United Nations; makes its own treaties; appoints its own ambassadors and other representatives abroad; levies its own taxes; makes its own laws which are executed by a government dependent on the will of a majority of the people; and maintains its own naval, military and air forces. In short, Canada has achieved full status of democratic nationhood within the Commonwealth of Nations.

* For a more detailed account see 1952-53 Year Book, pp. 101-104.

PART II.—MACHINERY OF GOVERNMENT

Section 1.—The Federal Government

Subsection 1.—The Executive

The Crown.—The British North America Act provides that “the Executive Government and authority of and over Canada is . . . vested in the Queen”. The functions of the Crown, which are substantially the same as those of the Queen in relation to the Government of the United Kingdom, are discharged in Canada by the Governor General in accordance with established principles of responsible government. The practical executive functions of government are exercised by the Cabinet.

The Queen.—The personal participation of the Queen in the functions of the Crown in Canada has been limited to such occasions as the granting of honours and awards, approval of changes in the Table of Precedence, institution of new military awards, or the periodic appointment of a Governor General. On the occasion of a royal visit, the Queen may participate in those ceremonies which otherwise are carried out in her name, such as the opening and dissolution of Parliament, the assent to Bills, and the granting of a general amnesty.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries the Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of the Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, Eng., that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 29, 1953. The title of the Queen, so far as Canada is concerned, now is:—

“Elizabeth the Second, by the grace of God of the United Kingdom, Canada and her other realms and territories Queen, Head of the Commonwealth, Defender of the Faith”.

The Governor General.—The Governor General, appointed by the Queen as her personal representative on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of the Queen in relation to the Government of Canada under new Letters Patent issued under the Great Seal of Canada (effective Oct. 1, 1947) and the provisions of the British North America Acts 1867 to 1952. Acting under the recommendations of his responsible Ministers, in the Queen’s name, he summons, prorogues, and dissolves Parliament and assents to Bills and exercises other executive functions.

The Governor General’s annual salary and allowances provided by the Parliament of Canada are respectively \$48,666 and \$100,000. In addition there are other expenses of office, including the salary of the Governor General’s secretary.

The present Governor General is styled His Excellency the Right Honourable Vincent Massey, C.H.

2.—Governors General of Canada since Confederation, 1867

Name	Date of Appointment	Date of Assumption of Office
VISCOUNT MONCK, G.C.M.G.....	June 1, 1867	July 1, 1867

THE RIGHT HONOURABLE VINCENT MASSEY, C.H.....	Jan. 24, 1952	Feb. 28, 1952

The Cabinet.—The Cabinet is a committee of Ministers chosen by the Prime Minister generally from Members of Parliament. By convention, all members of the Cabinet must either have seats in Parliament or secure seats within a short time and again by convention all Ministers in charge of departments of government must be members of the House of Commons. It is customary for the Leader of the Government in the Senate to be a member of the Cabinet. Ministers without Portfolio can be members of either House.

The Cabinet, under the leadership of the Prime Minister, directs the business of the Commons, initiates nearly all public Bills placed before Parliament, and has complete responsibility for the initiation of taxes and the recommendation of expenditures. Following established precedent or convention, it is always responsible to the Commons. When the Cabinet (the Government) suffers the defeat of a Government Bill or a vote of censure or of want of confidence in the Commons, which may call the Government to account at any time, the existing Government or Cabinet must either resign or request a dissolution from the Governor General. If it resigns, the Governor General calls on the Leader of the Opposition in the Commons to form a new Government. Alternatively, if the Government which has been defeated in the House is granted a dissolution and is defeated in the ensuing general election then, depending on the number of members returned, (1) the Government may decide to remain in office and seek a vote of confidence in the House when it meets; or (2) the Government may decide to resign immediately with the consequent result that the Governor General will ask the leader of the party with the highest number of members returned to form a new Government.

The primary responsibility of the Governor General in either of the above circumstances is to provide the nation with a Cabinet or Ministry capable of conducting Her Majesty's Government with the support of Parliament.

Although appointed by the Governor General, Cabinet members are selected by the Prime Minister from among his party colleagues in such manner as to ensure, as far as possible, representation of the several geographical and political regions of the country and its principal ethnic, religious and social interests. Each Cabinet Minister generally assumes charge of one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios or a Minister without Portfolio may hold one or more acting portfolios. In his acting capacity, the Minister exercises the same authority as if he were the Minister of the department.

3.—Prime Ministers since Confederation, 1867

Ministry	Prime Minister	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 - Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 - Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	Oct. 17, 1878 - June, 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ABBOTT.....	June 16, 1891 - Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON.....	Dec. 5, 1892 - Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL.....	Dec. 21, 1894 - Apr. 27, 1896
7	Hon. Sir CHARLES TUPPER.....	May 1, 1896 - July 8, 1896
8	Rt. Hon. Sir WILFRID LAURIER.....	July 11, 1896 - Oct. 6, 1911
9	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 10, 1911 - Oct. 12, 1917

(Conservative Administration)

3.—Prime Ministers since Confederation, 1867—concluded

Ministry	Prime Minister	Length of Administration
10	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 12, 1917 - July 10, 1920 (Unionist Administration)

12	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Dec. 29, 1921 - June 28, 1926
13	Rt. Hon. ARTHUR MEIGHEN.....	June 29, 1926 - Sept. 25, 1926
14	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Sept. 25, 1926 - Aug. 6, 1930
15	Rt. Hon. RICHARD BEDFORD BENNETT.....	Aug. 7, 1930 - Oct. 23, 1935
16	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Oct. 23, 1935 - Nov. 15, 1948
17	Rt. Hon. LOUIS STEPHEN ST. LAURENT.....	Nov. 15, 1948 - June 21, 1957
18	Rt. Hon. JOHN GEORGE DIEFENBAKER.....	June 21, 1957 - ...

4.—Members of the Eighteenth Ministry as at Oct. 15, 1957

(According to precedence of Ministers)

NOTE.—A complete list of the members of Federal Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in subsequent editions.

Office	Occupant	Date of First Appointment ¹	Date of Appointment to Present Portfolio
Prime Minister.....	Rt. Hon. JOHN GEORGE DIEFENBAKER.....	June 21, 1957	June 21, 1957
Minister of Public Works and Acting Minister of Defence Production.....	Hon. HOWARD CHARLES GREEN.....	June 21, 1957	June 21, 1957
Minister of Finance and Receiver General..	Hon. DONALD METHUEN FLEMING.....	June 21, 1957	June 21, 1957
Minister of Veterans Affairs.....	Hon. ALFRED JOHNSON BROOKS.....	June 21, 1957	June 21, 1957
Minister of Transport.....	Hon. GEORGE HEES.....	June 21, 1957	June 21, 1957
Solicitor General.....	Hon. LEON BALZER.....	June 21, 1957	June 21, 1957
Minister of National Defence.....	Hon. GEORGE RANDOLPH PEARKES.....	June 21, 1957	June 21, 1957
Minister of Trade and Commerce.....	Hon. GORDON MINTO CHURCHILL.....	June 21, 1957	June 21, 1957
Minister of Justice and Attorney General and Acting Minister of Citizenship and Immigration.....	Hon. EDMUND DAVIE FULTON.....	June 21, 1957	June 21, 1957
Minister of National Revenue.....	Hon. GEORGE CLYDE NOWLAN.....	June 21, 1957	June 21, 1957
Minister of Agriculture.....	Hon. DOUGLAS SCOTT HARKNESS.....	June 21, 1957	Aug. 7, 1957
Secretary of State.....	Hon. ELLEN LOUKS FAIRCLOUGH.....	June 21, 1957	June 21, 1957
Minister of Fisheries.....	Hon. J. ANGUS MACLEAN.....	June 21, 1957	June 21, 1957
Minister of Labour.....	Hon. MICHAEL STARR.....	June 21, 1957	June 21, 1957
Postmaster General.....	Hon. WILLIAM MCLEAN HAMILTON.....	June 21, 1957	June 21, 1957
Minister without Portfolio.....	Hon. JAMES MAC KERRAS MACDONNELL.....	June 21, 1957	June 21, 1957
Minister of Mines and Technical Surveys..	Hon. WILLIAM J. BROWNE.....	June 21, 1957	June 21, 1957
Minister of National Health and Welfare..	Hon. PAUL COMTOIS.....	Aug. 7, 1957	Aug. 7, 1957
Minister of Northern Affairs and National Resources.....	Hon. JAY WALDO MONTEITH.....	Aug. 22, 1957	Aug. 22, 1957
Secretary of State for External Affairs.....	Hon. FRANCIS ALVIN GEORGE HAMILTON.....	Aug. 22, 1957	Aug. 22, 1957
Leader of the Government in the Senate and Minister without Portfolio.....	Hon. SIDNEY EARLE SMITH.....	Sept. 13, 1957	Sept. 13, 1957
	Hon. JOHN THOMAS HAIG.....	Oct. 9, 1957	Oct. 9, 1957

¹ Appointee was not necessarily sworn in on date given.

Administrative duties in the various departments of government became so burdensome during World War II that Parliamentary Assistants were appointed to assist six Cabinet Ministers with their Parliamentary duties. The practice was extended after the War and at Oct. 15, 1957, there were 12 Parliamentary Assistants, as follows:—

To Prime Minister.....	WALLACE BICKFORD NESBITT
To Minister of Agriculture.....	JOHN A. CHARLTON
To Minister of National Health and Welfare.....	G. ERNEST HALPENNY
To Minister of Labour.....	ARTHUR MALONEY
To Minister of Public Works.....	CLAYTON W. HODGSON
To Mines and Technical Surveys.....	RAYMOND O'HURLEY
To Minister of Trade and Commerce.....	THOMAS M. BELL
To Minister of Transport.....	ANGUS R. MACDONALD
To Minister of Veterans Affairs.....	WALTER DINGSDALE
To Minister of Justice.....	DAVID J. WALKER
To Minister of Finance.....	RICHARD A. BELL
To Minister of National Defence.....	MARSHALL LAMBERT

The Privy Council.—The Queen's Privy Council for Canada is composed of eighty to ninety members who are sworn of the Council by the Governor General on the advice of the Prime Minister and who retain membership for life. The Council consists chiefly of present and former Ministers of the Crown. It seldom meets as a body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by a committee thereof consisting of the Ministers who constitute the Cabinet of the day and are also members of the Queen's Privy Council for Canada.

5.—Members of the Queen's Privy Council for Canada According to Seniority Therein as at Oct. 15, 1957

NOTE.—In this list the prefix "The Rt. Hon." indicates membership in the United Kingdom Privy Council. Clerk of the Privy Council and Secretary to the Cabinet, R. B. BRYCE; Assistant Clerk of the Privy Council, A. M. HILL.

¹ The ordinary legal limit of duration for each Parliament is five years. ² Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (B.N.A. Act, Sect. 50). ³ Date of general election. ⁴ Writs returnable.

⁵ Dissolution of Parliament. ⁶ During the war years Parliament was kept in almost continuous session. When prorogation took place it was followed immediately by a new session. During long adjournments provision was made whereby the Speaker could reconvene Parliament before the date previously set for reassembly.

⁷ Includes long adjournment from Nov. 29, 1956 to Jan. 8, 1957.

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of the Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice most Public Bills originate in the House of Commons although there has been a marked increase recently in the introduction of Public Bills in the Senate.

* Private Bills usually originate in the Senate. (See Chap. XXIX for current legislation.)

Under Sect. 91 of the British North America Acts, 1867-1952, the legislative authority of the Parliament of Canada extends to the following matters: the amendment of the Constitution of Canada (subject to certain exceptions); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks, weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95 the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (14-15 Geo. VI, c. 32) it was declared that the Parliament of Canada might make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions.

The Senate.—From an original membership of 72 at Confederation the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is traced in the 1940 Year Book, pp. 47-49, and is summarized by provinces in Table 7.

The House of Commons.—The British North America Act, 1867, provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be readjusted from time to time provided the proportionate representation of the provinces as prescribed by the Act was not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the general election of 1949.

After the completion of the 1951 Census it was apparent that as a result of a wartime shift of population a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly in an effort to eliminate sharp reductions in provincial representation from one census to another the British North America Act was again amended to provide representation on the following basis:—

"Sect. 51.—(1) Subject as hereinafter provided, the number of members of the House of Commons shall be two hundred and sixty-three and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following rules:—

"1. There shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by two hundred and sixty-one and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder, if any, after the said process of division.

"2. If the total number of members assigned to all the provinces pursuant to rule one is less than two hundred and sixty-one, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under rule one commencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is two hundred and sixty-one.

"3. Notwithstanding anything in this section, if upon completion of a computation under rules one and two, the number of members to be assigned to a province is less than the number of senators representing the said province, rules one and two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.

"4. In the event that rules one and two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which rules one and two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which rules one and two have ceased to apply and the number two hundred and sixty-one shall be reduced by the number of members assigned to such province pursuant to rule three.

"5. On any such readjustment the number of members for any province shall not be reduced by more than fifteen per cent below the representation to which such province was entitled under rules one to four of this subsection at the last preceding readjustment of the representation of that province, and there shall be no reduction in the representation of any province as a result of which that province would have a smaller number of members than any other province that according to the results of the then last decennial census did not have a larger population; but for the purposes of any subsequent readjustment of representation under this section any increase in the number of members of the House of Commons resulting from the application of this rule shall not be included in the divisor mentioned in rules one to four of this subsection.

"6. Such readjustment shall not take effect until the termination of the then existing Parliament.

"(2) The Yukon Territory as constituted by chapter forty-one of the Statutes of Canada, 1901, shall be entitled to one member, and such other part of Canada not comprised within a province as may from time to time be defined by the Parliament of Canada shall be entitled to one member." (R.S.C. 1952, c. 304.)

The principal effect of these new rules is that the representation of any province shall not be reduced by more than 15 p.c. at any one readjustment subject however to the qualification that the rule shall not work out in such manner that the representation of a province with a smaller population shall be greater than any province with a larger population.

Subsequently Parliament enacted a measure, "An Act to readjust the Representation in the House of Commons, 1952", effective in the general election of 1953, which provided that representation in the House of Commons shall be on the following basis:—

"Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members." (R.S.C. 1952, c. 344.)

The number of representatives of each province elected at each of the 23 general elections since Confederation is given in Table 9.

Under their parliamentary system of representation, based on a "constitution similar in principle to that of the United Kingdom", the people of Canada elect representatives having various political party affiliation as shown in Table 10. In a general election, the Canadian electorate not only determines what political party leader shall be called on to form the Government of the day, but it also decides which of the parties is to become the Official Opposition. Her Majesty's Loyal Opposition occupies an essential place in constitutions based on the British parliamentary system, in that its function is to oppose or criticize in debate the Government in power—an essential to good government at all times. The Official Opposition is founded, like such institutions as the Cabinet and the Prime Ministership, on unwritten custom that has become firmly established. Although the position of Leader of the Opposition is not recognized in the British North America Act, it received statutory acknowledgment in the Canadian Parliament in 1905 when the Senate and House of Commons Act (4-5 Edw. VII, c. 43, sect. 2) provided an additional sessional allowance to "the member occupying the recognized position of Leader of the Opposition in the House of Commons".

10.—Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons as Elected at the Twenty-Third General Election, June 10, 1957 and Revised to Oct. 15, 1957.

Speaker.....	THE HON. ROLAND MICHENER
Prime Minister.....	THE RT. HON. JOHN GEORGE Diefenbaker
Leader of the Opposition.....	THE RT. HON. LOUIS S. St. Laurent
Clerk of the House of Commons.....	LÉON J. RAYMOND

NOTE.—The vote is summarized by provinces in Table 12, p. 57. The leaders of the political parties are indicated by asterisks (*). For Parliamentary Assistants, see p. 44. This information, except the population of constituencies, has been supplied by the Chief Electoral Officer, Ottawa. Party affiliations are unofficial. 11.—By-elections from the Date of the General Election, June 10, 1957 to Oct. 15, 1957¹

Electoral District and Province	Date of By-election	Voters on List	Candidates	Votes Polled	Name of New Member	P.O. Address	Party Affiliation
		No.	No.	No.			
Lanark.....	Aug. 26, 1957	22,053	Acclamation		GEORGE H. DOUCETTE	Carleton Place....	P.C.

¹ By-elections from Oct. 15, 1957 to date of going to press are included in an Appendix to this volume.

Indemnities and Allowances.—Members of the Senate receive a sessional allowance at the rate of \$8,000 per annum. In addition they receive at the end of each calendar year an annual expense allowance of \$2,000 which is subject to income tax. Members of the House of Commons are paid a sessional allowance at the rate of \$8,000 per annum. In addition they receive \$2,000 as an expense allowance paid at the end of each calendar year. This allowance, except that for Ministers of the Crown and for Leaders of the Opposition in the House and in the Senate, is not subject to income tax. The remuneration of the Prime Minister is \$25,000 a year and of a Cabinet Minister and the Leader of the Opposition \$15,000 a year in addition to the sessional allowance and expense allowance each receives as a Member of Parliament. A Cabinet Minister is also entitled to a motor car allowance of \$2,000. The Speakers of the Senate and of the House of Commons each

receive, besides the sessional allowance and expense allowance, a salary of \$9,000 and a motor car allowance of \$1,000 and each is entitled to \$3,000 in lieu of a residence. The Deputy Speaker of the House of Commons receives a salary of \$6,000 and an allowance of \$1,500 in lieu of a residence. The Deputy Chairman of Committees receives an annual allowance of \$2,000. Parliamentary Assistants to the Ministers of the Crown receive \$8,000 sessional allowance as Members of Parliament, \$4,000 a year as Parliamentary Assistants and the \$2,000 expense allowance paid to all Members of Parliament.

The Federal Franchise.—The present federal franchise laws are contained in the Canada Elections Act (R.S.C. 1952, c. 23). The franchise is conferred upon all Canadian citizens or British subjects, men and women who have attained the age of 21 years and who have been ordinarily resident in Canada for 12 months prior to polling day at a federal election and ordinarily resident in the electoral district on the date of the issue of the writ ordering such election. Persons denied the right to vote are: —

- (1) The Chief Electoral Officer and the Assistant Chief Electoral Officer;
- (2) Judges appointed by the Governor General in Council;
- (3) The returning officer for each electoral district;
- (4) Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (5) Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property;
- (6) Persons restrained of their liberty or deprived of the management of their property by reason of mental disease;
- (7) Persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

The Canadian Forces Voting Regulations set out in the Schedule to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

12.—Voters on the Lists and Votes Polled at the Federal General Elections of 1945, 1949, 1953 and 1957

NOTE.—Corresponding statistics for the general elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948-49 edition, p. 94; and for 1940 in the 1956 edition, p. 81.

Subsection 3.—The Judiciary

The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act to provide from time to time for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (R.S.C. 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on Private Bills referred to the Court under any rules or orders of the Senate or the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$10,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

13.—Chief Justice and Judges of the Supreme Court of Canada as at Oct. 15, 1957¹

(In order of seniority)

Name	Date of Appointment
The Hon. Chief Justice PATRICK KERWIN.....	July 1, 1954 ²
The Hon. Justice ROBERT TASCHEREAU.....	Feb. 9, 1940
The Hon. Justice I. C. RAND.....	Apr. 22, 1943
The Hon. Justice ROY L. KELLOCK.....	Oct. 3, 1944
The Hon. Justice CHARLES H. LOCKE.....	June 3, 1947
The Hon. Justice JOHN R. CARTWRIGHT.....	Dec. 23, 1949
The Hon. Justice J. H. GERALD FAUTEUX.....	Dec. 23, 1949
The Hon. Justice DOUGLAS CHARLES ABBOTT.....	July 1, 1954

¹ One vacancy at Oct. 15, 1957.

² First appointed as a Judge of the Supreme Court, July 20, 1935.

Exchequer Court.—The Exchequer Court of Canada was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (R.S.C. 1952, c. 98). The Court consists of a president and four puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (R.S.C. 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (54-55 Vict., c. 29) and is now governed by the Admiralty Act (R.S.C. 1952, c. 1). Under this Statute the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—*Railway Act.*—The Railway Act, 1903 (R.S.C. 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (R.S.C. 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada. This Court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of Sect. 91 (21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (R.S.C. 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Income Tax Appeal Board.—By the Income Tax Act (R.S.C. 1952, c. 148) an Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court.

Provincial Judiciaries*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92 (14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district, and county courts in each province except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (R.S.C. 1952, c. 157). Under

* More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

Sect. 99 the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and House of Commons. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the county or union of counties for which the court is established.

All provinces have minor courts with limited civil and criminal jurisdiction, the judges of which are appointed by provincial authority as, for example, Justices of the Peace, Magistrates and Juvenile Court Judges. Except in Quebec there are County or District Courts of each province with limited jurisdiction varying from \$500 to \$2,500 in amount. Each province has a Superior Court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc. There is also a Court of Appeal in each province.

Section 2.—Provincial and Territorial Governments*

In each of the provinces, the Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described at p. 43 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly.

The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (30-31 Vict., c. 3 and amendments). Under Sect. 92 of the Act the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion as units in the federation.

* The information given in Subsections 1 to 10 of this Section is brought up to Mar. 31, 1957, except where otherwise indicated. Provincial elections held between the date shown in each case and the date of going to press are covered in an Appendix to this volume.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at the age of 21 years, who is a Canadian citizen or a British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. These qualifications apply with modifications to voters in most provinces. The principal exception gives voting privileges to persons in Saskatchewan at the age of 18 and in Alberta and British Columbia at 19 years.

Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. At May 1, 1957, Colonel the Honourable Sir Leonard Outerbridge was Lieutenant-Governor of the Province; he was commissioned on Sept. 5, 1949.

The Legislative Assembly has 36 members elected for a term of five years. The Legislature elected Oct. 2, 1956 is the 31st in the history of Newfoundland and the 3rd since Confederation.

The Premier and each Cabinet Minister receives a salary of \$7,000 per annum plus a sessional indemnity of \$3,000. Each Member of the House of Assembly receives a sessional indemnity of \$3,000. An additional allowance of \$2,000 is made to the Leader of the Opposition.

Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Honourable T. W. L. Prowse, Lieutenant-Governor of the Province at Mar. 31, 1957, was commissioned to office on Oct. 4, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 86.

The General Assembly elected May 25, 1955, is the 48th in the history of Prince Edward Island Legislatures and the 23rd since Confederation. It has 30 members from 15 electoral districts who serve for a statutory term of five years. One-half of the Members of the Legislative Assembly are elected on a property vote. Each district elects one Councillor (elected on a property vote) and one Assembly member (elected on a general franchise vote).

The annual salary of the Premier is \$6,000 and each Cabinet Minister, with two exceptions, receives \$4,000; the Minister of Education and the Minister of Health each receive \$3,000. Each Member of the Assembly is paid the sum of \$1,450 for each session attended by him and an additional amount of \$500 tax free as indemnity for expenses incurred. The Speaker is paid an additional sum of \$400 and a further additional amount of \$200 tax free as an indemnity. The Leader of the Opposition is paid an additional sum of \$800 and a further additional amount of \$200 tax free for expenses incurred by him in performance of official duties.

Subsection 3.—Nova Scotia

The Government of the Province of Nova Scotia has a Lieutenant-Governor, an Executive Council and a House of Assembly. The Honourable Alistair Fraser, Lieutenant-Governor at Mar. 31, 1957, was commissioned to office Sept. 1, 1952. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 87.

The Legislature has 43 members elected for five years, the maximum duration of its existence. The Legislature elected Oct. 30, 1956, was the 46th in Nova Scotia's history and the 23rd since Confederation.

The Premier of the Province receives a salary of \$12,000 per annum and each Cabinet Minister a salary of \$10,000 per annum. Each Member of the House of Assembly receives a sessional indemnity of \$2,400 and an allowance of \$1,200 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$3,000 in addition to his sessional indemnity.

Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. The Honourable David Laurence MacLaren, Lieutenant-Governor at Mar. 31, 1957, was commissioned to office Nov. 1, 1945. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 89.

The Legislature elected June 18, 1956, is the 43rd in New Brunswick's history and the 16th since Confederation. It has 52 members who are elected for a statutory term of five years.

The Premier receives \$5,000 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$7,500, the amount paid as indemnity to each Member of the House of Assembly is \$2,400, plus an additional \$1,200 allowance for expenses. The Leader of the Opposition receives an additional \$3,000. An allowance of \$1,000 in addition to the regular indemnity is made to the Speaker.

Subsection 5.—Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council, and a bicameral legislature—the Legislative Council and the Legislative Assembly. The Honourable Gaspard Fauteux, Lieutenant-Governor at Mar. 31, 1957, was commissioned to office Oct. 3, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 90.

The Legislative Council has 24 members nominated for life by the Lieutenant-Governor in Council. The Legislative Assembly has 93 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of laws that already exist. A Bill to be approved by the

Lieutenant-Governor must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a Legislature is five years.

Salaries and allowances of the Premier, Members of the Executive Council, Legislative Council and Legislative Assembly are fixed according to R.S.Q. 1941, c. 7 and R.S.Q. 1941, c. 4 as amended by 1-2 Eliz. II, c. 38 and 5-6 Eliz. II, c. 51. All Members of Legislative Assembly and Legislative Council receive \$5,000 per annum as salary and \$2,000 by way of allowances; in addition, the Premier receives \$10,000 as salary, \$4,000 allowances and \$2,000 for lodging allowance; Ministers with portfolio an additional \$8,000 as salary and \$2,000 allowances; Ministers without portfolio an additional \$5,000 salary and \$2,000 allowances; the Leader of the Opposition in the Legislative Assembly \$6,000 as salary, \$2,000 allowances and \$2,000 for lodging allowance; and the Leader of the Government in the Legislative Council and the Leader of the Opposition in the Legislative Council each receive \$7,000 as salary, \$2,000 allowances and \$3,000 for office allowances.

Subsection 6.—Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. The Honourable Louis O. Breithaupt, LL.D., Lieutenant-Governor of the Province at Mar. 31, 1957, was commissioned to office Jan. 24, 1952. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 92.

The House of Assembly, the single-chamber Legislature of the Province, is composed of 98 members elected for a statutory term of five years.

Besides the regular Departments of Government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission have been created.

Under the provisions of the Legislative Assembly Act (R.S.O. 1950, c. 202, as amended 1956, c. 39) each Member of the Assembly is paid an annual indemnity of \$3,600 and an allowance for expenses of \$1,800. In addition, the Speaker receives a special indemnity at the annual rate of \$3,000 and an expense allowance of \$2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$1,000; and the Leader of the Opposition a special indemnity of \$3,000 and an annual allowance of \$2,000 for expenses. Each Member of the Cabinet having charge of a Department receives the ordinary indemnity as a Member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is \$14,000 and for a Cabinet Minister having charge of a Department \$10,000. A Minister without Portfolio receives only the indemnity and expense allowance of a Member of the Legislature. By the 1956 amendment, every Minister of the Crown in charge of a Department, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receive a representation allowance of \$2,000 per annum.

Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Honourable Frank Mackenzie Ross, C.M.G., M.C., LL.D., Lieutenant-Governor of the Province at Mar. 31, 1957, was commissioned to office Oct. 3, 1955. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 98.

The Legislative Assembly, elected for a statutory term of five years, has 52 members.

Each Member of the Executive Council and the Legislative Assembly receives a sessional allowance of \$3,400 and \$1,000 for expenses. There is also paid to each Member a living allowance of \$15 for each day's attendance at the session and for each Saturday, Sunday or holiday that intervenes between two sittings of the House; the allowance of \$15 in any session is not paid in respect of more than 40 days. Each Member also receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest

mail route. In addition, the Premier receives a salary of \$15,000 and each Member of the Executive Council \$12,500. The Leader of the Opposition has a special allowance of \$3,500 for expenses and the Speaker and Deputy Speaker receive a special allowance of \$3,500 and \$1,000 respectively.

Subsection 11.—Yukon and Northwest Territories

Yukon Territory.—The Yukon was created a separate Territory in June 1898. Provision is made for a local Government composed of a Chief Executive, styled Commissioner, and an elective Legislative Council of five members with a three year tenure of office. The Commissioner administers the Government under instructions from the Governor in Council or the Minister of Northern Affairs and National Resources. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of prisons and municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, administration of justice and generally all matters of a local nature in the Territory. The seat of local government is at Whitehorse, Yukon Territory.

TERRITORIAL COUNCIL

(Five members elected 1955, for three years)

Dawson.....	V. C. MELLOR	Whitehorse East.....	J. L. PHELPS
Mayo.....	D. C. McGEACHY	Whitehorse West.....	R. HULLAND
	Carmacks.....	A. R. HAYES	

TERRITORIAL OFFICIALS

(AS AT MAY 31, 1957)

Commissioner (Whitehorse).....	F. H. COLLINS
Superintendent of Works and Buildings.....	K. BAKER
Registrar of Vital Statistics.....	H. TAYLOR
Legal Adviser.....	F. G. SMITH

The Director of the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, is directly responsible for the general administration of the Territory under the Yukon Act (R.S.C. 1952, c. 298) and that Department has three lands and mining officials stationed in the Territory. Other Departments of the Federal Government including Justice, National Revenue, Transport, Post Office, etc., also maintain officials in the Yukon Territory.*

Northwest Territories.—As reconstituted on Sept. 1, 1905, these comprise:—

- (1) all that part of Canada north of the Sixtieth Parallel of North Latitude, except the portions thereof within the Yukon Territory and the Provinces of Quebec and Newfoundland, and
- (2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

The Northwest Territories Act (R.S.C. 1952, c. 331) provides for the appointment of a Commissioner to administer the government of the Territories under instructions given from time to time by the Governor in Council or the Minister of Northern Affairs and National Resources. As a matter of practice the appointment is held by the Deputy Minister of Northern Affairs and National Resources. For administrative purposes the Territories are divided into the provisional districts of Mackenzie, Keewatin and Franklin (Order in Council dated Mar. 16, 1918). The Northwest Territories Act, as amended, also provides for a Council of nine members, four of whom are elected in the Mackenzie District and five of whom are appointed by the Governor in Council. The Commissioner in Council has legislative powers respecting such matters as direct taxation, establishment and tenure of territorial offices, municipal institutions, controverted elections, licences, incorporation of companies, property and civil rights, administration of justice, game, education, hospitals and generally all matters of a merely local or private nature. The Council meets once each year in the Territories and at least once each year in Ottawa which is the Seat of Government. The resources, except game, remain under the control of the Federal Government. The administration of legislation passed by the Commissioner in Council and the management of resources under federal legislation are carried on by the Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources. Administrative offices are located in the Territories at Fort Smith, Yellowknife, Hay River and Aklavik.

COUNCIL OF THE NORTHWEST TERRITORIES

(AS AT AUG. 19, 1957)

Commissioner..... R. G. ROBERTSON**Deputy Commissioner**..... W. G. BROWN**Members of the Council—**Appointed..... LOUIS DE LA C. AUDETTE, C. M. DRURY, JEAN BOUCHER,
W. G. BROWN, L. H. NICHOLSON

Elected..... K. LANG, J. W. GOODALL, ROBERT C. PORRITT, JOHN PARKER

Officers of the Council—

Secretary..... R. A. BISHOP

Legal Adviser..... WM. NASON

* Further information on officials of various Federal Government Departments serving Yukon Territory may be obtained from the Director, Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, Ottawa.

Section 3.—Municipal Government*

Most Canadians are served by municipal government, although, paradoxically, a great part of the country does not have municipal government. The populated strip running through the Maritime Provinces, along the St. Lawrence River and the eastern Great Lakes, and from Lake Superior to the Pacific is largely municipally organized, but vast areas of the Provinces of Newfoundland, Quebec and those of western Canada, together with the Territories, are so thinly populated that only a few isolated municipalities have been set up.

Except in the Territories, municipal government is organized and functions under provincial jurisdiction. While there are basic similarities in the municipalities as between provinces, there are infinite variations in the detail of legislation governing incorporation, power and functions, in methods of control and assistance, and in local administrative practices.

For municipalities the postwar period has been changeful. Reorganization has been a live topic, and to a degree has come about in some provinces. Ontario has formed a Metropolitan Municipality in the Toronto area. Alberta has realigned the boundaries of its rural municipalities. Like actions are being debated in other provinces. A whole system of local government has grown up in Newfoundland. Several legislative Acts governing municipalities have been substantially rewritten. The Federal Government and some provincial governments have instituted plans for payments in lieu of taxes on Crown property. Serious thought has been given to assessment methods, their improvement and standardization. Financial reporting is gradually being made comparable. Provincial assistance has been revised and increased. And as yet there appears no slackening in the pressure to change the municipal systems, though not all are in accord on degree or on direction, or on the need for any basic change.

In their operating programs many urban municipalities are faced with a great demand for facilities and services as a result of increased need for modern amenities, for better roads and streets and more services, and also as a result of their rapid and sometimes almost explosive growth. The resulting increase in taxation, borrowing and provincial aid is causing much of the pressure for organizational and financial changes, even of a constitutional nature.

An outline of municipal organization at the end of 1956 in each of the provinces of Canada is given in the following paragraphs.†

Newfoundland.—Newfoundland has two cities, St. John's and Corner Brook, the latter becoming incorporated on Jan. 1, 1956. The remainder of the population is dispersed in small settlements along the coast and only since 1937 have a few of the larger of these been set up individually as towns with local councils or, where two or three are close together, as rural districts. These latter are not rural municipalities but merely towns consisting of two or more settlements. Local affairs in the remainder of the Province are administered by the Provincial Government. In 1949 the Local Government Act was passed to facilitate incorporations. There were 31 towns and four rural districts incorporated under the Act at the end of 1956 and 24 local government communities with lesser powers of government.

Prince Edward Island.—The Province has one city, Charlottetown, and seven towns, all incorporated by special Acts. They comprise less than one-half of one per cent of the area of the Island and only about a quarter of its population. The Village Service Act, 1951, provides for the incorporation of villages. The remaining area of the Province is not organized municipally, the three counties being provincial administrative units only.

Nova Scotia.—Municipal organization in Nova Scotia covers the whole of the Province. The two cities, Halifax and Sydney, operate under special charters and certain special legislation. Forty towns operate under the Town Incorporation Act but there are

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

† Municipalities are summarized by type of organization on p. 75.

no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities.

New Brunswick.—The Province is divided into 15 counties which are incorporated municipalities and have direct powers of local self-government in the rural areas. In effect therefore they are rural municipalities. In most cases certain of their powers apply in both rural and urban municipalities. The five cities—Saint John, Fredericton, Moncton, Edmundston and Lancaster—have special charters, and the 20 towns operate under the Towns Incorporation Act. There are two villages and 56 local improvement district areas within the counties but outside the cities, towns and villages; these have been incorporated for the provision of limited municipal services.

Quebec.—Municipal divisions in Quebec embrace the more thickly settled areas comprising about one-third of the Province, the remainder being governed by the Province as 'territories'. The organized area is divided into 75 county municipalities, which are divided again into local municipalities under the Municipal Code and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas with little or no population. There are 336 villages and 1,129 townships and parishes. A small number of these are independent of the counties in which they are located. Of the 42 cities a few have special charters. The remainder along with the 149 towns are governed by the Cities and Towns Act and numerous special Acts.

Ontario.—Slightly more than one-tenth of the area of Ontario is municipally organized, the remainder being governed entirely by the Provincial Government. The older section of the Province is divided into 43 counties, five of which are united with others for administrative purposes. Although an incorporated municipality each county is comprised of the towns, villages and townships situated within its borders, which provide its revenue. The Municipality of Metropolitan Toronto encompasses one city, four towns, three villages and five townships. There are 29 cities, 155 towns, 156 villages, 572 townships and 22 improvement districts in the Province. Some of each are located in the northern districts which are not organized into counties.

Manitoba.—Only the southern and settled section of Manitoba comprising less than one-eighth of the area is organized for local self-government. As in the other three western provinces there is no county organization and all municipalities are independent except of provincial control. There are five cities, four with special charters and one governed by a number of special Acts. General Acts govern the 35 towns, 37 villages, 109 rural municipalities and four suburban municipalities. An Act of 1944 (amended January 1945) authorizes organization of local government districts in unorganized or in disorganized (formerly organized but later unorganized) territory, and 14 such districts have been set up.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are eight cities, 99 towns, 377 villages and 296 rural municipalities. The area so organized consists of most of the southern two-fifths of the Province—the remainder of this portion is administered for local purposes by the Province in unincorporated local improvement districts. The northern three-fifths is sparsely populated and without local government though some municipal services are provided by the Province through operation of the Northern Administrative Area.

Alberta.—In Alberta there are eight cities, 83 towns, 145 villages and 48 rural municipalities known as municipal districts. Included in the latter are seven county municipalities which are not counties as they exist in Ontario for example but are municipalities

where the council administers education and municipal hospitals. There are also some unincorporated improvement districts administered by the Province in less densely settled areas but only about one-fifth of the Province is organized.

British Columbia.—Less than 0.5 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the Provincial Government. There are 36 cities, 52 villages and 30 districts. The latter are chiefly rural municipalities except for those adjacent to the principal cities of Victoria and Vancouver, which are largely urban in character. It should be emphasized however that the application of the name "city" is somewhat different from the commonly accepted meaning in that several of them have populations of fewer than 1,000 and perhaps one-half or more would not normally be incorporated as cities in another province. Legislation of 1957 provides for incorporation of towns.

Yukon and Northwest Territories.—There are two cities and one town in the Yukon Territory and two local administrative districts in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table 24.

24.—Municipalities, by Official Designation¹ and by Statistical Classification², by Province, Quebec as at Mar. 16, 1957 and All Others as at Dec. 31, 1956

Commission to inquire into certain charges, allegations and reports relating to the conduct of the business of Government in the Province of Alberta made in speeches, articles and editorials and in reports of meetings, statements and addresses published in the newspapers and also on radio and television in various parts of Alberta.	—	Sept. 2, 1955
BRITISH COLUMBIA		
Commission to inquire into allegations suggestive of corruption in the Police Department of Vancouver, and into the administration of the Police Department of Vancouver, and of laxity in the enforcement of the Criminal Code of Canada by that Department, and specifically determine whether such allegations or any part of them are true in whole or in part and as to whether the Criminal Code of Canada is being properly and efficiently administered by the Police Department of the City of Vancouver.	Reginald Hibbert Tupper.....	June 24, 1955
Commission to inquire into the problems of production, packing, storage, processing and marketing and distribution of the products of the tree fruit industry of British Columbia and particularly into (a) what constitutes an economic unit of production, (b) the economics of packing, storage and processing facilities, procedures and techniques employed in the Province, (c) the factors involved in the marketing of tree fruit products.	Earl D. MacPhee.....	Dec. 21, 1956

PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT†

A special article presenting information on the administration and control of the financial affairs of the Federal Government appears in the 1956 Year Book at pp. 101-107.

Section 1.—Departments, Boards, Commissions, etc.

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Though it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all the departments, the main branches are given along with those services that differ in some quality from the larger

* Hon. Justice Hugh Macdonald resigned the chairmanship of the Commission and was replaced on Feb. 7, 1956 by James C. Mahaffy.

† As at May 31, 1957.

class of subjects handled by a department. The work of many of these departments and boards is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.—This Department was established in 1867 (30 Vict., c. 53) and conducts the concerns of all phases of agriculture. Research and experimentation are carried out by the Science Service and the Experimental Farms Service; the maintenance of standards and protection of products by the Production Service and Marketing Service; reclamation and development by the Prairie Farm Rehabilitation Administration and the Maritime Marshland Rehabilitation Administration; security and price stability policies are administered under the Prairie Farm Assistance Administration and the Agricultural Prices Support Board. The results of work in these various fields and general information on the policies of the Department is made available to the public through the Information Service.

Auditor General's Office.—This Office originated in 1878 (41 Vict., c. 7) and currently functions under the Financial Administration Act (R.S.C. 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

Board of Grain Commissioners.—Constituted in 1912 under the Canada Grain Act, 1912—now Canada Grain Act, 1930 (R.S.C. 1952, c. 25)—the Board of Grain Commissioners provides general supervision over grain handling in Canada, by licensing elevator operators, inspecting and weighing grain *en route* to and shipped from terminal elevators, and other services. The Board, comprising a Chief Commissioner and two Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the *Canada Gazette* and reports to Parliament through the Minister of Trade and Commerce.

Board of Transport Commissioners.—The powers of this Board, which was organized as the Board of Railway Commissioners in 1904, have been extended from time to time until today it has regulatory and judicial functions dealing with almost all aspects of railway activity including location, construction and operation of lines, rates and charges. It is also entrusted with the regulation of other transportation and communication agencies, including express companies, telegraph companies, telephone companies other than those provincially or municipally controlled, international bridges and tunnels, inland shipping and pipelines. The Board reports to Parliament through the Minister of Transport.

Canadian Government Specifications Board.—This is a co-operative body in which Government and industry participate on a voluntary basis. It was formed June 13, 1934, as the Canadian Government Purchasing Standards Committee, under the auspices of the National Research Council. It undertakes the preparation of specifications in commodity fields and for materials, processes and equipment in which government departments and agencies may be interested and arranges for testing and research work.

Chief Electoral Office.—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (R.S.C. 1952, c. 23), and amendments thereto, and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council. In addition it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer reports to Parliament through the Secretary of State.

Department of Citizenship and Immigration.—This Department was constituted in December 1949 (R.S.C. 1952, c. 67) and came into existence on Jan. 18, 1950, under the Minister of Citizenship and Immigration. Most departmental work is carried on through four branches: The Canadian Citizenship Branch assists governmental and non-governmental agencies engaged or interested in facilitating the adjustment and integration of newcomers and in making Canadians conscious of their privileges and responsibilities as citizens. The Canadian Citizenship Registration Branch administers the Canadian Citizenship Act and is the custodian of all records under that Act and all Naturalization Acts previously in force. The Immigration Branch administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants, the exclusion or deportation of undesirables and the settlement or establishment of immigrants in Canada. The activities of the Indian Affairs Branch include management of all Indian affairs. Its organization consists of a headquarters office at Ottawa, a regional supervisory staff, and 87 local agencies in the field.

The Minister of Citizenship and Immigration is responsible to Parliament for the National Film Board, the National Library, the Public Archives, and for the National Gallery of Canada which is governed by a Board of Trustees.

Civil Service Commission.—The Civil Service Commission of Canada dates from the Civil Service Act of 1908. Under this Act the Commission was given the responsibility of applying, wherever possible, the principle of appointment by merit in filling permanent positions within departmental headquarters positions at Ottawa, termed the 'inside service'.

The Civil Service Act 1918 extended the competitive system of appointments to cover the outside as well as the inside service and temporary as well as permanent appointments. It made the Commission responsible for establishing a system of organization and classification that would secure uniformity in the staffing of the various departments and in the salaries paid for work of equal levels of difficulty and responsibility.

The jurisdiction of the Commission now extends to all departments of the Government and to a large number of boards and commissions, exclusive of Crown corporations.

The Civil Service Commission, which reports to Parliament and makes recommendations to the Government through the Secretary of State, consists of three members, one of whom serves as Chairman. Each member of the Commission is appointed by the Governor in Council for a term of ten years and each has the rank and standing of a Deputy Minister. The Commission has a staff of approximately 620 persons located in the headquarters office at Ottawa and in district offices at St. John's, Nfld., Halifax, N.S., Moncton, N.B., Montreal, Que., Toronto, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Alta., and Vancouver, B.C.

Department of Defence Production.—This Department was established on Apr. 1, 1951, under the provisions of the Defence Production Act (R.S.C. 1952, c. 62, as amended). Under this Act the Minister is given, with certain exceptions, authority to buy defence supplies and construct defence projects required by the Department of National Defence. The Minister may, if authorized by the Governor General in Council, undertake for an associated government anything he may undertake for the Canadian Government. In addition, all powers, duties and functions that theretofore were vested in the Minister of Trade and Commerce under any contract, agreement, lease or other writing entered into pursuant to the Department of Munitions and Supply Act, 1939, or the Defence Supplies Act, 1950, are vested in the Minister of Defence Production.

Broadly, the Department's functions are to procure military goods, to construct defence installations and to organize industry for defence as required on behalf of the Department of National Defence, other government departments, and associated governments; to promote the expansion of defence production facilities and the development of defence-supporting industries particularly of strategic resources important for the defence of Canada and its allies; and to ensure adequate supplies of essential materials and services for defence requirements. The main procurement units of the Department are six production branches—Aircraft, Ammunition, Electronics, Gun, Machine Tool and Shipbuilding—and a General Purchasing Branch. Major offices for foreign procurement are located at London, England, and Washington, U.S.A.; and the General Purchasing Branch has 14 district purchasing offices located throughout Canada for local or urgent procurement. In addition, there are various service branches which include Administration, Comptroller's, Economics and Statistics, Financial Adviser's, Industrial Security, Legal, and Secretary's.

The following Crown companies report to Parliament through the Minister of Defence Production: Canadian Arsenals Limited, Canadian Commercial Corporation, Crown Assets Disposal Corporation, Defence Construction (1951) Limited, and Polymer Corporation Limited.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (R.S.C. 1952, c. 257); it was amended by 1-2 Eliz. II, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct a census of population and agriculture of Canada at ten-year intervals.

The Bureau is the principal publication agency of the Federal Government; the subjects of the reports cover all aspects of the national economy. The Bureau reports to Parliament through the Minister of Trade and Commerce.

Department of External Affairs.—This Department was established in 1909 by "An Act to create a Department of External Affairs" (R.S.C. 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The head of the Department of External Affairs is the Secretary of State for External Affairs. The senior permanent officer of the Department is the Under-Secretary (Deputy Minister) who is the chief adviser to the Secretary of State for External Affairs. He is assisted by a Deputy Under-Secretary and by three Assistant Under-Secretaries and a Legal Adviser and is advised by officers in charge of the various divisions, each responsible for a part of the work of the Department. The divisional heads are assisted by Foreign Service Officers, Administrative Officers and by an administrative staff. Officers serving abroad are formally designated as Ambassadors, Ministers, Counsellors, First, Second and Third Secretaries at diplomatic posts and as Consuls General, Consuls and Vice-Consuls at consular posts. Fifty-eight diplomatic and consular posts are maintained abroad.

The work of the Department at Ottawa is performed by 19 divisions, which can be grouped according to their functions into three categories—political, functional and administrative. There are five political divisions—American, Commonwealth, European, Middle Eastern and Far Eastern; ten functional divisions—Communications, Consular, Defence Liaison (1) and (2), Economic, Information, Legal, Historical Research and Reports, Protocol and United Nations; and four administrative divisions—Establishments and Organization, Finance, Personnel, and Supplies and Properties. There are also three smaller sections—Inspection Service, Political Co-ordination Section and the Press Office.

Department of Finance.—This Department, created on June 22, 1869, by an Act respecting the Department of Finance (32-33 Vict., c. 4), is under the authority of the Minister of Finance. The Department is responsible for the financial administration of Canada including raising the money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all Government disbursements.

The work of the Department is organized in seven principal Divisions: Administration, Financial Administration and Accounting Policy, Superannuation, Treasury Board, Taxation, Economic Policy, and International Economic Relations. The Royal Canadian Mint is a branch of the Department and the Inspector General of Banks is an officer of the Department.

The Tariff Board and the Canadian Farm Loan Board are responsible to Parliament through the Minister of Finance.

Department of Fisheries.—The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulations of coastal and freshwater fisheries is with the Federal Department of Fisheries.

The work of the Department includes: conservation and development of the fisheries through the enforcement of fishing regulations, the operation of fish culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry. The Department administers the Fishermen's Indemnity Plan to assist fishermen in the event of loss or serious damage to their fishing vessels or lobster traps.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is represented on these International Commissions: Pacific Salmon Fisheries, Pacific Halibut, the Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, and Great Lakes Fisheries, and participates in an international agreement controlling the take of Pribilof seals.

Fisheries Research Board.—The Fisheries Research Board operates under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53). It has been active as a fisheries research body since 1898, first as Board of Management of the Canadian Marine Biological Station and later (1912) as the Biological Board of Canada.

The Board operates under the Minister of Fisheries and membership consists of a full-time Chairman and up to 18 members appointed by the Minister from among leading Canadian scientists and businessmen with a knowledge of fishery problems.

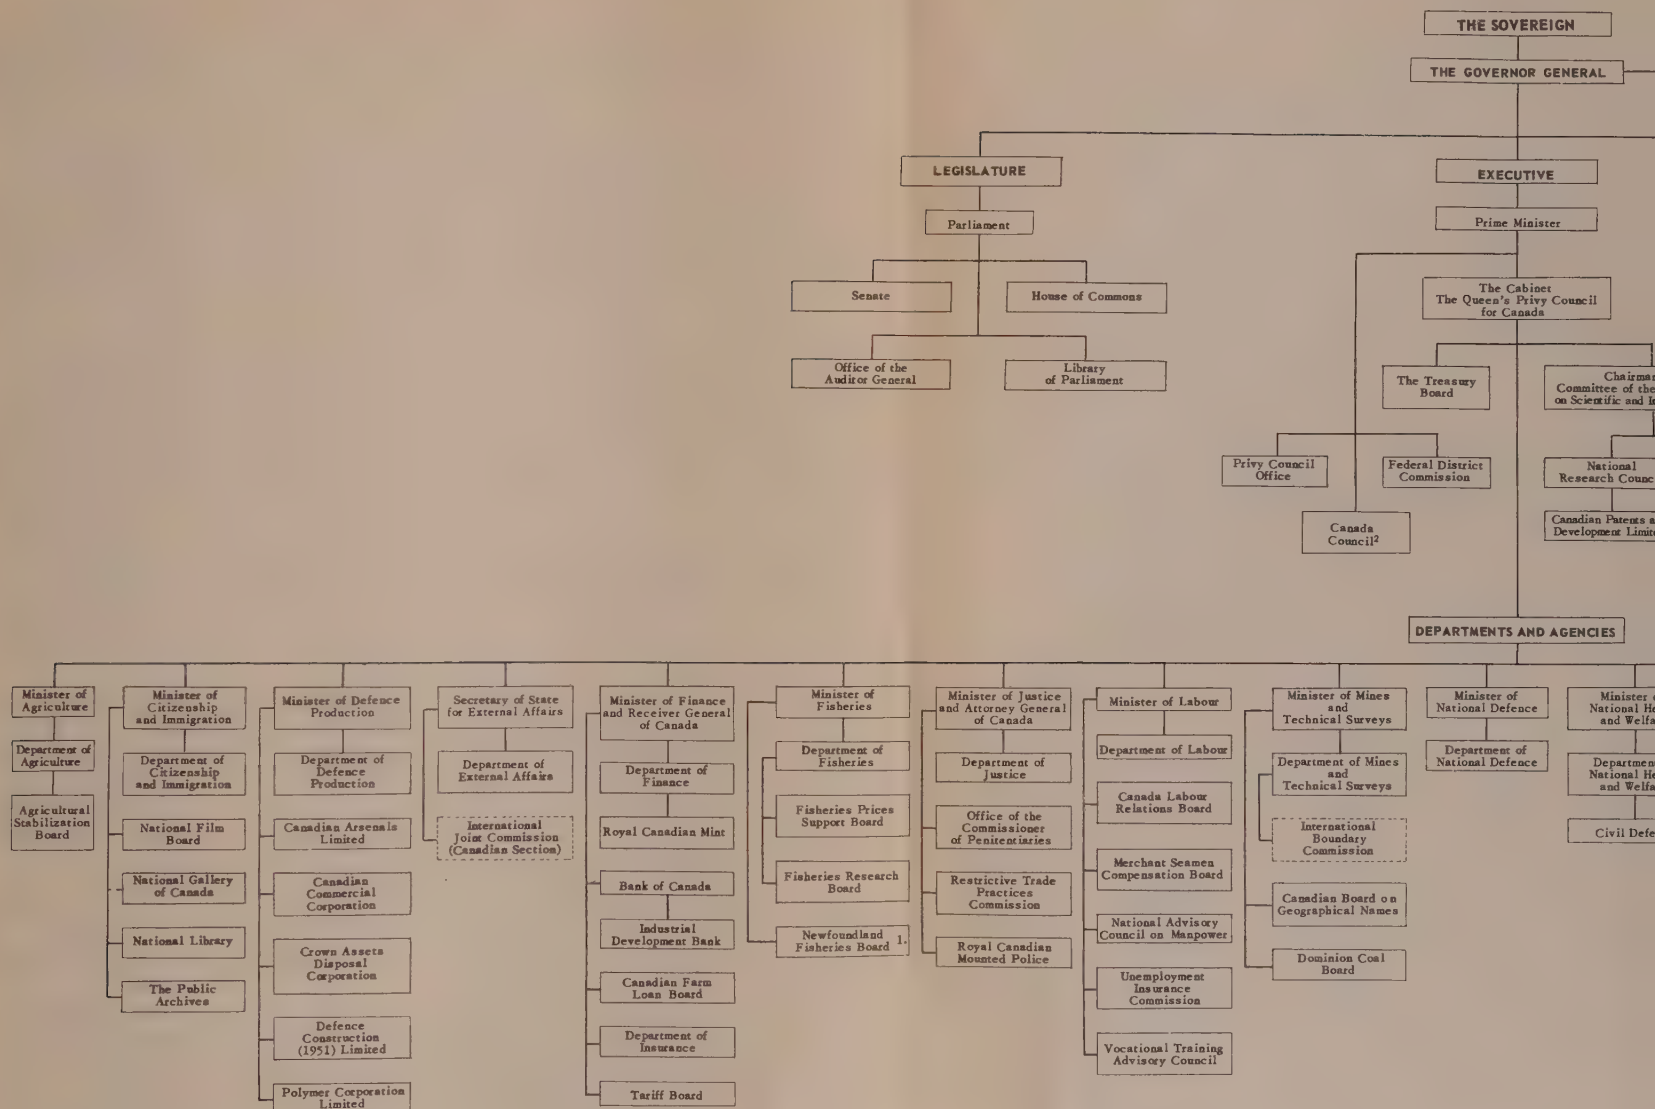

The Board operates five biological stations across Canada, four technological stations and two oceanographic groups. It serves as the scientific arm of the Department of Fisheries and its principal objective is to increase the scope and value of Canadian fisheries through scientific research.

Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (R.S.C. 1952, c. 70). Under the Superintendent of Insurance, the Department administers the statutes of Canada applicable to: insurance, trust and loan companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; and Civil Service insurance.

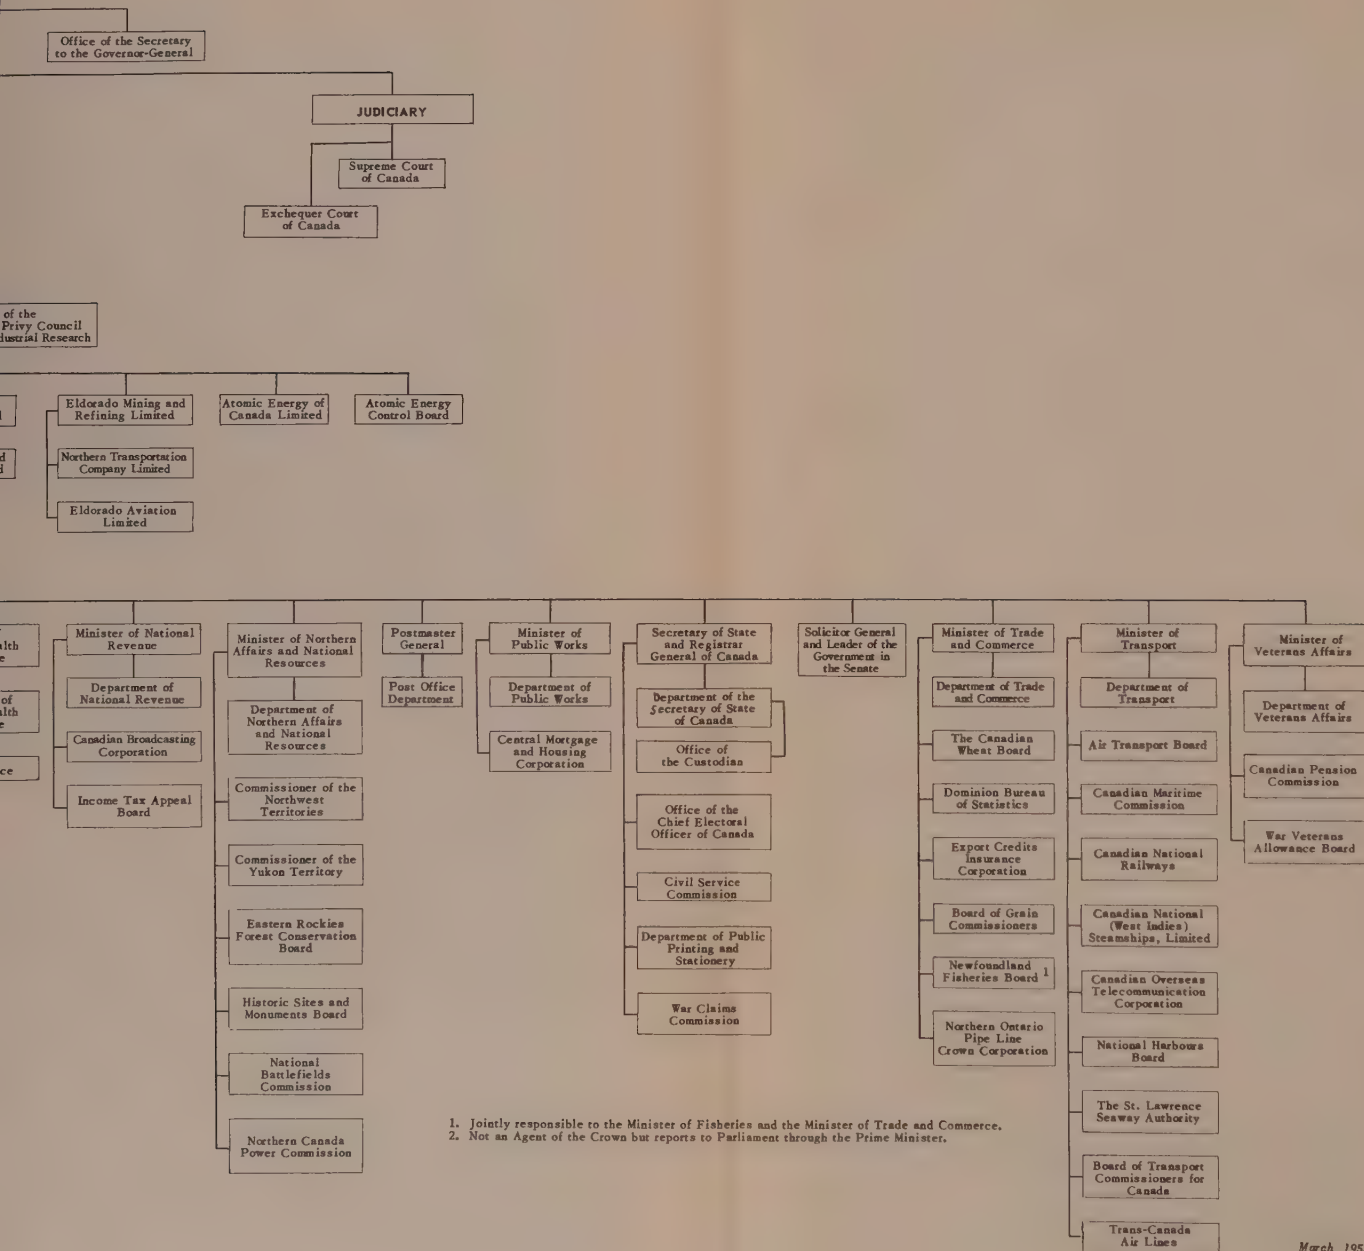

Under the relevant provincial statutes the Department examines provincial trust companies in the Provinces of Manitoba and New Brunswick and loan and trust companies in the Province of Nova Scotia.

International Joint Commission.—This Commission was established under a joint Canada-United States treaty, Jan. 11, 1909, ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Canadian Cabinet) is governed by five specific Articles of the Boundary Waters Treaty of 1909 which include the right of approval of all matters affecting the natural level or flow of boundary waters on either side of the International Boundary and the power to pass on all applications for works contemplated in waters flowing from or in boundary waters which would change the natural level.

THE GOVERNMENT OF CANADA

Note: Lines of responsibility are often inconclusive, since certain semi-independent agencies, through each responsible to a Minister of the Crown, are administered as departmental branches.

1. Jointly responsible to the Minister of Fisheries and the Minister of Trade and Commerce.
 2. Not an Agent of the Crown but reports to Parliament through the Prime Minister.

Problems arising from the common frontier are also referred to the Commission by either country for examination and report; in such cases, the Commission's decisions are in the nature of recommendations. The International Joint Commission has, however, judicial powers and can render decisions on problems or questions of difference between the two countries providing both consent to be bound by its judgment. These problems need not be connected with the common frontier. The Commission reports to Parliament through the Secretary of State for External Affairs.

Department of Justice.—This Department, established by 31 Vict., c. 39 (1868), now operates under authority of the Department of Justice Act (R.S.C. 1952, c. 71). It provides legal services to the Government and various government departments including preparing and settling government legislation, settling instruments issued under the Great Seal, regulating and conducting litigation for or against the Crown, superintending the acquisition of property and prosecutions under federal legislation other than the Criminal Code, administers federal statutes dealing with legal matters and provides administrative services for the Supreme Court of Canada and the Exchequer Court. The Department also superintends the penitentiaries and administers the prison system of Canada.

Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (63-64 Vict., c. 24) and now operates under authority of the Department of Labour Act (R.S.C. 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; reinstatement in civil employment; female employees equal pay; government annuities; government employee compensation; merchant seamen compensation; vocational training; promotion of labour-management co-operation services; co-ordination of services for rehabilitation of disabled civilians. The Department publishes the *Labour Gazette* and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The Unemployment Insurance Commission, which also maintains the National Employment Service, reports to the Minister of Labour. The Canada Labour Relations Board acts on behalf of, and the National Advisory Council on Manpower acts in an advisory capacity to the Minister of Labour and the Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization.

Department of Mines and Technical Surveys.—This Department was created by an Act of Parliament (13 Geo. VI, c. 17) which received Royal Assent on Dec. 10, 1949. Its establishment resulted from the reorganization of certain former departments. The Department's primary function is to provide technological assistance in the development of Canada's mineral resources through investigations, studies and research in the fields of geology, mineral dressing and metallurgy, and of geodetic, topographic and other surveys. The Department is under the Minister of Mines and Technical Surveys and is divided into five branches: the Surveys and Mapping Branch, the Geological Survey of Canada, the Mines Branch, the Dominion Observatories, and the Geographical Branch.

The Department also administers the Explosives Act which regulates the manufacture, testing, sale, storage and importation of explosives, and the Emergency Gold Mining Assistance Act which provides cost-aid assistance to the Canadian gold industry.

Boards and Commissions are: Canadian Board on Geographical Names; Board of Examiners for Dominion Land Surveyors; International Boundary Commission and Interprovincial Boundary Commissions.

Department of National Defence.—The Department of National Defence was established on Jan. 1, 1923, by the Department of National Defence Act, 1922, and was an amalgamation of the Departments of Militia and Defence, the Naval Service and the Air Board. The Department and the Armed Services now operate under the National Defence Act (R.S.C. 1952, c. 184).

In 1940 additional Ministers for Naval and Air Services were appointed and the Department was organized under a Minister of National Defence and two additional Ministers so that there was a Minister and staff for each of the Armed Services. Upon demobilization of the wartime forces the appointment of Ministers of National Defence for Naval Services and Air Service ceased and the Armed Forces were, in 1946, again administered by the Minister of National Defence without additional ministers. In 1953 under authority of an amendment to the National Defence Act an Associate Minister of National Defence was appointed, but in 1954 this appointment became vacant and the Department is again administered solely by the Minister of National Defence.

Department of National Health and Welfare.—This Department was established in October 1944 under the authority of the Department of National Health and Welfare Act (R.S.C. 1952, c. 74). The Department, headed by the Minister of National Health and Welfare, is composed of three branches—Health, Welfare, and Administration—and is administered through two Deputy Ministers.

The Health Branch is divided into three directorates—Health Services, Food and Drugs, and Indian Health Services. It has 14 Divisions active in certain public health fields divided into five main groups—Medical Advisory, Research Development, Environmental Health, Health Insurance Studies, and Health Grants Administration—each of which is headed by a Principal Medical Officer.

The Welfare Branch is made up of the Divisions of Family Allowances and Old Age Security, Old Age Assistance, and Blind and Disabled Persons Allowances. The Department is also responsible for federal civil defence planning, with the Civil Defence Co-ordinator reporting to both Deputy Ministers. The Administration Branch includes divisions where activities cover both health and welfare fields, such as research, information, legal and library services, as well as administrative, personnel and purchasing and supply services.

National Film Board.—The National Film Board was established in 1939 and the National Film Act (R.S.C. 1952, c. 185) provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is Chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through a designated Minister of the Crown (at present the Minister of Citizenship and Immigration). The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and in particular films “designated to interpret Canada to Canadians and to other nations”.

National Library.—The National Library Act, proclaimed Jan. 1, 1953, brought the National Library into being. Though at an early stage of organization, the Library publishes *Canadiana*—a monthly catalogue of new publications relating to Canada—and work is well advanced on a national union catalogue to serve as a key to the contents of all important libraries in Canada. The National Librarian reports to the Minister of Citizenship and Immigration.

Department of National Revenue.—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of National Revenue and under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as sales and excise taxes, by ports and outposts. The Taxation Division is responsible for the assessment and collection of income taxes and succession duties by 29 district offices throughout Canada.

The Minister of National Revenue is responsible to Parliament for the Income Tax Appeal Board and also reports to Parliament for the Canadian Broadcasting Corporation.

Department of Northern Affairs and National Resources.—The Department of Northern Affairs and National Resources was established in December 1953, superseding the Department of Resources and Development. In addition to Administration Services, which performs auxiliary functions, the Department is divided into seven branches: the National Parks Branch administers the National Parks and National Historic Parks of Canada, National Historic Sites, and wildlife matters coming within the jurisdiction of the Federal Government; the Water Resources Branch is responsible for the investigation of water power resources, for the administration of federal assistance to the provinces under the Canada Water Conservation Assistance Act and for federal interests in certain joint federal-provincial construction projects; the Northern Administration and Lands Branch is responsible for the administration of various Federal Acts, Territorial ordinances and regulations pertaining to the government of the Northwest Territories, for the conduct of certain business arising from the general administration of the Yukon Territory, for the administration of natural resources in those Territories, and for Eskimo affairs, as well as for certain lands and mineral rights in the provinces vested in the Crown in the right of Canada; the Forestry Branch conducts investigations in the protection and utilization of the forest resources of Canada, maintains forest experiment stations and forest products laboratories and administers federal assistance to the provinces under the Canada Forestry Act; the Natural History Branch and Human History Branch of the National Museum of Canada are responsible for research, publication of scientific studies, and public exhibitions in their respective fields of natural history and human history; and the Canadian Government Travel Bureau promotes the tourist industry by encouraging tourist travel in Canada.

The Minister of Northern Affairs and National Resources is also responsible to Parliament for the Eastern Rockies Forest Conservation Board, the Northern Canada Power Commission, and the National Battlefields Commission. The Historic Sites and Monuments Board of Canada, an honorary body of recognized historians representing the various provinces, and the Advisory Board on Wildlife Protection act in an advisory capacity to the Minister in those fields. The Deputy Minister is Commissioner of the Northwest Territories.

Post Office Department.—Administration and operation of the Canada Post Office, by virtue of the Post Office Act (R.S.C. 1952, c. 212) and under the Postmaster General, includes all phases of postal activity, personnel, mail handling, postal accommodation, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of money order and savings bank business.

Public Archives.—The Public Archives was founded in 1872 and is administered under the Public Archives Act (R.S.C. 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister, and reports to Parliament through the Minister of Citizenship and Immigration. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed on official records of the Government and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs.

Department of Public Printing and Stationery.—This Department was established in 1886 and is in the charge of the Queen's Printer and Controller of Stationery.

The Department is responsible for supplying all requirements of printing and stationery to Parliament and Departments of the Canadian Government; the distribution and sale of government publications; the publication of the *Canada Gazette*, and all departmental reports, papers, etc., required to be published by authority of the Governor General in Council (R.S.C. 1952, c. 226) and the publication of the Statutes of Canada (R.S.C. 1952, c. 230).

The Department of Public Printing and Stationery is under the jurisdiction of the Secretary of State.

Department of Public Works.—This Department was constituted in 1867 and operates under the legislative authority of the Public Works Act and other Acts of Parliament. It is responsible for the management, charge and direction of the public works of Canada and except as specifically provided in other Acts attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and navigable waters protection work. The Department maintains architectural and engineering staffs in each province in addition to the Administrative, Architectural, Engineering and Purchasing and Stores Branches at Ottawa. In 1954 the Fire Prevention Branch of the Department of Insurance was transferred to the Department of Public Works. This branch was organized in 1919 and has, since that time, maintained fire-loss records, made inspections, reported on fire protection legislation and protection methods and endeavoured to extend and co-ordinate fire prevention work in Canada.

The Minister of Public Works is responsible to Parliament for the Central Mortgage and Housing Corporation and for federal interests in the Trans-Canada Highway.

Department of the Secretary of State.—The Secretary of State and Registrar General of Canada is the official medium of communication with the Throne through the Governor General, as well as the custodian of the federal and provincial governments through the Lieutenant-Governors, and is the custodian of the Great Seal of Canada and of the Privy Seal of the Governor General. He is responsible for the preparation and tabling of returns in Parliament. He administers legislation relating to patents of invention, trade marks, industrial designs, timber marking, copyright, companies, boards of trade, the registration of trade unions, public officers, public documents and governmental and parliamentary translations. He is also the Custodian of Enemy Property.

The Secretary of State has certain responsibilities with respect to civilian decorations, precedence and ceremonial. The Committee on the use of Parliament Hill and the National War Memorial falls within his purview. He is the Minister of the Department of Public Printing and Stationery and the spokesman in Cabinet and Parliament for the Civil Service Commission and the Chief Electoral Officer.

Trade and Commerce.—The Department of Trade and Commerce was established by Act of Parliament on June 23, 1887, but did not function until Dec. 5, 1892, when an Order in Council to this effect was passed. Before the formation of the Department, assistance in the development of Canada's external trade was provided by eight Canadian Commercial Agents—five in the West Indies, two in Great Britain and one in France—who served on a part-time basis and were responsible to the Minister of Finance. In 1895 a Canadian Commercial Agent was appointed at Sydney, Australia, as the first full-time salaried Agent of the Department.

The framework of the present Trade Commissioner Service emerged during the next decade or so, the Commercial Agents gradually giving place to career Trade Commissioners. There are now 121 Trade Commissioners serving at Headquarters and abroad in 55 posts (including Assistant Trade Commissioners and agricultural, fisheries and timber specialists). Where Trade Commissioners are members of a mission maintained by the Department of External Affairs they hold diplomatic status and are known as Commercial Counsellors or Commercial Secretaries.

The Department provides a wide range of services to Canadian businessmen. It comprises: the Canadian Trade Commissioner Service, Commodities Branch (including the Transportation and Trade Services Division), Agriculture and Fisheries Branch, International Trade Relations Branch, Information Branch, Industrial Development Branch, Economics Branch, Standards Branch, International Economic and Technical Co-operation Division and the Canadian Government Exhibition Commission.

The following boards, commissions, Crown companies and agencies report to Parliament through the Minister of Trade and Commerce—seven of them through his capacity as Chairman of the Privy Council Committee on Scientific and Industrial Research: Board of Grain Commissioners, Canadian Wheat Board, Dominion Bureau of Statistics, Export Credits Insurance Corporation, Northern Ontario Pipe Line Crown Corporation, Trans-Canada Air Lines, Atomic Energy Control

Board, Atomic Energy of Canada Limited, Canadian Patents and Development Limited, National Research Council, Eldorado Mining and Refining Company Limited, Eldorado Aviation Limited, and Northern Transportation Company Limited.

Department of Transport.—The Department was created on Nov. 2, 1936, from the former Department of Marine, Railways and Canals and the Civil Aviation Branch of the Department of National Defence (R.S.C. 1952, c. 79).

The work of the Department consists of four main Services: Marine, Air, Canals and Railways. The work of the Marine Service includes aids to navigation, nautical and pilotage services, marine agencies, steamship inspection and floating equipment and direct supervision over 300 public harbours; seven other harbours come under supervision of the Department but are administered by Commissions. Air Services cover the operation of civil aviation, meteorological and telecommunication branches. The latter includes the administration and regulation of radar, radio marine and radio aeronautical aids to navigation and communication by wire and by government telegraph and telephone. The Canal Service has jurisdiction over the canals and canalized waterways of Canada. These include the main or primary canals on the St. Lawrence River and Great Lakes and a number of subsidiary or secondary canals.

Other services of the Department are in connection with the Government owned companies: the Canadian National Railways, Hudson Bay Railway, Canadian Government Railway, Canadian National (West Indies) Steamship Service and the Prince Edward Island Ferry and Terminals.

The Minister of Transport is responsible to Parliament for the following boards and commissions: the Air Transport Board; Board of Transport Commissioners; Canadian Maritime Commission; Steamship Inspection Board; National Harbours Board; Park Steamship Company Limited; Canadian National Railway Securities Trust; the St. Lawrence Seaway Authority; and the Canadian Overseas Telecommunication Corporation.

Department of Veterans Affairs.—This Department, established in 1944 (R.S.C. 1952, c. 80), is concerned exclusively with the welfare of veterans and includes medical, dental and welfare services, land settlement and prosthetic services and insurance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Minister of Veterans Affairs is also responsible for the Canadian Pension Commission and the War Veterans Allowance Board. The Department has administrative offices in all the larger cities across Canada and at London, England.

Section 2.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purpose and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the new legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation: departmental, agency and proprietary.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Ten departmental corporations are listed in Schedule B to the Act:—

- Agricultural Prices Support Board
- Atomic Energy Control Board
- Canadian Maritime Commission
- Director of Soldier Settlement
- The Director, The Veterans' Land Act
- Dominion Coal Board
- Fisheries Prices Support Board
- National Gallery of Canada
- National Research Council
- Unemployment Insurance Commission.

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act or have been subsequently added to that Schedule by the Governor in Council:—

- Atomic Energy of Canada Limited
- Canadian Arsenals Limited
- Canadian Commercial Corporation
- Canadian Patents and Development Limited
- Crown Assets Disposal Corporation
- Defence Construction (1951) Limited
- Federal District Commission
- National Battlefields Commission
- Northwest Territories Power Commission (now Northern Canada Power Commission)
- National Harbours Board
- Park Steamship Company Limited.

Two corporations, Canadian Sugar Stabilization Corporation Limited and Commodity Prices Stabilization Corporation Limited, listed in Schedule C when the Financial Administration Act was proclaimed, have since discontinued operations and surrendered their charters. By an Order in Council of June 15, 1955, the name of the Northwest Territories Power Commission (now Northern Canada Power Commission) was deleted from Schedule D and added to Schedule C effective Apr. 1, 1954.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required

* Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary, the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation, as are such joint enterprises of the Federal and Provincial Governments as the Eastern Rockies Forest Conservation Board and the Halifax Relief Commission. Though not included in the Schedules to the Financial Administration Act, certain provisions of the Act apply to the Northern Ontario Pipe Line Crown Corporation, set up on June 7, 1956, to oversee the building of a cross-country natural gas pipeline. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act.

to conduct its operations without Parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act or have been subsequently added to that Schedule by the Governor in Council:—

Canadian Broadcasting Corporation
 Canadian Farm Loan Board
 Canadian National (West Indies) Steamships Limited
 Canadian Overseas Telecommunication Corporation
 Central Mortgage and Housing Corporation
 Eldorado Aviation Limited
 Eldorado Mining and Refining Limited
 Export Credits Insurance Corporation
 National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
 Northern Transportation Company Limited
 Polymer Corporation Limited
 The St. Lawrence Seaway Authority
 Trans-Canada Air Lines.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds either to the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings. Under a special financing arrangement a 15 p.c. excise tax charged on radio and television sets and their parts and accessories has been allocated to the revenue of the Canadian Broadcasting Corporation.

Prior to 1952 Crown corporations did not pay corporate income taxes. However the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them further details are included in the Chapters dealing with the subjects concerned (*see Index*).

Agricultural Prices Support Board.—The Board was established in 1944 (R.S.C. 1952, c. 3) to assist in stabilizing the prices of agricultural products. The Board reports to Parliament through the Minister of Agriculture.

Atomic Energy Control Board.—In December 1946, by Act of Parliament (R.S.C. 1952, c. 11), the regulation and control of atomic energy in Canada were placed under the Atomic Energy Control Board. The Board reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Atomic Energy of Canada Limited.—This Crown Company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (R.S.C. 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952, the operation of the Chalk River project. The main functions of the Company are the research into many aspects of atomic energy, the operation of atomic reactors and the extraction, processing and marketing of the by-products of the reactors. The Company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Bank of Canada.—Legislation of 1934 (R.S.C. 1952, c. 13) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (See footnote, p. 85.)

The Canada Council.—Established by Order in Council dated Apr. 15, 1957, this Corporation of 21 members, a Director and an Associate Director functions under the terms of the Canada Council Act, assented to Mar. 28, 1957. Its functions are the encouragement of the arts, humanities and social sciences in Canada. Its work will be financed from the earnings of a \$50,000,000 Endowment Fund and a \$50,000,000 University Capital Grants Fund. In the making, managing and disposing of investments under the Act, the Council will have the advice of an Investment Committee of five, including the Chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through a member of the Queen's Privy Council for Canada.

Canadian Arsenals Limited.—This Company was established under the Companies Act by Letters Patent dated Sept. 20, 1945, and is subject to the Government Companies Operation Act (R.S.C. 1952, c. 133) and certain provisions of the Financial Administration Act (R.S.C. 1952, c. 116). The Company was set up to take over and operate Crown-owned plant and equipment. Among the items it now manufactures are propellants and explosives, small arms, radar equipment, and a wide variety of ammunition and components. Its divisions, together with the location of their plants, are as follows: Dominion Arsenal Division (Quebec and Val Rose, Que.); Explosives Division (Valleyfield, Que.); Filling Division (St. Paul l'Ermite, Que.); Gun Ammunition Division (Lindsay, Ont.); Small Arms Division (Long Branch, Ont.); Instrument and Radar Division (Scarborough, Ont.). The Company is responsible to Parliament through the Minister of Defence Production.

Canadian Broadcasting Corporation.—Legislation passed in 1936 (R.S.C. 1952, c. 32) provides that there shall be a corporation, to be known as the Canadian Broadcasting Corporation, to consist of a Board of 11 Governors appointed by the Governor in Council and chosen to give representation to the principal geographic divisions of Canada. The Board of Governors determines CBC policy and the Chairman of the Board is required to devote the whole of his time to the performance of his duties under the Act.

The General Manager is the Chief Executive of the Corporation and directs the operations and activities of the Corporation as well as the application of CBC policy as determined by the Board of Governors. He is assisted by regional management representatives located in the principal geographic regions of Canada (Newfoundland, the Maritime Provinces, Quebec, Ontario, the Prairie Provinces and British Columbia), and at Head Office by specialists in Programs, Sales, Operations, Administration, Finance, Engineering and Public Relations. Under the Canadian Broadcasting Act, the Corporation reports to Parliament through a Minister of the Crown (at present the Minister of National Revenue).

Canadian Commercial Corporation.—This Corporation was established on May 1, 1946, by the Canadian Commercial Corporation Act (R.S.C. 1952, c. 35). It purchases goods and commodities in Canada for the governments of other countries. It also acts as purchasing agent for international agencies such as the United Nations International Children's Emergency Fund and the United Nations Korean Reconstruction Agency. Other functions include arranging production and shipment of Canadian contributions of military stores to NATO countries. The Corporation also serves other departments of the Government of Canada. For instance it arranges for the purchase and production of supplies and services which the Department of Trade and Commerce is making available to other countries under the Colombo Plan. In carrying out its functions the Corporation works closely with the Department of Defence Production. It is responsible to Parliament through the Minister of Defence Production.

Canadian Farm Loan Board.—The Board was organized in 1929 to make loans to farmers secured by mortgage. The Board is responsible to Parliament through the Minister of Finance.

Canadian Maritime Commission.—The Commission was created in 1947 (R.S.C. 1952, c. 38) to consider and recommend policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a ship building and ship repairing industry. The Commission is responsible to Parliament through the Minister of Transport. (See also Park Steamship Company Limited, p. 90.)

Canadian National Railways.—Operating under an Act to incorporate the Canadian National Railway Company (1919), brought into effect by Order in Council of Jan. 30, 1923, the Canadian National Railways comprised at that time the old Intercolonial Railway and various eastern branch lines (all embraced in the Canadian Government Railways which were turned over to the

Canadian National Board for management and operation), the Canadian Northern Railway (1918) and the Grand Trunk Pacific (1923). The Hudson Bay Railway has been operated by the Canadian National Railways for the Canadian Government since 1935 and a separate accounting is made. Additional lines have been built or acquired and are operated by the Canadian National Railways. The Newfoundland Railway was entrusted to the Canadian National Railway Company in 1949 for operation and management. The CNR is controlled by a Chairman and Board of Directors and is responsible to Parliament through the Minister of Transport.

Canadian National (West Indies) Steamships Limited.—Through the medium of this Crown Company, the Federal Government provides direct steamship services to the West Indies in conformity with the Canada-West Indies Trade Agreement of 1926. The Company is responsible to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown Company was created on Dec. 10, 1949, by Act of Parliament (R.S.C. 1952, c. 42) to acquire for public operation all external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement, signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.—Canadian Patents and Development Limited is a Crown Corporation established in 1948, pursuant to authority granted in an amendment to the Research Council Act which was passed in 1946. The primary purpose of the Company is to make available to industry, through licensing arrangements, new processes developed by scientific workers of the National Research Council. Its services are equally available to other Government Departments, publicly supported institutions and universities. The Company also has cross-agency arrangements with similar government agencies in other Commonwealth countries. The Board of Directors is composed of representatives from the National Research Council, from Government Departments and from industry and the universities. Any profits that the Company may derive from licensing arrangements are available for further research and development. The Corporation reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research. At the present time this is the Minister of Trade and Commerce.

Canadian Wheat Board.—The Board was incorporated under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat, but since Aug. 1, 1949, it may also buy oats and barley. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation. (See footnote, p. 85.) It reports to Parliament through the Minister of Trade and Commerce.

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament (R.S.C. 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (2-3 Eliz. II, c. 23, as amended by 1956, c. 9), the Corporation insures mortgage loans made by approved lenders for home ownership and rental housing, makes direct loans, provides home improvement and rental guarantees, undertakes jointly with provincial governments the assembly of land and the construction of housing projects, conducts housing research, co-ordinates community planning and owns and manages rental housing units built for war workers and veterans. The Corporation also arranges for and supervises the construction of housing projects on behalf of the Department of National Defence. The Corporation is responsible to Parliament through the Minister of Public Works.

Crown Assets Disposal Corporation.—This Corporation is established under the Surplus Crown Assets Act (R.S.C. 1952, c. 260) and is subject to the Financial Administration Act (R.S.C. 1952, c. 116). In June 1944 War Assets Corporation was established by statute to replace War Assets Corporation Limited which had been incorporated in 1943. In 1949 the name of War Assets Corporation was changed to Crown Assets Disposal Corporation. The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Defence Production.

Defence Construction (1951) Limited.—This Company was established by Letters Patent in 1951 to take over the general undertakings of Defence Construction Limited. The Company carries out all defence construction with the exception of houses and aircraft runways and is responsible to Parliament through the Minister of Defence Production.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in either capacity is legally a corporation sole. For administrative purposes however the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.—The Board, created in 1947 under the Dominion Coal Board Act (R.S.C. 1952, c. 86), is charged with the duty of studying and recommending to the Government policies respecting the production, importation, distribution and use of coal in Canada. It also administers transportation subventions, other subsidies relating to coal and loans authorized under the Maritime Coal Production Assistance Act (R.S.C. 1952, c. 170). The Board reports to Parliament through the Minister of Mines and Technical Surveys.

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that area of the eastern slope of the Rocky Mountains which forms part of the watershed of the Saskatchewan River. The function of the Board is to plan, supervise and undertake construction, operation and maintenance of projects and facilities necessary for the proper protection of the forests of the area to obtain the greatest possible flow of water in the Saskatchewan River and its tributaries.

During the first seven years of the agreement the Federal Government undertook to provide \$6,300,000 for capital expenditure and Alberta to provide funds for maintenance expenditures. During the period of capital expenditure the Federal Government agreed to appoint the Chairman and one member and the Province one member. After the capital period the arrangement was that the Federal Government appoint one member and that the Government of Alberta appoint two members and name one of the three as Chairman. This latter arrangement became effective on Apr. 1, 1955, and the Province of Alberta is now responsible for all future capital and maintenance costs of this area. The Board reports to Parliament through the Minister of Northern Affairs and National Resources. (See footnote, p. 85.)

Eldorado Aviation Limited.—Incorporated Apr. 23, 1953, to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited, the Company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Eldorado Mining and Refining Limited.—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted from the name in June 1952), the Company's business is that of mining and refining uranium ores in Canada. The Company is also the Government purchasing agent for all uranium produced in Canada. It reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Export Credits Insurance Corporation.—This Company commenced operations in 1945 under the Export Credits Insurance Act, 1944 (R.S.C. 1952, c. 105) and is administered by a Board of Directors (including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada) with the advice of an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation reports to Parliament through the Minister of Trade and Commerce.

Federal District Commission.—This Commission had its genesis in the Ottawa Improvement Commission, established by Parliament in 1899 to improve and beautify the National Capital by the development and construction of parks and driveways and to co-operate with the City of Ottawa in local improvement and conservation. Its membership is honorary in character and is appointed by the Governor in Council, and it reports to the Prime Minister. In 1927 the organization's name was changed to the Federal District Commission, its scope of operations widened to include adjacent areas, and its membership increased to ten. Under the FDC Act, one representative each of the cities of Ottawa and Hull (usually the mayor) is included in its membership.

The Commission maintains the grounds of all federal buildings in the National Capital area and landscapes the grounds of new government buildings. In the Ottawa-Hull area (exclusive of Gatineau Park), the Commission has developed over 3,000 acres of urban parks and 22 miles of scenic driveways.

In 1946 the Commission became the federal agency responsible for carrying out the National Capital Plan. Commission approval is required for the location, siting and exterior design of new federal buildings or for alterations to existing structures. The membership was further increased to permit the appointment of a commissioner resident in each of the provinces and a separate honorary committee was established by the Commission to advise on the development of Gatineau Park. The National Capital Fund, to which Parliament has made annual grants of \$2,500,000 since its inception in 1948, was made available to the Commission to execute the work of the National Capital Plan and a National Capital Planning Committee was appointed to act as a permanent honorary advisory body to the Commission on the implementation of the Plan.

Fisheries Prices Support Board.—The Board was set up in July 1947 (R.S.C. 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a Chairman, who

is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Halifax Relief Commission.—The Commission, a joint enterprise of the Legislature of Nova Scotia (Statutes of N.S., 1918, c. 61) and the Parliament of Canada (Statutes of Canada, 1918, c. 24), was incorporated to administer relief funds contributed for the assistance of sufferers in consequence of the disastrous explosion at Halifax, Dec. 17, 1917. (*See* footnote, p. 85.)

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (*See* footnote, p. 85.)

National Battlefields Commission.—This Commission was established by Act of Parliament in 1908 to preserve the historic battlefields at Quebec City. The Commission is composed of nine members, seven being appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by an annual statutory grant from the Federal Government and is responsible to Parliament through the Minister of Northern Affairs and National Resources.

National Gallery.—The National Gallery was founded in 1880. By Act of Parliament in 1913 and re-enacted in 1951 it was placed under the management of a Board of Trustees appointed by the Governor General in Council and now operates under the National Gallery Act (R.S.C. 1952, c. 186). It is responsible to Parliament through a Minister of the Crown (at present the Minister of Citizenship and Immigration).

The first charge of the National Gallery is the development and care of the national art collections. Other important services are the arrangement of loans and exhibitions from abroad and, from its own holdings for showing in Canada and abroad, the promotion of good industrial design and general extension work consisting of the distribution of reproductions for educational purposes, lectures, educational tours, publications, school broadcasts and art films.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver, and Churchill. The Board is responsible to Parliament through the Minister of Transport.

National Research Council.—In 1917 the Research Council Act was passed and in 1928 laboratories for scientific research were established at Ottawa. The National Research Council now has Divisions of Pure and Applied Chemistry, Building Research, Mechanical Engineering, Radio and Electrical Engineering, Pure and Applied Physics, Applied Biology and Medical Research. Regional laboratories have been established at Saskatoon, Sask., and Halifax, N.S.

Patentable processes and improvements developed by the Council are made available under licence to industry through a Crown company, Canadian Patents and Development Limited, and any profits from the licensing arrangements are used for further research and development.

The Minister of Trade and Commerce as Chairman of the Privy Council Committee on Scientific and Industrial Research is responsible to Parliament for the National Research Council.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed. The Company is responsible to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Northern Canada Power Commission.—The Commission was established by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. The Act was amended in 1950 to give authority to the Commission to provide similar services in Yukon Territory; the name of the Commission, formerly Northwest Territories Power Commission, was changed in 1956. The Commission is composed of a Chairman and two members appointed by the Governor in Council. It operates hydro-electric plants on the Snare River in the Northwest Territories and on the Mayo River in Yukon Territory and diesel-electric plants at Fort Smith and Fort Simpson, N.W.T. Additional plants are under construction at Whitehorse, Yukon, and Aklavik, N.W.T. The Minister of Northern Affairs and National Resources reports to Parliament for the Commission.

Park Steamship Company Limited.—After World War II this Company acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of Government war built ships. This work is completed but the Company remains available to carry out any appropriate duties. It has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission (*see* p. 85). The Company reports to Parliament through the Minister of Transport.

Polymer Corporation Limited.—This Corporation was established in 1942 by Letters Patent under the Companies Act and is subject to the Government Companies Operation Act (R.S.C. 1952, c. 133) and the Financial Administration Act (R.S.C. 1952, c. 116). It was set up to construct and operate a synthetic rubber plant which now produces a variety of synthetic rubber products and some chemicals. The plant is located at Sarnia, Ont. The Company is responsible to Parliament through the Minister of Defence Production.

St. Lawrence Seaway Authority.—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (R.S.C. 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority is incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Authority is composed of a President, a Vice-President and a Member and reports to Parliament through the Minister of Transport.

Trans-Canada Air Lines.—TCA came into being by Act of Parliament in 1937 (R.S.C. 1952, c. 268) to provide for the development of a publicly owned scheduled transcontinental air service. Transatlantic air services were inaugurated by TCA on behalf of the Canadian Government during World War II and scheduled operations were commenced at the end of the War. TCA now maintains passenger, mail and commodity traffic services over nationwide routes and also services to the United States, England, Scotland, Ireland, France, West Germany, Bermuda, the Bahamas, Jamaica, Barbados and Trinidad. TCA is responsible to Parliament through the Minister of Trade and Commerce.

Unemployment Insurance Commission.—The Commission was appointed on Sept. 24, 1940, under the provisions of the Unemployment Insurance Act, 1940 (R.S.C. 1952, c. 273) for the purpose of administering the Act and providing a national employment service. It is composed of three Commissioners—a Chief Commissioner, a Commissioner appointed after consultation with organizations representative of workers, and another after consultation with organizations representative of employers. Each Commissioner, including the Chief Commissioner, holds office for a period not exceeding ten years. The Commission is responsible to Parliament through the Minister of Labour.

Section 3.—Acts Administered by Federal Departments*

List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—Copies of individual Acts of Parliament and amendments may be obtained from the Queen's Printer, Ottawa, at prices of from 10 cents to \$1.50 per copy according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered under the Departments given.

PART IV.—FEDERAL GOVERNMENT EMPLOYMENT

The Civil Service Commission.*—The Federal Civil Service comprises, in the widest sense, all servants of the Crown—other than those holding political or judicial office—who are employed in a civil capacity and whose remuneration is paid wholly and directly from moneys voted by Parliament. Collectively they form the staffs of the various departments, commissions, boards, bureaux and other agencies of the Federal Government. Nearly every category of occupation is represented in the Civil Service. A few civil servants are appointed by one or both Houses of Parliament directly and a considerable number are appointed by departments and other agencies in accordance with the provisions of certain statutes, generally with executive approval of the Governor in Council. The remainder, by far the majority, are selected and appointed by the Civil Service Commission of Canada.

The Civil Service Commission as the central personnel agency of the Federal Government is the custodian of the merit principle in respect of both initial appointments and promotions. The steps by which the Commission came to be constituted in its present form is the record of Civil Service reform in Canada which began a year after Confederation and culminated in the passing of the Civil Service Act of 1918.

Recruitment.—The recruitment of civil servants is conducted by means of open competitive examination through which every citizen has the right to compete for positions in the service of his country. Examinations are held periodically as the staff requirements of the public service dictate. Any Canadian citizen may apply for headquarters positions open at Ottawa but applicants for local positions must be residents of the locality in which the vacancy occurs. Competitive examinations are announced through the press and through posters displayed on the public notice boards of post offices, offices of the National Employment Service, offices of the Civil Service Commission, public libraries and elsewhere. The examinations may be written, oral, a demonstration of skill, or any combination of these.

The names of persons successful in Civil Service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. Appointments are made as required from the eligible lists which usually remain valid for one year.

The rank of the various successful candidates on eligible lists is influenced by the 'veteran's preference'. Actually the preference is limited largely, in accordance with its definition by law, to members of the Armed Forces who have served overseas in World War I or II or in the Korean theatre of operations. The highest order of preference is the 'disability preference' accorded to pensioners of the Armed Forces who as a result of their war service are unable to re-establish themselves in a civilian occupation.

In recent years the Civil Service Commission has decentralized its operations and now has ten district offices and six sub-offices across the country. The Commission is granting an increasing measure of autonomy and responsibility to these offices to permit more efficient service to field agencies.

Staff Training.—In 1947 the Commission set up a Staff Training Division to promote and guide a systematic service-wide training scheme. The training scheme, sponsored by the Commission, is a joint venture undertaken in co-operation with Federal Government departments most of which have parallel training divisions. The Commission's Training Division is primarily a co-ordinating agent. It promotes and organizes activities, trains departmental instructors in the presentation of courses, prepares and on occasion gives courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs, and acts as a general clearing-house for the exchange of information on training matters.

* Revised by M. M. Maclean, Secretary of the Civil Service Commission of Canada, Ottawa.

Promotion.—It is a prime objective of the Civil Service Act to create a career service. The result is that promotion, like entrance to the Service, is based on merit and a sound promotion system is developing. The present procedure involves the consideration of three factors: seniority or length of service; efficiency of candidates in their present positions; and fitness for the vacant positions. An automatic rating on seniority is given by the Commission and ratings on efficiency and fitness are provided by the department concerned. Appeal machinery under Commission jurisdiction has been set up for those employees who feel that their qualifications have not been properly assessed.

Position Classification and Compensation.—Provision is made in the Civil Service Act for the classifying of positions in the public service. A system of position classification was instituted in 1919 and positions with like duties and responsibilities were classified alike and remunerated equally. Each position has a title, a set of tasks or duties which are proper to it in the organization in which it occurs and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of similar kind are grouped together under a common title to form a class and grades within the class reflect the level of responsibility.

The determination of rates of compensation for each class is a continuing responsibility of the Commission and salary and wage surveys are conducted constantly. Position classification is a mainspring in the Commission's primary function of recruitment, involving the fixing of standards of qualification for each class of position.

Organization and Methods.—In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. In 1948 the Commission set up an Organization and Methods Service to study problems of management in collaboration with officials directly responsible for major areas of administration. Briefly, this Service affords practical assistance to departments and other agencies of the Government through the systematic examination of structure, operations, procedures and work methods. Its growing facilities are offered free of charge to all departments.

Statistics of Federal Government Employment.*—The basic concept behind the survey of Federal Government employment, started in April 1952, was that it should comprehend all classes of employees (excluding members of the Armed Services but including Force members of the Royal Canadian Mounted Police) for all services of government, with separate treatment accorded "agency and proprietary corporation and other quasi-independent government bodies" because of their economic or proprietary nature; hence the title "Federal Government Employment" in contrast to the title used for the previous survey "Civil Service of Canada" with its restrictions as to services and classes of employees. Comparison with figures of previous years should be made only after careful consideration of the differences in composition of services and classification of employees.

Included in this survey as "governmental services" and reported in Tables 1, 2 and 3, are all the administrative functions of the Federal Government (*see pp. 77-84*) and all agencies, boards and commissions where the nature of the undertaking is not of a proprietary or economic character, but where payments of salaries and/or wages are by legislative appropriation from the Consolidated Revenue Fund. Statutory employees are also included as their salaries are paid from the Consolidated Revenue Fund in accordance with the terms of an Act of Parliament establishing the position.

The "classified" group embraces several classes of employees including: those who are subject to the Civil Service Act and Civil Service Superannuation Act; those not subject to these Acts but who are employed under other enabling legislation or regulations; and the statutory group, most of whom are dismissable only by an Address to both Houses of Parliament, such as members of the judiciary. Employees in the classified group are occupants of continuing salaried positions. "Prevailing rate" employees are those who occupy continuing positions which are subject to prevailing rate legislation and therefore

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

are paid on the basis of the going salary in the area in which the individual works. Prevailing Rate Employees General Regulations also are applicable to the third major group entitled "ships' officers and crews". These three groups comprise what may be called the occupants of continuing positions in the governmental services. In addition, there is a group entitled "casuals and others" which includes persons occupying positions on a non-continuing basis.

Employment of persons working in agency and proprietary corporations and other quasi-independent government bodies are detailed separately in Table 4 since they do not pay their employees from appropriations specifically designated for the payment of salaries or wages. The activities falling in this category are as follows:—

Atomic Energy of Canada Limited
Bank of Canada
Canadian Arsenals Limited
Canadian Broadcasting Corporation
Canadian Commercial Corporation
Canadian Farm Loan Board
Canadian National Railways
Canadian National (West Indies) Steamships Limited
Canadian Overseas Telecommunication Corporation
Canadian Patents and Development Limited
Canadian Wheat Board
Central Mortgage and Housing Corporation
Crown Assets Disposal Corporation
Defence Construction (1951) Limited
Eldorado Mining and Refining Limited

Export Credits Insurance Corporation
Federal District Commission
Halifax Relief Commission
Industrial Development Bank
International Pacific Salmon Fisheries Commission
International Pacific Halibut Commission
National Harbours Board
Northern Transportation Company Limited
Northern Canada Power Commission
Polymer Corporation Limited
Prince Edward Island Car Ferry
St. Lawrence Seaway Authority
The Office of the Custodian
Trans-Canada Air Lines

The figures pertaining to this group are published in aggregate only in order to preclude the possibility of disclosure concerning the operations of any particular agency.

1.—Employees in Governmental Services of the Federal Government by Month, Years Ended Mar. 31, 1955 and 1956

NOTE.—Includes departments, boards, commissions, etc. listed in Table 3 but excludes certain Federal Government agencies, proprietary corporations, etc., figures for which are given in Table 4. Figures for 1952-53 are given at p. 113 of the 1955 Year Book and for 1953-54 at p. 128 of the 1956 Year Book.

Sweden.....1943	Ambassador.....	720 Manor Road, Rockcliffe Park, Ont.
Switzerland.....1946	Ambassador.....	5 Marlborough Avenue, Ottawa
Turkey.....1944	Ambassador.....	197 Wurttemberg Street, Ottawa
Union of South Africa.....1938	High Commissioner.....	9 Rideau Gate, Ottawa
Union of Soviet Socialist Republics.....1942	Ambassador.....	285 Charlotte Street, Ottawa
United Kingdom.....1928	High Commissioner.....	Earncliffe, Ottawa
United States of America.....1927	Ambassador.....	100 Wellington Street, Ottawa
Uruguay.....1948	Chargé d'Affaires <i>ad interim</i>	The Roxborough, Ottawa
Venezuela.....1953	Ambassador.....	The Roxborough, Ottawa
Yugoslavia.....1942	Ambassador.....	17 Blackburn Avenue, Ottawa

Section 2.—International Activities*

Subsection 1.—Canada and Commonwealth Relations 1955-57

Close and friendly consultation, long the symbol of Commonwealth association, continued during the period under review, June 1, 1955 to Apr. 30, 1957. Though 1956 was in certain respects a critical year, the differences of policy revealed over the Suez issue between the United Kingdom and certain of its Commonwealth colleagues were followed by a very real desire to remove the causes of these differences. Canada and the United Kingdom worked closely together throughout the year and, in unspectacular but vital day-to-day relations, continued that frank and friendly consultation which is the life blood of the Commonwealth connection. Not only at the Prime Ministers' Meeting, but in the United Nations, in Colombo Plan matters, at NATO conferences, and in such official

* Prepared by the Department of External Affairs.

bodies as the United Kingdom-Canada Continuing Committee on Trade and Economic Affairs, the ties existing between Canada and the senior member of the Commonwealth were daily strengthened and maintained.

In June and July 1956, a Meeting of Commonwealth Prime Ministers was held in London under the chairmanship of Sir Anthony Eden. Sir Anthony, Mr. Strijdom of South Africa, Mr. Mohamad Ali of Pakistan, and Mr. Bandaranaike of Ceylon, attended as Prime Ministers for the first time. Noting the growing recognition of the devastating power of thermo-nuclear weapons, the Prime Ministers agreed that the peaceful use of nuclear energy constitutes a valuable new sphere for co-operation within the Commonwealth as well as with other countries. The Prime Ministers went on to review significant developments in the Soviet Union and relate them to the context of international relations and world affairs. In acknowledging Ceylon's statement of intent to become a republic, the Prime Ministers accepted and recognized its continuing membership in the Commonwealth.

In November and December 1956, the Hon. Paul Martin, then Minister of National Health and Welfare, carried out a goodwill tour of Asia *en route* to and from the meetings of the Colombo Plan Consultative Committee in Wellington, New Zealand, at which he was Chairman of the Canadian Delegation. The tour included Australia and Asiatic countries including India, Pakistan and Ceylon where he inspected Canadian Colombo Plan projects.

During 1956, Ottawa welcomed many prominent Commonwealth statesmen including the Prime Minister, the Foreign Secretary and the Secretary of State for Commonwealth Relations of the United Kingdom; the Prime Minister, the Minister for External Affairs and the Minister of Trade of Australia; the Prime Minister of New Zealand; the Prime Minister of Ceylon; the Prime Minister of India; the Premier and the Minister of Education of Western Nigeria; the Minister of Labour of Jamaica; and the Premier of the Australian State of Victoria. In addition, the Deputy Prime Minister and the Minister of Finance of the Federation of Rhodesia and Nyasaland, and the Minister of National Resources of India came to Ottawa to discuss problems of common interest with Canadian Government leaders and officials.

Severe flooding occurred in several sections of India and Pakistan in July and August 1956. In August the Canadian Government authorized a gift to Pakistan of 25,000 tons of Canadian No. 4 wheat valued at \$1,500,000, a gift separate and distinct from Colombo Plan contributions. The Canadian Red Cross gave India flood relief supplies valued at \$25,000. Emergency assistance in the form of \$50,000 worth of wheat flour was sent to relieve hurricane victims in the British West Indies. In addition, \$50,000 worth of relief supplies was provided by the West Indies Hurricane Relief Fund, sponsored jointly by the Canadian Exporters Association and the Canadian Red Cross.

At the Eleventh Session of the United Nations General Assembly the Delegation of the Union of South Africa announced that, in view of the Assembly's continuing insistence on discussing matters which were within the internal jurisdiction of the Government of South Africa, the South African Permanent Representative to the United Nations would be withdrawn and that South Africa would, in future, maintain only token representation at the United Nations.

On Mar. 23, 1956, the Republic of Pakistan was proclaimed. This had been forecast at the Prime Ministers' Meeting of January 1955 at which the Prime Ministers had accepted and recognized Pakistan's continuing membership in the Commonwealth after it became a republic. Canada sent its Ambassador to Tokyo, Mr. T. C. Davis, as special envoy to the inauguration ceremonies in Karachi.

The period was marked by a series of steps leading to the eventual granting of independence to certain United Kingdom dependent territories. On Feb. 8, negotiations between the United Kingdom and representatives of Malaya were successfully concluded with the signing of an agreement to cover the transfer of full sovereignty to the Government of the

Federation, with Aug. 31, 1957, set as the date for full independence "if possible". Negotiations conducted at London in March 1957 resulted in agreement on complete internal autonomy for the State of Singapore, with the United Kingdom remaining responsible for its foreign relations and defence.

A bill granting independence to Ghana was passed by the United Kingdom Parliament in February 1957. The granting of independence on Mar. 6, 1957, was marked by extensive celebrations in Accra, at which Canada was represented by the Hon. George Prudham, then Minister of Mines and Technical Surveys. On the same day Canada's then Prime Minister, in a statement in the House of Commons, welcomed Ghana's entry into the Commonwealth as a fully independent nation and announced that Canada would open a diplomatic mission in Accra and appoint a Canadian High Commissioner as soon as it was possible to do so. Ghana became a member of the United Nations on Mar. 8, its application for membership being sponsored by Australia, Canada, Ceylon, India, New Zealand, Pakistan and the United Kingdom.

Delegations from Jamaica, the Leeward Islands, Barbados, the Windward Islands and Trinidad, and observers from British Guiana and British Honduras discussed a proposed Caribbean Federation with the United Kingdom Government at London in February 1956. On Aug. 2 the Queen gave assent to enabling legislation for the establishment of the Federation. Lord Hailes has been appointed the first Governor General and Commander-in-Chief of the West Indies.

The United Kingdom Government reaffirmed its intention to grant internal self-government to any region in Nigeria which desired it. In March 1957 the Legislative Assembly of the Federation of Nigeria passed a unanimous resolution requesting the Federation's independence within the Commonwealth in 1959. A constitutional conference was slated to be held in London at the end of May 1957.

During the review period, changes of government took place in a number of Commonwealth countries. At elections held in April 1956 in Ceylon a coalition of parties headed by Mr. S. W. R. D. Bandaranaike defeated Sir John Kotelawala's United National party. In September, following political disputes between the two wings of the country, Mr. Mohamad Ali resigned as Prime Minister of Pakistan and was succeeded by Mr. H. S. Suhrawardy. The Prime Minister of the United Kingdom, Sir Anthony Eden, resigned because of ill health in January 1957 and was succeeded by Mr. Harold Macmillan. In India a general election, the second since Independence, was held in March and April 1957. Since the first general election the number of States had been reduced and the borders of the new ones redrawn on linguistic lines. The Congress Party secured another impressive victory at the polls, increasing its share of the popular vote from 45 p.c. to 48 p.c., although it gained only one additional seat in the Lok Sabha (House of the People).

The Prime Ministers of the United Kingdom and Canada met in Bermuda on Mar. 25 and 26, 1957, immediately following a meeting between Prime Minister Macmillan of the United Kingdom and President Eisenhower of the United States. Discussions were held on topics of concern to both countries, including the Middle East situation, relations between the United Kingdom and Europe and Canadian-United Kingdom trade.

It was announced on Apr. 17, 1957, that a meeting of the Commonwealth Prime Ministers would be held at London on June 26, 1957.

Subsection 2.—Canada and the United Nations

The period June 1, 1955, to Apr. 30, 1957, was perhaps the most difficult experienced by the United Nations in the eleven years of its existence. There was no war but there was no tranquillity in the world and, since the United Nations is a reflection of the world as it exists, these strains and quarrels were mirrored in the United Nations. Nevertheless, the United Nations continued to make progress on many fronts in its efforts to safeguard peace and advance the economic and social welfare of all peoples through international co-operation. Canada has continued to play an active role in United Nations affairs.

During this period, Canada continued to be represented in the Middle East on the United Nations Truce Supervision Organization (UNTSO). Major-General E. L. M. Burns of Canada served as Chief of Staff for UNTSO from August 1954 until November 1956 when the United Nations Emergency Force (UNEF) was established and Major-General Burns became its Commander. Canada continued to provide observers also for service in Kashmir with the United Nations Military Observer Group (UNMOG). By the end of the period under review the Canadian Government had also provided more than 1,000 Army and RCAF personnel for service with UNEF, the total strength of which was about 6,000 men representing contingents from ten countries—Brazil, Canada, Colombia, Denmark, Finland, India, Indonesia, Norway, Sweden and Yugoslavia. Continuation of the armistice in Korea permitted the withdrawal of Canadian military forces and by Apr. 30, 1957, only a small Canadian medical detachment numbering thirty officers and men remained in this former theatre of hostilities.

Developments in important United Nations bodies during the review period are summarized below.

General Assembly.—The tenth session of the General Assembly was held in New York from Sept. 20 to Dec. 20, 1955, under the presidency of Sr. José Maza of Chile. The then Minister of National Health and Welfare, Hon. Paul Martin, was Chairman of the Canadian Delegation. The General Assembly held its first emergency special session from Nov. 1 to 10, 1956, and its second emergency special session from Nov. 4 to 10, 1956. The Canadian Representatives at these two emergency sessions were the Hon. L. B. Pearson, then Secretary of State for External Affairs and Dr. R. A. Mackay, Permanent Representative of Canada to the United Nations. The eleventh session of the General Assembly was held from Nov. 12, 1956, to Mar. 8, 1957; the Hon. L. B. Pearson was Chairman of the Canadian Delegation which attended this session.

The most notable developments during the tenth session were concerned with the admission of sixteen new members to the United Nations, and with disarmament and atomic energy. After a deadlock of nearly ten years, broken only occasionally by the admission of a very few mutually acceptable candidates, the General Assembly finally enlarged its membership from sixty to seventy-six nations and became, as it was originally intended to be, very largely representative of the entire world. The Canadian Delegation contributed substantially to this result by taking the initiative in attempting to break the deadlock over United Nations membership. The developments on disarmament were disappointingly inconclusive at the tenth session after the hopes raised the year before. After the failure of the Conference of Foreign Ministers in November 1955, the General Assembly passed a resolution on disarmament by a large majority, but there was no great enthusiasm and little sense of achievement since the short-lived unanimity of the ninth session could not be recaptured. However, a significant contribution to the tenth session was the unanimous approval of the resolutions on peaceful uses of atomic energy and on the effects of atomic radiation. On another issue, the Arab-Israeli dispute, there was no compromise during the tenth session and there was a prolonged and bitter exchange of accusation encompassing every aspect of the Palestine impasse. The representation of China at the United Nations remained unchanged after the tenth and eleventh sessions of the General Assembly. While there was majority support for the contention that no change in that representation should take place and that a representative of the Nationalist Government of China should continue to hold the seat, resolutions were introduced and pressure increased at the General Assembly in support of the view that a representative of the People's Republic of China should speak for China.

The two emergency sessions and the regular eleventh session of the General Assembly held between Nov. 1, 1956 and Mar. 8, 1957, provided the Canadian Delegation with grounds for satisfaction as well as for apprehension. Five new members were admitted—Ghana, Japan, Morocco, Sudan and Tunisia—bringing the membership of the United Nations to eighty-one countries. The most crucial issues considered were those of Hungary and the Middle East. The difficulties in the Middle East following the seizure of the Suez

Canal in the summer of 1956 and the Soviet armed intervention in Hungary confronted the United Nations with its most serious crises since the Korean War. The General Assembly took action, particularly by establishing the United Nations Emergency Force, to secure the ceasefire in the Middle East and the withdrawal of Israeli, French and United Kingdom troops. The Hungarian uprising began on Oct. 23, 1956. The General Assembly called on the Soviet Union to withdraw its forces from Hungary, but this request met with no success since neither the Soviet Union nor the Kadar Government in Hungary was willing to comply with the resolutions of the United Nations. Neither was the Secretary-General of the United Nations nor his observers allowed to enter Hungary to investigate the circumstances of the uprising. No concrete results had developed from the disarmament negotiations by April 1957.

Security Council.—Canada was not a member of the Security Council during this period. The source of chief concern to the Council continued to be the threat of hostilities between Israel and its Middle Eastern neighbours. Increasingly grave crises were occurring between Israel and three of its four Arab neighbours. Israel was unanimously condemned by the Security Council on Jan. 19, 1956, for what was called a flagrant violation of the 1948 ceasefire when it replied to a Syrian shooting incident on Lake Tiberias by mounting a large-scale military raid against Syrian positions. The Secretary-General of the United Nations visited the region on a number of occasions and endeavoured to arrange measures which would reduce the existing tensions. Then on Apr. 5, 1956, Gaza was shelled by the Israelis and hostilities were halted only by the intervention of the United Nations Truce Supervision Organization. However, reprisals continued for some weeks by Egyptian-trained fedayeen against Israel because of the shelling of Gaza. In September and October 1956 there was again a sharp increase in violence on the Jordan-Israel border. In mid-October Jordan appealed to the Security Council, and the Council was considering this appeal when, on Oct. 29, Israeli forces invaded Egypt. Earlier, on Sept. 26, 1956, the Security Council began to study the Suez Canal question and by mid-October had achieved unanimous agreement on six principles which should govern the settlement of the Suez Canal dispute. Immediately after Israel launched its attack against Egypt on Oct. 29, followed on Oct. 30 by the twelve-hour notice from the Governments of the United Kingdom and France that their forces would intervene, the Security Council met and called for the withdrawal of Israel's forces behind the armistice line and requested other countries to give no assistance to Israel. This Security Council proposal was vetoed by France and the United Kingdom. Because of this lack of unanimity among the Council's permanent members, there was invoked for the first time the General Assembly's 1950 "Uniting for Peace" resolution and the problem of the Middle East hostilities was referred to the General Assembly.

Among other matters of importance considered by the Security Council during the period under review were the admission of new members to the United Nations, the Kashmir dispute submitted by Pakistan against India, and the proposal to call a general conference of United Nations' members for the purpose of reviewing the Charter.

Economic and Social Council (ECOSOC).—Canada began serving its third three-year term of office on the Economic and Social Council on Jan. 1, 1956. Canada's previous years of service were from 1946-48 and again from 1950-52. In the period reviewed by this article the Council held its twentieth, twenty-first, twenty-second and twenty-third sessions. As of the end of April 1957 Canada was a member of four of ECOSOC's eight functional commissions—Population, Statistical, Narcotic Drugs and International Commodity Trade.

Ever since the United Nations was established, its ten Specialized Agencies have been the chief instruments through which member states have pooled their efforts in trying to achieve the goals of higher standards of living, full employment and conditions of economic and social progress. Canada is a member of all the United Nations Specialized

Agencies and has tried to encourage and develop their programs.* The responsibilities which the Specialized Agencies have assumed are so vast, and the opportunities for useful work so numerous, that great difficulty has been experienced in setting limits to and priorities for their programs. Canada has endeavoured to have the programs of the Specialized Agencies planned according to a system of priorities and has encouraged the Agencies to demonstrate techniques, give guidance and generally stimulate national efforts rather than engage themselves in direct operations. In July 1956 the International Finance Corporation (IFC) came into being as an affiliate of one of the Specialized Agencies (the International Bank for Reconstruction and Development). Canada had become a member of the IFC in October 1955 and at that time had purchased shares to the value of \$3,600,000. The actual establishment of IFC in July 1956 was the result of thirty countries subscribing the necessary funds in order to promote investment of capital in private enterprise in under-developed countries.

ECOSOC gave further consideration to the possibility of establishing a Special United Nations Fund for Economic Development (SUNFED) which would provide grants and long-term low interest loans to help the governments of under-developed countries strengthen their economies.

The United Nations and its Specialized Agencies have undertaken for many years special programs of assistance to overcome certain acute problems and serious deficiencies which exist in various areas. Since money for these special programs is not available through the regular United Nations budget or through the regular budgets of the Specialized Agencies (these regular budgets are raised by assessing all member States using a scale of assessment which is based mainly on the yardstick of gross national product), it must be raised from voluntary contributions made by member States. At the present time the United Nations is sponsoring five special programs: the United Nations Expanded Programme of Technical Assistance (ETAP); the United Nations Children's Fund (UNICEF); the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA); the United Nations Refugee Fund (UNREF); and Aid for Korea (UNKRA)—which is expected to be wound up by 1958. Canada has made substantial contributions to these five programs and pledged to contribute, in 1956, \$650,000 to UNICEF, \$500,000 to UNRWA, \$125,000 to UNREF and \$1,800,000 to ETAP. For 1957, Canada pledged to contribute \$650,000 to UNICEF, \$750,000 to UNRWA, \$200,000 to UNREF and \$2,000,000 to ETAP.

In addition to these voluntary contributions, Canada paid an annual assessment to the United Nations as well as an assessment to each of the ten Specialized Agencies totalling about \$1,400,000 for 1956. Canada's share of the United Nations normal administrative budget for 1956 was at the rate of 3.63 p.c., or \$1,600,000.

Trusteeship Council.—During the period under review, the Trusteeship Council held five sessions—its regular sixteenth, seventeenth and eighteenth sessions as well as a special session at the end of 1955 and another special session in December 1956. Canada has not yet been elected to membership on the Trusteeship Council. As of the end of April 1957, the membership of the Trusteeship Council consisted of the seven States which administer trust territories (Australia, Belgium, France, Italy, New Zealand, United Kingdom, United States) and an equal number of non-administering States; always included in the latter group are the two permanent members of the Security Council, the U.S.S.R. and China, which do not administer trust territories. At the end of April 1957 the other five non-administering countries on the Trusteeship Council were Burma, Guatemala, Haiti, India and Syria.

During the period under review, the most outstanding development was the ending of the trusteeship of United Kingdom-administered Togoland. This territory voted on May 9, 1956, to enter into a union with the Gold Coast which became the independent state of Ghana on Mar. 6, 1957. The trust territory of Eastern Togoland under French

*Canada's activities in connection with three of these Specialized Agencies—United Nations Educational, Scientific and Cultural Organization, Food and Agricultural Organization and International Labour Organization are dealt with elsewhere in this volume. See Index.

administration made satisfactory political advances during the period, and a six-nation commission, to which Canada will provide a member, will visit the territory in the summer of 1957 to examine the practical operation of its new constitution and of the institutions established under it. In the review period, United Nations missions visited trust territories in the Pacific which are administered by Australia, New Zealand and the United States. Canadian policy on trusteeship matters before the General Assembly is governed by a careful weighing, within the provisions of the United Nations Charter, of the responsibilities, rights and aspirations of both the administering states and the indigenous populations.

International Court of Justice.—To “adjust and settle international disputes in conformity with Justice and International Law” is one of the purposes of the United Nations and it was therefore essential to establish a judicial arm for the Organization. The Statute of the International Court of Justice is an integral part of the Charter of the United Nations. All members of the United Nations are *ipso facto* parties to the Statute of the Court. A state which is not a member of the United Nations may, nevertheless, become a party to the Statute of the Court on conditions to be determined in each case by the General Assembly upon the recommendation of the Security Council. Thus, at the moment, the total number of parties to the Statute is 85—81 members of the United Nations and 4 non-members (Liechtenstein, San Marino, Switzerland and the Federal Republic of Germany). The Court is composed of 15 judges who are elected in individual capacities. Judge John E. Read of Canada was elected to the Court in 1946 and again in 1949. His present term of office expires in 1958.

Subsection 3.—Canada and the North Atlantic Treaty

Within less than two years of the end of World War II in 1945 and the establishment of the United Nations hopes of a lasting peace gave place to growing anxiety. The United Nations Security Council, which had been given responsibility for maintaining world-wide security, was deliberately prevented by the U.S.S.R. representatives from fulfilling this function. The Soviet Union maintained its armed forces after the War at a level that insured to itself a preponderance of military strength in Europe. The Soviet Government blocked attempts by the Western Powers to reach a peace settlement in Europe and communist parties were used as an instrument of Soviet policy to sabotage Western European efforts at economic recovery and political co-operation. Under these circumstances, the countries of the Atlantic community felt themselves in grave peril of Soviet aggression and communist subversion and therefore took special collective measures under the United Nations Charter to maintain peace.

The first step in this direction was taken in the spring of 1948 when Belgium, France, Luxembourg, the Netherlands and the United Kingdom signed the Brussels Treaty establishing Western Union. On Apr. 4, 1949, as a result of negotiations between these countries and Canada and the United States, the North Atlantic Treaty was signed at Washington, D.C. This Treaty was accepted by all major groups of opinion in Canada and was passed without a single dissenting vote in Parliament.

The original signatories of the Treaty were Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom and the United States. In September 1951 it was agreed that Greece and Turkey should be invited to accede to the Treaty and they were admitted in February 1952. In October 1954 a protocol to the North Atlantic Treaty inviting the Federal Republic of Germany to join NATO was approved together with related arrangements which provided for the establishment of a Western European Union (composed of the Brussels Powers, the Federal Republic of Germany and Italy) and for the restoration of full sovereignty to the Federal Republic of Germany. These measures, designed to bring the Federal Republic of Germany into close and enduring association with the Atlantic Community of free nations, were adopted following the failure of the European Defence Community Treaty which was

rejected by the French Assembly in August 1954. On May 6, 1955, the Federal Republic of Germany deposited in Washington its instrument of accession to the North Atlantic Treaty and thus joined NATO as its fifteenth member.

The terms of the Treaty and the organization of the Council and subordinate committees are dealt with in the 1954 Year Book at pp. 113-115.

Developments during 1955-57.*—The North Atlantic Council continued in permanent session at Paris, France, under the chairmanship of the Secretary-General Lord Ismay. Mr. L. D. Wilgress remained the Permanent Representative of Canada to the Council. In addition to the regular meetings of the Permanent Representatives, the Council met in Ministerial Session at Paris in December 1955, in May 1956 and again in December of that year.

These Ministerial meetings afforded the Foreign and Defence Ministers of the NATO countries a useful opportunity to exchange views on the current political developments affecting the Alliance, and to review the progress made in maintaining and developing an effective military organization to assure the security of its members. The year 1956 was of particular importance since it witnessed the beginning of a reappraisal of NATO military planning, designed to take into account NATO's most recent estimates of Soviet intentions and capabilities, and the various types of new weapons available for NATO defence. Of particular interest was the approval of a political directive regarding future military planning, which reaffirmed *inter alia* that NATO, as a defensive alliance, should have sufficient land forces in Europe to act as a shield against any sudden aggression, adequate air and naval forces to retaliate against the aggressor, nuclear weapons for use in the event of overt Soviet military aggression, and the ability to deal locally with situations short of all-out war such as infiltrations, incursions and limited hostile actions. Consideration was also given to the increasing cost of defence and to the problems involved in trying to maintain large conventional forces to deal with limited attacks, in addition to forces equipped with atomic and nuclear weapons.

In their survey of the military capabilities of the Alliance and their assessment of the progress achieved during 1956, member governments found the situation generally encouraging, and noted with particular approval the efforts made by the NATO military authorities to provide NATO forces with new modern weapons.

NATO's activities during the period under review were also marked by the efforts of member governments to improve and extend NATO co-operation in non-military fields, and to develop greater unity within the Atlantic community. The North Atlantic Council appointed at its meeting in May 1956 a Committee of Three Ministers, consisting of Dr. Martino, the Foreign Minister of Italy, Mr. Halvard Lange, Foreign Minister of Norway and the Hon. L. B. Pearson, then Secretary of State for External Affairs for Canada, to advise the Council on ways and means to achieve these objectives. With the aid of questionnaires, supplemented by consultations at the ministerial level with representatives of the other NATO governments, the Committee of Three submitted a report which was approved in principle by the Ministers at the meeting of December 1956 and all recommendations accepted. The report was an important landmark in the development of NATO activities in the non-military field. It stressed the need of members of the Alliance in present circumstances to develop common policies by full and timely consultation on issues of common concern. The appointment of Mr. Paul-Henri Spaak as Secretary-General of the Organization, in succession to Lord Ismay, gave added significance to the approval accorded the recommendations of the Committee of Three for wider authority and powers for the Secretary-General. This office has now become a political as well as an administrative one.

Thus the period under review has been extremely active for the NATO Alliance and the Organization, despite differences which any group of fifteen sovereign countries is bound to experience from time to time, still displays much resiliency, and continues to be as necessary, in the face of Soviet policy and actions in Europe and elsewhere, as it was at the time of its establishment in 1949.

* June 1, 1955 to Apr. 30, 1957.

Canadian Contributions to NATO.—Canada continued in 1956-57 to support NATO with contributions of Armed Forces to the unified NATO commands, with material assistance to other NATO countries and with financial contributions to common budgets. The 2nd Canadian Infantry Brigade, which in late 1955 replaced the 1st Infantry Brigade in the Soest area of Germany, carried out extensive training exercises independently and also in conjunction with other NATO forces in the Northern Army group in Northwest Europe. The Canadian contribution of an air division of 12 jet fighter squadrons to SACEUR remained unchanged. The Royal Canadian Navy had 40 ships assigned to duties connected with the defence of the Canada-United States area and for the protection of any convoys under the control of SACLANT.

Between Apr. 1, 1950 and Mar. 31, 1957, arrangements under the Canadian Mutual Aid Program provided for the transfer by Canada to the non-North American members of NATO of military aid estimated to value \$1,418,400,000.

The main elements of the program include: (a) training in Canada of aircrew for other NATO countries—under the NATO aircrew training program some 4,500 pilots and navigators from ten NATO nations have successfully completed training at RCAF establishments; (b) transfers of equipment from service stocks or from current production for the Services; (c) direct transfers of equipment from current production; and (d) contributions towards infrastructure programs and NATO budgets. Canada's estimated share of the cost of the NATO common infrastructure program for the year ended Mar. 31, 1958, was \$17,000,000. Total Canadian expenditure for NATO Headquarters budgets for the same year is estimated at \$1,300,000.

Subsection 4.—Canada and the Colombo Plan

The Colombo Plan for Co-operative Economic Development in South and South-East Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, Jan. 9-14, 1950. Although the Colombo Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth program. It is designed to assist in the economic development of all countries and territories in the general area of South and South-East Asia. Its membership now includes Australia, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Japan, Laos, Nepal, New Zealand, Pakistan, the Philippines, Thailand, Malaya (Malaya and Singapore), the United Kingdom, British Borneo (North Borneo, Brunei and Sarawak) and Vietnam, as well as the United States which is also engaged in a substantial program of economic aid in the same region.

Supervision of the Colombo Plan is in the hands of a Consultative Committee of Foreign Ministers of the member countries, who meet once a year to review projects, exchange views on policy matters and prepare an annual report. It is, as its name implies, a "consultative" body; no collective policy decisions binding member countries are taken by its meetings. To develop the technical assistance side of the Plan, a Council for Technical Co-operation, on which Canada is represented, meets regularly in Colombo. The Technical Co-operation Programme, though an integral part of the Colombo Plan, is designed to supplement the technical assistance activities of the United Nations and the Specialized Agencies in the area.

From the beginning of the Plan in 1950 through April 1958 Canada will have made available a total of \$196,800,000 for capital and technical assistance projects in South and South-East Asia.

While eight separate countries are now receiving capital assistance from Canada, the largest contributions have so far been made in India, Pakistan and Ceylon. The Canadian contribution has consisted primarily of direct assistance to various development projects (equipment for multi-purpose irrigation and hydro-electric projects, the Canada-India NRX atomic reactor, transportation equipment, fishing boats and surveys of resources). It has also included goods which the recipient governments have been able to use as a

means of raising some of the money needed to meet local costs of development programs (wheat, flour, copper, aluminum and railway equipment). Canadian aid has been helping these countries in both ways, to develop their economies and raise their standards of living.

Under the Technical Assistance Programme up to Mar. 31, 1957, about 650 persons from many countries in the area had been received for training in Canada in a great variety of technical fields and almost 100 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, refrigeration, marine biology, agriculture, soil erosion, vocational training, accountancy and the maintenance of tractors and agricultural machinery. Additional Canadian experts have been employed on aerial resources survey teams and in the installation and operation of capital equipment. Equipment for technical training in various fields has also been supplied.

The Consultative Committee of the Colombo Plan held annual meetings at Singapore in October 1955, and at Wellington, New Zealand, in December 1956. At the Singapore meeting it was agreed that the Colombo Plan should be extended from July 1957 to June 1961, and that the future of the Plan should be considered by the Consultative Committee at the 1957 meeting. Reports of the Committee* on progress and future plans are published after each annual meeting; each report also contains sections describing the activities of member countries.

* Obtainable from the Queen's Printer, Ottawa.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter presents only a limited summary of the voluminous data on population recorded by the Censuses of Canada. More detailed information and extended analyses are published in the Census volumes and reports which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics, Ottawa. A list of such publications and their prices is available on request.

Section 1.—History of the Census

A brief account of the early censuses of Canada is given under this heading in the 1956 Year Book at pp. 146-149. More detailed information on the history of census-taking in Canada may be found in Volume XI (Administrative Report) of the 1951 Census of Canada, in the Administrative Report of the 1941 Census of Canada, and in Volume I of the 1931 Census of Canada.

Section 2.—The Censuses of 1951 and 1956

The ninth Decennial Census of Canada taken in 1951 was one of the most significant in the country's history. Coming at the mid-point of the century, it provided a means of measuring Canada's development during the first half of the century. Following a decade of great international upheavals—World War II and the immediate postwar adjustment period—it reflected the widespread economic and social changes occurring during that period. Also, with the admission of Newfoundland into Confederation in 1949, it represented Canada's first census as a nation of ten provinces.

* Revised in the Census (Demography) Division, Dominion Bureau of Statistics.

The modern census has become a highly complex administrative and technical operation. Each enumeration has shown considerable advance over its predecessor in planning, organization, enumeration and processing as well as in coverage. The 1951 Census marked the introduction of many new techniques—a number of processing operations were decentralized and were performed for the first time in regional offices located across Canada; mark-sense equipment was used in conjunction with high-speed electronic tabulating machines; and specialized printing processes were employed to speed the release of published reports and volumes. The results of that Census and descriptions of census methods are contained in the printed record* which will form an important source of reference for many years to come.

Commencing around the turn of the century when the western part of Canada was in its early and rapid stages of development, there were censuses of the three Prairie Provinces of Manitoba, Saskatchewan and Alberta at each mid-decade period up to and including 1946. The decision to replace these censuses by a nation-wide census of modified design in 1956 was influenced by the extremely large increases and shifts in the population of Canada shown by intercensal estimates since 1951, and by extensive changes occurring in the agricultural economy of the country. For example, Canada's population increased by over 2,000,000 in the 1951-56 period, a gain almost comparable with that for the complete ten-year period between the decennial censuses of 1941 and 1951. Agricultural changes were characterized by the continuance of the postwar trend toward farm mechanization resulting in fewer and larger farms, often through amalgamation of existing farms, and causing notable changes in types of farming operations and in farm employment.

Such rapidly changing conditions in population and agriculture indicated the need for benchmarks at the five-year period in order to provide accurate estimates over the longer interval of ten years. Also, it was essential to have more up-to-date information on the distribution of the expanded population across the country since 1951 for the many uses required by agencies of government, business, social research, etc. One of the chief values of the 1956 Census is that it provides basic information on population and agriculture for small areas at a point midway between the decennial censuses, information which cannot be obtained from intercensal estimates.

It was realized that if a complete census of Canada were to be undertaken in 1956 it must, of necessity, be of simplified design and limited to basic essentials. Questionnaires were restricted to five 'statistical' inquiries on population (sex, age, marital status, relationship to head of household, and farm or non-farm residence) as compared with 26 in 1951; there were 76 questions on agriculture (farm areas, crop acreages, livestock, farm machinery and farm labour) as compared with approximately 200 in 1951. Such phases of the full-scale 1951 Census operations as the sample Housing Census, the Census of Distribution (retail, wholesale and service establishments), and the Census of the Fisheries were not included in the 1956 program. Also beyond the scope of the modified 1956 Census were population inquiries on birthplace, schooling, origins, religions and languages, as well as economic characteristics dealing with the occupations and industries of persons in the labour force. For such data, the 1951 Census represents the most recent census information available.

Section 3.—Growth of the Population

The population history of Canada, from the first census in 1666 when 3,215 persons were enumerated to the 1956 Census when the figure was 16,080,791, reveals an outstanding rate of population growth. Each census period, of course, contributed to this growth but the periods 1901-11, 1911-21, 1941-51, and 1951-56, merit particular mention. In the decade 1901-11, Canada's population increased by 34.2 p.c., the highest rate of growth in the nation's history. Immigration was the main factor in this gain, 1,800,000

* *Ninth Census of Canada 1951*, Vols. I-XI, \$25, Queen's Printer or Dominion Bureau of Statistics, Ottawa.

persons having entered the country during the period. Despite World War I with its accompanying population losses through casualties, emigration and the influenza epidemic, Canada's population increased by 21.9 p.c. in the 1911-21 decade.

The period 1941-51 recorded the largest numerical gain on record for a ten-year period, 2,502,774 persons being added to the 1941 population during the decade. Newfoundland's entry into Confederation in 1949 accounted for 361,416 of this increase. Immigration, although greatly restricted during the war years, was resumed during the last part of the decade and brought about a net gain of approximately 424,000 in population through immigrant arrivals. This period was also characterized by high birth rates, and the natural increase was just under 2,000,000 for the ten-year period.

The Census of 1956 showed the population of Canada to be 16,080,791, an increase of 2,071,362 or 14.8 p.c. over the 1951 figure of 14,009,429. This numerical increase was exceeded only in the 1941-51 period, and is all the more remarkable since it occurred in only five years. Immigration and a continuation of the high birth rates of the previous decade were characteristic also of the 1951-56 period.

1.—Numerical and Percentage Distribution of Population by Province, Decennial Census Years 1901-51 and 1956

NOTE.—Populations for the decennial Census years 1871, 1881 and 1891 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131.

¹ Populations of Newfoundland (not part of Canada until 1949) were: 1901, 220,984; 1911, 242,619; 1921, 263,033; 1931, 281,500 (estimated); 1941, 303,300 (estimated); and 1945, 321,819.

² Includes 485 members of the Royal Canadian Navy recorded separately in 1921.

Section 4.—Intercensal Estimates and Movement of Population

Intercensal estimates of the population have many uses. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. More recently they have proved useful for estimates of labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed for the total population of Canada and for each province and become available about the date to which they apply, June 1 of each year. The estimates of population begin with the preceding census counts, to which are added the births of the intervening census year or years and from which the deaths are subtracted; immigrants are added and emigrants subtracted. The next succeeding census serves as a check on the accuracy of the annual estimates. On emigration no precise information is available. The Bureau receives yearly from the United States the number of persons who gave Canada as country of last permanent residence before entering the United States as immigrants; and from the United Kingdom's Board of Trade the number of emigrants from Canada taking up permanent residence in the United Kingdom. These data, however, are not available from other countries.

Since estimates for successive years are independently calculated from the latest census, the best estimate of the balance of population change is not obtained by subtracting the figure for one year from that for the year following. Much interest attaches to the year-to-year balance and the following statement is presented, which gives all available data on that point.

Year	Calendar Year Data ¹				Estimated Population as at June 1 ¹
	Births	Deaths	Natural Increase	Immi- gration	
1941.....	255,317	114,639	140,678	9,329	11,490,000

2.—Estimates of Population by Province, Intercensal Years 1941-57

NOTE.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for all provinces for 1941, 1951 and 1956 and for the Prairie Provinces for 1946 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141; for 1905-30 in the 1946 edition, p. 127; and for 1931-40 in the 1952-53 edition, p. 143.

Table 3 shows the natural increase and the total population increase according to the Census for Canada and the provinces in the periods 1931-41, 1941-51 and 1951-56. The difference between the natural increase and the total increase in population during a period represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

The traditional movement of population on the North American Continent from east to west has not been apparent in Canadian statistics in recent years. The most spectacular changes are shown in the Prairie Provinces and in British Columbia. While the three Prairie Provinces lost by migration about 250,000 persons between 1931 and 1941 and somewhat more from 1941 to 1951, they gained in the period 1951-56. Manitoba lost over 100,000 population between 1931 and 1951 but only 152 persons between 1951 and 1956. Saskatchewan has been a consistent loser since 1931, losing over 15,000 annually during the 1930's, almost 20,000 annually during the 1940's and just under 8,000 annually during the 1950's. Alberta lost over 40,000 persons in the decade 1931-41 but only about 7,000 in the next decade and gained over 60,000 in the five years 1951-56. British Columbia gained at the rate of about 8,000 persons a year during the 1930's, about 23,000 a year

during the 1940's and about 27,000 a year in the first half of the 1950's. On an absolute basis Ontario received more people than did British Columbia but, in relation to its larger population, this growth was only about one-third as important. Quebec had a slight loss between 1931 and 1951 and a considerable gain in the next five years. Nova Scotia gained population during the 1930's but has been losing ever since; the Maritimes as a whole lost 138,000 persons over the quarter-century.

3.—Numerical Changes in the Population of the Provinces through Migration 1931-41, 1941-51, and 1951-56

² Calculated on the basis of 1,948,131 sq. miles which excludes the land area of Newfoundland.

³ Includes Newfoundland.

⁴ Calculated on the basis of 3,406,915 sq. miles which excludes the land area of Newfoundland.

Section 6.—Rural and Urban Population

Before 1951 the population residing within the boundaries of all incorporated cities, towns and villages of a province was classified by the census as urban and the remainder as rural. Since the laws governing incorporation vary among provinces, there was no uniform line of demarcation between the rural and urban population throughout Canada. In the 1951 Census the aggregate number of residents within a given area, rather than provincial legal status, was the main criterion for the rural-urban classification. The population residing in cities, towns and villages of 1,000 or over, whether incorporated or unincorporated, as well as the population of all parts of census metropolitan areas, was defined as urban and that outside such localities as rural. The 1956 Census definition was substantially the same as that used in the Census of 1951 except that the fringe parts of other major urban areas were classed as urban.

A change in the composition of urban size groups was made also for the 1956 Census. At the 1951 Census, each municipality located within the boundaries of a census metropolitan area was allocated to an urban size group according to its own individual size. In 1956, each such municipality was classified to the same urban size group as the total metropolitan area of which it formed a part. In addition, the fringe parts of other major urban areas were included in the tabulations by urban size groups in the same manner as those of census metropolitan areas.

Table 5 presents the rural and urban population by province or territory for 1956. The rural is further classified by farm and non-farm residence and the urban by size of locality.

5.—Rural Population classified by Farm and Non-farm, and Urban Population classified by Size Group, by Province, Census 1956

Province or Territory	Rural			Urban				
	Farm ¹	Non-farm	Total	1,000 to 9,999	10,000 to 29,999	30,000 to 99,999	100,000 or Over	Total

¹ Excludes 115,168 persons living on farms in localities classed as urban.

Section 7.—Population of Counties and Census Divisions

Population totals for counties and census divisions for the census years 1951 and 1956 are presented in Table 6. Corresponding information for the census years 1901-41 is given in the 1952-53 Year Book, pp. 137-141. The 1956 populations of the subdivisions of the counties and census divisions may be found in Reports No. 1-1 to 1-5 of the 1956 Census of Canada, and further details for the earlier census years in *Ninth Census of Canada, 1951, Vol. I*.

¹ Includes district of Patricia.

Section 8.—Population of Incorporated Urban Centres

The growth of Canadian cities with populations of over 30,000 from 1951 to 1956, together with the years of their incorporation as cities, is shown in Table 7. All incorporated cities, towns and villages having populations of 1,000 or over in 1956 are listed in Table 10.

Port Arthur, Ont.....	1907	31,161	38,136				

For census purposes, metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. The total population of each of the census metropolitan areas in 1956, with the comparable figure from the 1951 Census covering the same area as in 1956, is shown in Table 8. In this table the metropolitan area has been named after the largest city of each urban group.

8.—Populations of Census Metropolitan Areas 1956 compared with Populations of Same Areas in 1951

Metropolitan Area	Population		Metropolitan Area	Population

¹ Not incorporated in 1951.

² Towns of Corner Brook E., Corner Brook W. and Curling amalgamated to form part of Corner Brook city Jan. 1, 1956.

³ Rural District in 1951.

⁴ Rural municipality of

St. Leonard-de-Port-Maurice in 1951.

⁵ Rural municipality in 1951.

⁶ Previous to 1953 called Lac-

St. Louis.

⁷ Rural municipality of St. Joseph in 1951.

⁸ Previous to June 16, 1951 called Beauport E.

⁹ Improvement District in 1951.

Section 9.—Sex and Age Distribution

Sex.—The sex distribution of the Canadian people has been characterized since early colonial times by a preponderance of males although this condition has been greatly modified in more recent years. In 1666 during the early years of settlement by French immigrants 63.3 p.c. of the population were males. In 1784 when British immigration to Canada was commencing there were 54,064 males and 50,759 females and by the middle of the 19th century there were 449,967 males to 440,294 females in Lower Canada and 499,067 males to 452,937 females in the more newly settled Upper Canada.

Since Confederation the newer sections of Canada—the west and the northwest—have shown the greatest excess of males. From 1871 to 1941, for Canada as a whole, the proportion of males never dropped below 51 p.c. of the total population whereas for Western Canada it varied between 53 p.c. and 59 p.c. By 1951, however, the proportion of males to the total population had dropped to 50.6 p.c. for Canada as a whole and in 1956 was 50.7 p.c.

11.—Sex Distribution of the Population by Province, Decennial Census Years 1931-51 and 1956

NOTE.—Figures for the census years 1871-1921 are given in the 1948-49 Year Book, p. 150.

Age.—The age distribution of a population is fundamental to most, if not all, other analyses, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology, and a multitude of events and activities that are of great importance in the national life.

Recent trends in vital rates and immigration have considerably changed the age composition of the population of Canada. A high birth rate together with a low death rate among children has added, between 1951 and 1956, nearly 1,000,000 to the population under 15 years of age and raised the proportion of this group to the total population from 30.3 p.c. to 32.5 p.c. On the other hand, the relative proportion of the working-age groups—persons from 15 to 64 years of age—was 2 p.c. lower at 59.8 p.c. in 1956 than in 1951 when 61.9 p.c. were in this age group. Without the influx of immigrants during the 1951-56 period, the proportion of this productive group would have been much lower since a large part of it consists of the survivors of those born in the 1930's when birth rates were at their lowest. The proportion of persons 65 years of age or over was slightly less than 8 p.c. at both census dates.

Table 12 shows the population of Canada classified by five-year age groups and sex for the census years 1941, 1951 and 1956. The provincial distribution by specified age groups as recorded in the 1956 Census is shown in Table 13.

Section 10.—Marital Status

Next to the sex and age distribution of a population, that of marital status is probably most fundamental from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population; if the proportion of females in this group is small, the expected proportion of births will also be small. In 1956, 64.3 p.c. of all married females were in the age group 15-44 years, as compared with 64.0 p.c. in 1951, 61.2 p.c. in 1941, and 63.5 p.c. in 1931. This trend indicates a movement towards conditions more favourable to a higher birth rate than those which existed during the period of world-wide depression.

The high birth rate of the period 1951-56, which has had such a considerable effect on the increase in the total population and on its age composition, has also been an influence on the increase of 15.7 p.c. in the single population. Most of this gain was in the population under 15 years of age. During the same period, the married population increased by 14.1 p.c., widowed by 10.5 p.c., and divorced by 14.9 p.c. Other striking statistics of marital status are the excess of married males over married females (largely owing to a preponderance of male immigrants whose wives had not yet joined them), the great preponderance of widows as compared to widowers and the large and increasing number of divorced persons.

Section 11.—Origins

A population composed of diverse racial stocks gives rise to political, economic and social problems quite different in nature from those of one with a small admixture of foreign elements although, to the extent that certain racial stocks are more readily assimilated than others, the problems are mitigated. It is equally true that the different educational, moral, economic, religious and political backgrounds of a people of mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English: historically the French is much the older and, excepting at the time of the 1921 Census, has always exceeded in numbers any one of the basic British stocks.

For purposes of the census a person's origin or cultural group is traced through his father. For example if a person's father is German and his mother Norwegian the origin is entered as "German". Wherever possible the origin of a person is established by asking the language spoken by the person or by his paternal ancestor when he first came to Canada.

Census of 1951 data are the latest available on origins of the population.

15.—Origins of the Population, Census Years 1931, 1941 and 1951

NOTE.—Figures for census years 1871-1921 are given in the 1948-49 Year Book, p. 154.

Section 12.—Religious Denominations

At each decennial census the numbers of persons attached to any religious denomination, as reported by the persons enumerated, have been recorded. The distribution of the principal denominations for the census years 1931, 1941 and 1951 is given in Table 16.

16.—Principal Religious Denominations of the Population, Census Years 1931, 1941 and 1951

NOTE.—More detailed figures for census years 1871-1921 are given in the 1948-49 Year Book, p. 155.

Section 13.—Countries of Birth

The decennial census collects information on the country of birth of immigrant arrivals in Canada and province of birth of Canadian born. For persons born outside of Canada the country of birth as constituted at the date of the census is recorded. Table 17 gives the total population by countries of birth for the census years 1931, 1941 and 1951.

17.—Countries of Birth of the Population, Census Years 1931, 1941 and 1951

NOTE.—Figures for census years 1871-1921 are given in the 1948-49 Year Book, p. 158.

¹Includes the 26 counties of Ireland in 1931 and 1941. ²Includes Lithuania and Ukraine. ³Includes Denmark, Iceland, Norway and Sweden. ⁴Includes Austria, Czechoslovakia, Hungary, Yugoslavia, Poland and Romania. ⁵Includes "birthplace not stated".

Section 14.—Languages and Mother Tongues

Official language is not to be confused with mother tongue. Mother tongue is the language a person first spoke in childhood and still understands; official language (a term used herein for census purposes) refers only to the English and French languages. The numbers of persons speaking one, both or neither of the official languages as at the date of the 1951 Census are given in Table 18, classified by province.

18.—Population Speaking One, Both or Neither of the Official Languages by Province, Census 1951

NOTE.—Infants are classed as speaking the language of the home.

Province or Territory	Population Speaking—			
	English Only	French Only	English and French	Neither English nor French
	No.	No.	No.	No.

Section 15.—Dwellings, Households and Families*

Households and Families.—Only a summary of the principal statistics on households and families recorded at the Census of 1956 is given here—more detailed information may be found in 1956 Census Reports 1-13 to 1-20 inclusive.

The total number and the average size of households and families for the census years 1951 and 1956 are shown in Table 20 for provinces and cities of 30,000 population or over. Similar figures for census metropolitan areas appear in Table 21. These figures show a consistent trend towards larger families in 1956 as compared with 1951, although the average size of household remained relatively stable over the five-year period.

* Census definitions are briefly as follows: **DWELLINGS.**—A *Dwelling* is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside. A *Single Detached Dwelling*, commonly called a single house, is a house containing one dwelling unit and completely separated on all sides from any other building or structure. *Apartments* and *Flats* include dwelling units in apartment blocks, suites in duplexes or triplexes, suites in structurally converted houses, living quarters located in business premises, janitor's quarters in schools, etc. In determining the number of *Rooms* in a dwelling, only those used or suitable for living purposes including rooms occupied by servants, lodgers, or members of lodging families are counted.

HOUSING.—A *Household* is a person or group of persons occupying one dwelling unit, the number of households thus equalling the number of occupied dwellings. Every person must be a member of some household, whether it consists of a family group with or without servants, lodgers, etc., a group of unrelated persons sharing a dwelling, or one person living alone. A dwelling is classed in need of *Major Repair* if it possesses any one of the following defects: sagging or rotting foundations indicated by cracked or leaning walls; faulty roof or chimney; unsafe outside steps or stairways; interior badly in need of repair. A *Crowded Dwelling* (or Household) is defined as one in which the number of persons exceeds the number of rooms occupied.

FAMILY.—A husband and wife (with or without children who have never married), or a parent with one or more children never married, living together in the same dwelling. Adopted children and step-children have the same status as natural children and, in fact, a family, for census purposes, may comprise a man or woman living with a guardianship child or ward under 21 years of age.

In Table 22 households are classified according to the number of persons, the number of family groups, and the number of lodgers they contain. This information is shown for Canada as a whole with comparable figures from the 1951 and 1956 Censuses. It will be seen that the two-person household was the most common household size in both years, and in 1956 two-person households represented nearly 22 p.c. of all households. The percentage of multiple-family households and households with lodgers showed a

decrease between 1951 and 1956. This is consistent with the fact previously stated that, although families showed a noticeable increase in size between 1951 and 1956, there was no corresponding increase in size of household.

22.—Household Composition, Census Years 1951 and 1956

Item	1951		1956

3+.....	83,420	2.4	82,391	2.1

In Table 23 families are classified according to whether or not they maintained their own households. Those not maintaining their own households fall into two main sub-categories—families related to the head of the household, and non-related lodging families. In addition, there are a few who do not fit either of these sub-categories, chiefly families of employees who live in their employer's household.

The percentage of families maintaining their own households rose from 90.2 in 1951 to 92.3 in 1956. This is again consistent with the earlier statement of a smaller percentage of multiple-family households in 1956 than in 1951. All of these indicators point to an improvement in living conditions over the five-year period.

23.—Percentage of Families in each Type of Household by Province, Census 1956

¹ Includes other types of families not maintaining own household.

Table 24 shows the number of children in families in 1956. This is limited to children never married under 25 years of age and living with their parents or guardians at the time of the 1956 Census. The number of children is classified to show the percentage of children in each of four separate age groups which correspond roughly with the pre-school children, those of elementary school age, those at the secondary school level, and those of college or working age.

24.—Percentage of Children at Home, 24 Years of Age or Under, by Age Group and Province, Census 1956

In Table 25 families are classified by age of family head and in Table 26 they are classified into two groups: those consisting of a husband and wife with or without children, and those consisting of one parent only. The latter are classified further according to the marital status and sex of the family head. Widowed heads form the bulk of this group.

Housing Characteristics.—A census of housing was not taken in 1956 so that the latest census information on housing characteristics is for the year 1951.

Table 27 shows that the increase in the number of dwellings during the 1941-51 decade was 11 p.c. higher than the increase in population, thus reducing the number of persons per dwelling from 4.3 to 4.0. Definition changes between 1941 and 1951 are partly responsible for the relatively larger increase in dwellings particularly of the apartment and flat type. Since owned dwellings increased by 49.1 p.c. and rented dwellings by only 4.2 p.c., it would appear that many people who were tenants in 1941 have since bought homes and that most new homes were built for owners rather than for tenant occupancy.

The 1941 Census of Housing was based on a 10 p.c. sample of dwellings situated within the nine provinces. For the 1951 Census the size of the sample was increased to 20 p.c. and the coverage included Newfoundland but, as in 1941, did not extend to the Yukon and Northwest Territories. For comparative purposes Newfoundland is omitted from the 1951 figures in Table 27. The number of occupied dwellings in Newfoundland in 1951 totalled 70,980 as against a 1945 figure of 62,293.

² Includes auto-trailers, houseboats, tents and other miscellaneous types.
³ For cities of 30,000 or over only.
⁴ For exclusive use of household.
⁵ Includes 'rent-free' dwellings.

The statistics of Table 27 reflect the higher level of prosperity at the latter decade in both urban and rural areas. In 1951 a higher percentage of homes had indoor plumbing, electricity and furnace heating, and had such conveniences as mechanical refrigerators,

electric vacuum cleaners, telephones, radios and passenger automobiles. There was a sharp drop in the number of homes needing major repair. Washing machines are not shown in Table 27 because there are no comparable 1941 figures but in 1951, 72.5 p.c. of the dwellings possessed a powered washing machine. Though much of this advance may be attributed to general prosperity, part of the trend is accounted for by the increasing urbanization of the Canadian population and the availability of modern conveniences to rural areas.

Annually since 1953 a sample survey on household facilities and equipment has been conducted in conjunction with the monthly labour force survey. Over 30,000 households chosen by random sampling methods in about 115 different areas are interviewed. Results of the 1956 survey are presented in Table 28.

28.—Housing Characteristics, Sample Survey, September 1956

Section 16.—The Blind and Deaf Population

The latest information on totally blind or deaf persons was recorded at the Census of 1951. Persons blind in one eye were not recorded as blind nor were partially deaf persons such as those able to hear with the help of a mechanical aid included as deaf. Table 29 shows the number and proportion of totally blind and/or deaf persons per 10,000 population in each province and territory. More detailed information on this subject is contained in Vol. II of the 1951 Census.

29.—Number of Blind and Deaf Persons and Proportion per 10,000 Population by Province, 1951

Section 17.—The Indians and Eskimos of Canada

The Indians.*—There are more than 155,000 native Indians in Canada today and it is noteworthy that their rate of increase is higher than that of any other segment of the population. They live on more than 2,200 tracts of land which have been reserved for their use and benefit. These reserves are located in every province with the exception of Newfoundland where the provincial government has a responsibility for Indians on the Island and the Coast of Labrador. Elsewhere in Canada, the Indian Affairs Branch of the Federal Department of Citizenship and Immigration is responsible for the administration of the Indian Act and matters affecting the welfare of Indians.

Administration.—The primary function of the Indian Affairs Branch, under the Indian Act, is to administer the affairs of Canadian Indians in a manner which will enable them to become increasingly self-supporting and independent members of the community. Among the important matters that come within the purview of Canadian Indian administration are: the management of Indian reserves and surrendered lands; tribal or band funds; education; welfare projects; relief; family allowances; rehabilitation of Indian veterans on reserves; descent of property; Indian treaty obligations; and enfranchisement of Indians.

The present Indian Act, proclaimed Sept. 4, 1951, was drawn up after a lengthy inquiry of a Special Committee of the Senate and the House of Commons, and after taking into account the views of the Indians themselves expressed at a conference held for that purpose. The overriding consideration which shaped the present Act was the desire to promote the integration of Indians into Canadian social and economic life.

As a means of achieving this, the Act makes provision for the election of Band councils whose authority extends over a number of areas of immediate concern to Indians resident on the reserve, including such matters as health, regulation of traffic, control of livestock, and management of fish, game and fur. Bands that have achieved an advanced stage of development may enact by-laws having to do with the raising, appropriation and expenditure of money.

While most Band councils are elected for a two-year term as provided in the Indian Act, some continue to adhere to appointment by tribal custom. All Bands however are given the opportunity to decide whether they wish to take advantage of the elective provisions of the Indian Act or to to adhere to tribal custom.

The Indian Affairs Branch takes a census of the Indian population under its jurisdiction at five-year intervals. The figures for the 1954 Census are given in Tables 31 and 32.

* Prepared in the Indian Affairs Branch, Department of Citizenship and Immigration, Ottawa.

Education.—The proportion of Indians who have become satisfactorily adjusted to modern conditions is of course greater among those who have taken full advantage of the Federal Government's educational program. Residential schools are available to Indian children from broken homes, orphans or those who, because of isolation or the nomadic way of life of their parents, would otherwise be unable to attend school. For children who can live at home the Federal Government operates day schools in Indian communities. Alternatively, where conditions are favourable, arrangements are made with local educational authorities for Indian children to attend non-Indian schools. An increasing number of Indian children in the elementary grades have been admitted to schools where other children are enrolled and the majority of Indian children attending secondary school and college classes are educated in association with non-Indians. The Federal Government pays the charges for school fees and books, necessary transportation and, for some students who must live away from home, part or all of the cost of room and board.

Similar assistance is given to Indian young people to encourage them to obtain vocational and professional training. Of those who have qualified as school teachers, 81 are now serving in Indian residential and day schools. Indians have qualified in medicine, dentistry, nursing, agriculture and other professions. Preference in appointment to positions in the Indian service is given to qualified Indians.

In the year ended Mar. 31, 1956, there were 476 Indian schools in operation comprising 66 residential schools, 368 regular day schools, 31 seasonal schools and 11 hospital schools. The enrolment in residential schools was 10,599 and in all other Indian schools 20,434. Enrolment by province was: Prince Edward Island, 38; Nova Scotia, 624; New Brunswick, 476; Quebec, 2,388; Ontario, 7,490; Manitoba, 4,581; Saskatchewan, 4,277; Alberta, 4,664; British Columbia, 6,188; and Yukon Territory, 307.

1956.....	10,599	10,113	20,434	17,697	31,033	27,810	89.6

In addition to pupils in Indian schools there were 4,644 Indian children enrolled in elementary grades in provincial and private schools and 1,555 in secondary schools and in higher education courses, making a total enrolment of Indians in educational classes of 37,305. In the year ended Mar. 31, 1956, there were 2,210 Indians receiving secondary and higher education.

Welfare.—During 1956, 21,572 Indian families received \$4,098,643 in family allowances on behalf of 68,210 children. These payments contributed substantially to a better balanced diet and better clothing for Indian children. Approximately \$3,000,000 is paid annually to Indians in the form of blind persons' allowances, disabled persons' allowances, old age assistance and old age security payments. When necessary the Government provides direct relief assistance to Indians in the form of food, fuel, clothing and household equipment. The Indian Affairs Branch also makes arrangements for private foster-home and institutional placement of children, juvenile delinquents, cripples and unemployable and aged adults. Assistance is also provided for unmarried mothers and for the rehabilitation of disabled Indians. Increasing emphasis is being placed on the importance of the suitable placement of children requiring protection and upon the importance of preventive work in the field of juvenile delinquency.

The provision of special foods as a preventive measure against tuberculosis was continued. Apart from the humanitarian aspect, the policy has as its aim a reduction in the number of new cases.

Improvement in housing conditions has been achieved recently through the efforts of the Indians themselves as a result of expenditures from government appropriations, from Indian Band funds, and through Veterans' Land Act benefits. Costs of house repairs during the year ended Mar. 31, 1957, amounted to \$397,554 and the total expenditure on new houses built on the various reserves was \$2,007,330. Of these amounts the Indians, through Band funds, Veterans' Land Act grants and personal contributions, provided over 54 p.c. of the cost of repairs and 49 p.c. of the expenditure on new housing. Revolving Fund loans are available for the purchase of farm machinery, gas and oil, fencing materials, seed grain, livestock and similar essentials, and also for payment of wages or reserve employment projects. The total in the Revolving Fund was increased early in 1957 from \$350,000 to \$1,000,000 to meet the increased demand for loans.

Fur Conservation.—During the year 1956 the fur conservation program undertaken in co-operation with the various provinces was continued. Approximately 179,930 beaver pelts valued at \$2,049,382 were taken in Manitoba, Saskatchewan and Ontario. In addition about 3,674,561 muskrats valued at approximately \$3,474,886 were trapped in Ontario, Manitoba and Saskatchewan. Benefits accruing to Indians in the three provinces from the trapping of these fur bearers amounted to about \$3,314,560. In Quebec, nine fur preserves with a total area of approximately 150,000 sq. miles are set aside exclusively for Indian trapping under joint management by the Indian Affairs Branch and the Quebec Department of Fish and Game. The six areas in production during the 1956 season produced 21,500 beaver which brought nearly \$300,000 to the Indian trappers.

Eight full-time supervisors are employed across Canada to help the Indians derive the fullest possible benefits from hunting and trapping.

The Eskimos.*—The Eskimos are only a fragment of the total population of Canada numbering, according to the 1956 Census, approximately 11,000 persons. However, they are part of the human resources of the country and, as such, are entitled to the benefits of Canadian citizenship and to assistance in adapting themselves to changing conditions. They, together with the Indians, represent the original inhabitants of Canada and their ingenuity and resourcefulness are illustrated by their ability to maintain existence against a harsh unrelenting climate in a region where food, being almost entirely fish or animal, requires great skill to obtain and is most unpredictable in its availability. Greater penetration into the Arctic from the south, an unstable, precarious fur market, a decreasing game supply and an increasing population have combined to alter the long established patterns of Arctic life very rapidly. The translation of Canada's northernmost citizens from the Stone Age to the Hydrogen Age is accompanied by many problems.

The Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources is responsible for the administration of Eskimo affairs. The Department of National Health and Welfare administers Eskimo health and medical services. Royal Canadian Mounted Police detachments throughout the north undertake field duties for both departments. In fact, the problems involved in looking after a sparse Eskimo population scattered over about 900,000 sq. miles of territory require the continuous co-operation of all northern inhabitants—teachers, missionaries, traders, doctors, nurses, administrators, radio operators and weather personnel. Administrative contact is maintained by radio and through the Central and Western Arctic and Eastern Arctic Patrols which carry representatives of the Administration and other government departments on an annual inspection tour. Officers of the Administration also make periodic visits by air.

Family allowances are paid to most Eskimos in kind from a list designed to supplement rather than supplant the normal native diet. Eskimos also enjoy the full benefits of old age security and assistance payments and of allowances for blind persons. Missions assisted by Federal Government grants operate hospitals at Aklavik, Chesterfield Inlet and Pangnirtung, and the Department of National Health and Welfare has nursing stations at Coppermine, Frobisher Bay, Lake Harbour, Cape Dorset, Hall Lake, Fort Chimo, Port Harrison and Great Whale River. Tuberculosis and other medical surveys are carried out from year to year and treatment where necessary is provided either at the hospitals within the territory or at larger institutions outside.

The Arctic Division of the Department of Northern Affairs and National Resources studies and deals with Eskimo problems. Many Eskimos have taken advantage of unprecedented opportunities for wage employment with mining companies, on the Mid-Canada and DEW radar lines, in transportation and communications, in government construction and with traders and missionaries. In many communities, the shift from the traditional trapping-hunting economy has been very sharp. While raising living standards, wage employment has added to the immediate problems of adjustment.

* Prepared in the Editorial and Information Division of the Department of Northern Affairs and National Resources, Ottawa.

Much of the activity of the Arctic Division is based upon guiding the Eskimos through this difficult period. Field staff is growing constantly. Northern Service Officers are now posted at Frobisher Bay, Cape Dorset, Fort Chimo, Great Whale River, Churchill, Baker Lake, Tuktoyaktuk and Cambridge Bay. Some are assigned to the DEW Line where they provide guidance and assistance to Eskimos newly taking up wage employment; others are assigned to very remote areas where the full impact of an industrial society has yet to be felt. Social workers have been appointed to help solve some of the social problems arising out of a new economy. Welfare services for Eskimos in the Arctic and in southern hospitals are being expanded.

At Frobisher Bay on southern Baffin Island, a Rehabilitation Centre comprising thirteen buildings has been completed. The houses include kitchen-dining rooms, bath house-laundries and workshops. The remainder will be occupied by former Eskimo patients who, for various reasons, are no longer able to support themselves on the land. By developing special skills, they will once again become productive members of society.

Projects, mainly on an experimental basis, are being carried out in order to expand and diversify the Eskimo economy. Handicrafts not only provide revenue but also a means of cultural self-expression. Reindeer herding in the Mackenzie Delta, animal husbandry at Fort Chimo, eiderdown collecting on Baffin Island and Ungava Bay, sealskin tanning, boat-building, and the manufacture of arctic clothing are a few of the undertakings. Eskimos in overpopulated or depleted areas are being encouraged and assisted to move to areas where game is more plentiful or where employment is to be found. A fund has been established from which loans may be made to assist Eskimos to carry out approved projects for the betterment of their economy.

Since 1945, the Government has built fourteen schools primarily for Eskimo children. They are at centres spreading from the Mackenzie Delta to northern Quebec. Missions assisted by government grants also operate schools in many Eskimo settlements. Vocational training courses for young Eskimos have been started in the south to help develop their mechanical aptitudes and to provide new opportunities for employment.

Section 18.—Statistics of World Population

World population figures given in Table 34 are from the United Nations *Population and Vital Statistics Reports* for January 1957 and, except as otherwise noted, are official mid-year estimates for 1955. The area figures are from the United Nations *Statistical Yearbook, 1956*.

Estimated Population of the World by Continents.—The statement below, published by the United Nations, presents estimates of the 1955 mid-year population by continental divisions. These continental totals are not always the sum of the estimates for individual countries given in Table 34 because, where considered necessary, adjustments have been made in order to arrive at the most reasonable estimates under existing circumstances. The world total must be regarded only as an approximate estimate, the data for Africa and Asia being subject to considerable error.

PART I.—IMMIGRATION AND EMIGRATION

The standard material appearing in each Year Book under the heading of "Immigration Policy and Administration" is superseded in this edition by a special article which deals in detail with the history of immigration and the Immigration Act and Regulations.

DEVELOPMENTS IN CANADIAN IMMIGRATION*

The process of settlement in what is now Canada has been slow and discontinuous, its cyclical pattern formed by geographical factors and no less by internal and external political and economic circumstances which created periods of desire for and availability of settlers and immigrants.

Canada has four clearly defined east-west geographical regions, separated by topographical barriers and distinguished with respect to soil, forest cover, elevation, climate, resources and natural lines of transportation and communication. In the history of settlement, people did not move easily from one region to another but it is significant that, with the development of water and land transportation facilities, settlement eventually took place from east to west in defiance of the logic of geography.

These four regions are extensions northward of the far deeper regions that dominate the topography of the United States. They engendered similar processes of settlement, similar economic activities and life in both countries, though the peoples inhabiting them developed separate national existences. Such geographic and economic similarity, however, assisted a relatively free exchange of people across the political boundary.

The relative difficulty that Canada has encountered in attracting and holding both immigrant and native-born people may also be explained by considering the settlement of Canada and of the United States not as parallel but as integral processes. What is

* Contributed by the Department of Citizenship and Immigration.

now Canadian territory has lain on the periphery of a vast settlement area, the shifting centres of which are and have been to the south and have inevitably attracted and, to a lesser extent, continue to attract peoples from the periphery. The major migration from each country has been to the other.

IMMIGRATION TO CANADA

SETTLEMENT AND IMMIGRATION

Occupation of what is now Canadian territory had an uncertain start in the oldest British colony and the youngest province of Canada—Newfoundland—which was claimed by Britain in 1583. Permanent settlement, however, was long deferred. The foundations of Canadian population were laid by people French in origin and language, who today constitute over 30 p.c. of the population. They are unique in that they have been an indigenous, self-perpetuating society for more than 200 years. Their immigrant basis is estimated to have been no more than 10,000 settlers who arrived during the 150 years preceding the British conquest (1763). At that time the French population numbered about 65,000 from whom the present population of 4,628,378 (Census 1956), not to mention those who emigrated to the United States, is largely descended.

Most important in point of numbers and second in point of time, among the sources of Canada's population, have been immigrants of British Isles origin coming either directly from overseas or entering from the United States after one or more generations of settlement there.

The cession of Acadia (1713) to Great Britain was followed in 1749 by the establishment of Halifax as a military base, and the first British effort at colonization. Along with people from England came some 2,500 migrants from Germany who settled at Lunenburg. The way for larger settlement, however, was not finally cleared until the expulsion of the Acadians in 1755, the final capture of Louisburg in 1758 and the fall of Quebec in 1759. Soon after, thousands of new settlers came chiefly from the New England States, the first of the interregional movements which have been characteristic of the population relations of Canada and the United States.

On the eve of the Revolution of the Thirteen Colonies (1776), the population of what is now Canada was about 110,000 to which was soon added over 40,000 persons—disbanded troops, refugees and Loyalists who sought new lands and homes in the remaining British colonies to the north. Nova Scotia gained 22,000 and Cape Breton 400, New Brunswick, established as a separate colony in 1784, received 14,000, Prince Edward Island 600, Lower Canada 3,000 and Upper Canada 10,000. From 1783 to 1812 migration into the British colonies continued with the 'late Loyalists' gradually shading off into a migration of pioneer American farmers who came in the traditional search for new and better lands. Among these were German Mennonites from Pennsylvania who settled on the Grand River in what is now Waterloo County in Ontario. Another successful settlement was that of Colonel Thomas Talbot who had been given a grant of land on Lake Erie in 1803. Actual settlement there began in 1809 with an influx of farmers from Pennsylvania, New Jersey, the Maritime Colonies and from the British Isles. Talbot Road was long one of the great roads through the province which attracted other settlers in quest of land.

Until 1815 migration from the British Isles remained small and was made up mainly of Scottish Highlanders many of whom came in groups such as the one led by Lord Selkirk which settled on Prince Edward Island in 1803. And between 1802 and 1828 some 25,000 Highlanders settled on Cape Breton Island which remains Highland Scottish to this day.

After the Napoleonic Wars a large migration set in from the British Isles to the North American Continent. Up to 1840 about 500,000 persons left for Canada and 420,000 for the United States; the peak year of departure for Canada was 1832 when immigrants numbered 66,000. But from 1834 until 1910 the annual British immigration destined to the United States always exceeded that to Canada. For instance, between 1846 and 1854, 1,750,000 persons left the British Isles for the United States and not quite 500,000 for Canada. These migrants were mainly from Ireland which was then suffering an extensive famine.

From 1670 to 1869 the territories that are now the Provinces of Manitoba, Saskatchewan and Alberta were governed by the Hudson's Bay Company and, except for the Scottish colony established in 1811 at Selkirk on the Red River, no attempt was made at settlement during that time. In 1869, two years after the British North America Act had united the Provinces of Ontario, Quebec, Nova Scotia and New Brunswick to form the nucleus of what is now Canada, these territories were acquired from the Company by the Canadian Government. Under the Homestead Act of 1872 and the Dominion Land Act of 1874 free, quarter-section homesteads were made available for which any head of family or adult person might acquire patent after three years subject to certain conditions of tillage. For a time, transportation difficulties and the attraction of the more prosperous United States diverted many of the arriving immigrants. The easier and therefore more popular route to the Canadian mid-west lay by rail through the United States by way of Chicago and St. Paul or by water to Duluth and then by rail to the Red River and from there by boat or stage to Fort Garry. But the completion of a railroad from Minneapolis and St. Paul to Winnipeg in 1878 was a step towards the solution of this transportation difficulty and the number of settlers mounted steadily.

Even though between the years 1874 and 1879 the first major settlements were established south of Winnipeg by some 7,000 German-speaking Mennonites from southern Russia who were accustomed to the steppe, and by a group of Icelanders who settled near Lake Winnipeg and in southern Manitoba, the immigration of this period was largely of people from Eastern Canada whose agricultural background was of farms won from timbered lands. Following the construction of the Canadian Pacific Railway which reached Winnipeg in 1882, development became more pronounced. Large-scale projects, assisted settlement, and religious enterprises brought thousands of settlers from the British Isles and Continental Europe. By 1891 the population of Manitoba and the North West Territories, which had been 118,706 in 1881, had reached 251,473, of whom only 11,150 were in what later became Saskatchewan.

Meanwhile in 1871 the colony of British Columbia had entered Confederation with a population of about 10,500. Until 1858, when the colony was created, the Hudson's Bay posts were the only evidence of the white man's presence west of the Canadian Rockies. The discovery of gold on the Fraser River and later in the Cariboo Creeks brought the first shifting wave of settlers of many different races from the United States and some overland from Eastern Canada. When the flow of gold slackened in 1865 and 1866 and Vancouver Island became united with the mainland, a fairly permanent nucleus had formed made up mainly of Americans but including also a 'solid' British group of Hudson's Bay Company officials as well as a Canadian-born element. It was during the subsequent road and railway building period that the first Chinese immigrants appeared in British Columbia, the beginning of the Asiatic element which later became a factor in that population. The Canadian Pacific Railway was completed to Vancouver in 1885, overcoming for the settler the great barrier of the Rocky Mountains.

The early 1890's in Western Canada was a period of stagnation and despair and immigration all but ceased. But when the Hon. Clifford Sifton became Minister of the Interior in 1896 he initiated a vigorous promotion of immigration and changes in economic conditions helped to ensure the success of the new policy. A long depression and decline in wheat prices was reversed after 1893 and general recovery of world markets brought increasing demands for wheat. In "Manitoba No. 1 Hard" the Canadian West had developed a wheat strain adapted to the conditions of growth in the western prairies and later developments of other famous strains helped to extend the areas of cultivation. The new immigration policy aimed especially at persuading American settlers to come to Canada. People from the United States had begun to drift in for some years as the more fertile lands in the Western States and free lands were becoming scarce. Their numbers increased rapidly as did migration to the West from the older Canadian provinces. Although agriculturists from Great Britain were also encouraged to come to Canada, from 1899 to 1903 Continental European entries were about double the British. This period saw the introduction of the first major change in the ethnic composition of the Canadian population since 1763. Beginning in 1895 several thousand east-Europeans arrived each year settling in southern Saskatchewan and Manitoba. They were part of the 'new' immigration to North America from Austria, Poland, Russia, Hungary, the Balkans and Italy in contrast to the 'old' immigration which had been largely from northern and western Europe.

From 1905, when the Provinces of Saskatchewan and Alberta were formed, to the beginning of World War I there was a period of great prosperity in Western Canada and, from all sources, Canada received the largest immigration in its history. The peak year was 1913 when 400,870 immigrants arrived, 150,000 of them from Great Britain, 140,000 from the United States and the remainder from Continental Europe. The amount of land granted in homesteads and pre-emptions on the prairies doubled from 1905 to 1911. Railways and roads were extended, farms bought, towns built, capital invested and the demand for labour and goods was high. The frontier moved every day.

The break in the flow of immigration from Britain caused by the War lasted until 1920 and from Continental Europe until 1921. However, during this period economic development and colonization continued rapidly because of the tremendous demand for wheat and many American settlers came to locate on the plains. The depression of 1920-23 brought the first recession of settlement, but when conditions improved the Peace River District and northern areas of the Prairie Provinces became the main targets of the land-hungry farmers' sons from the prairies as well as of new immigrants. Immigration reached a new peak between 1926 and 1929, although not the proportions of the prewar years. According to the census, about 20 p.c. of the newcomers to Canada between 1921 and 1931 settled in the cities and most of the remainder in rural Western Canada.

With the onset of the depression of the 1930's, immigration was almost totally arrested. During 1931-40 only 158,562 immigrants arrived compared with 1,230,202 in the preceding ten years. It is difficult to say to what extent this decline was caused by depressed conditions prevailing in Canada and elsewhere and to what extent it was caused by restrictive regulations, though the restrictions on immigration were, of course, imposed as a result of the depression.

Since the end of World War II, and especially during the period 1948-57, immigration increased markedly when it became evident that Canadian industry had accomplished the transition to a peacetime economy without serious dislocation and that a new postwar era of economic expansion was at hand. Canada's remarkable postwar economic growth,

based upon the accelerated development of mineral, forest and water power resources and the ancillary services of roads, railways, pipelines and townsites involved in a succession of huge projects—many in previously untapped hinterlands—provided the political and economic climate for a sustained wave of immigration mainly from the British Isles and Continental Europe that totalled 1,387,176 for the period 1946 to 1956 and will easily surpass 1,500,000 by the close of 1957. Some analysis of immigration during recent postwar years will be found in the statistical section immediately following this article.

IMMIGRATION AND POPULATION GROWTH

Along with the contribution of immigrants to the settlement of Canadian territory, immigration also has been associated with the peak periods of growth of the Canadian population. These peaks in turn have been related to certain important events in history—Frontenac's term of office, the American Revolution, the Irish famine, the first building of the railways, the colonization of the West, and finally to the industrialization and the opening of the hinterland of the Canadian Shield. Before 1869 immigration and the peaks of population growth it effected were incidental to the historical events noted. Since the turn of the century the growth of the population by immigration has been the result of government policies and of economic conditions occasioning them. The following statement gives the numerical and percentage growth of the population of Canada from, 1851 to 1956. The percentage column indicates the cyclical character of this growth.

NUMERICAL AND PERCENTAGE INCREASE IN THE POPULATION, TEN-YEAR PERIODS 1851-1951 AND 1951-56

Period Ended—	Population	Increase		Period Ended—	Population	Increase	
	No.	No.	p.c.		No.	No.	p.c.
1851.....	2,436,297	1911.....	7,206,643	1,835,328	34.2
1861.....	3,229,633	793,336	32.6	1921.....	8,787,949	1,581,306	21.9
1871.....	3,689,257	459,624	14.2	1931.....	10,376,786	1,588,837	18.1
1881.....	4,324,810	635,553	17.2	1941.....	11,506,655	1,129,869	10.9
1891.....	4,833,239	508,429	11.8	1951.....	14,009,429 ¹	2,502,774 ¹	21.8 ¹

¹ Newfoundland included in the total for 1951 but not for 1941; without Newfoundland the increase was 2,141,358 or 18.6 p.c.

² Includes Newfoundland.

EMIGRATION FROM CANADA

In considering the impetus to growth which Canada received from immigration, it must be noted that, compared with the United States, Canada has held relatively weak attraction for settlers for long periods. The preference of migrants for the United States pre-dates the emergence of Canada as a separate political entity, and many factors combined to form this preference. Climate and topography favoured the southern areas, as did the more advanced economic conditions in the United States. The pull of kinship and ethnic ties drew the migrants to settle near friends or relatives or near people from similar regions or countries of origin. The United States offered the prospective settler more favourable conditions of land purchase and tenure. With a more diversified economy it also offered more to the unskilled labourer who did not wish to be a farmer. The early extensive development of roads and navigation offered increasing economic opportunities.

In 1791 the United States had a population of 4,000,000 while the British colonies had about 220,000. As a group the British colonies had little economic or political integration, being divided in language and purpose and cut off from one another by geographical barriers. The territories west of Lake Ontario were unsettled and were left to the fur traders and the Indians. A small and scattered population had no prospect of economic self-sufficiency.

In 1839 Lord Durham contrasted conditions on both sides of the line. "By describing one side", he said, "and reversing the picture the other would also be described. On the American side all is activity and bustle On the British side of the line . . . all seems waste and desolate" Thousands of arrivals as they gained familiarity with conditions left again for the United States. Lord Durham placed the figure at 60 p.c.

From 1851 onward there are more exact measures of these out movements and their relation to population growth. Table 2 shows that while many immigrants continued to come to Canada between 1861 and 1901, a good number of them re-emigrated. It appears also that the natural increase of the Canadian population was partly offset by emigration of native-born.

Many reasons have been offered to account for this outflow. The Canadian Shield which extends throughout northern Ontario continued to be a barrier in Canada to the westward movement so characteristic of American settlement. The growth of industry was much inhibited by the small domestic market and the dominance of Great Britain in this area. The railway and land booms in the United States drew settlers westward from every part of the United States as well as from Canada and especially from Ontario. French-Canadians, who had begun to leave even before 1850, migrated in increasing numbers after 1873 for the textile mills in the New England States. New arrivals from overseas caught the prevailing spirit and joined the trek to that country. The industrial development of the eastern States, made possible by the western expansion, created a heavy demand for general labourers as well as for those with technical skills.

This earlier emigration was primarily in response to the attraction of new and cheap lands, but the movement of more recent times has been primarily urban. Even before 1914 various types of skilled and professional persons had begun to leave. Canadian railroadmen, engineers, artisans, nurses, teachers, clergymen, writers, doctors and actors had been locating in the United States and were being actively recruited by American employers.

World War I created special demands for labour. After the War the imposition of quotas on immigration by the United States cut the supply of immigrant labour on which American industry had come to depend but these restrictions did not apply to Canadians. During 1921-31 Canadians made up the largest group of immigrants into the United States from all sources, representing nearly one-quarter of the total. This trend was sharply reversed during 1931-41 when, it is estimated, there was a considerable excess of Canadians returning to Canada over the numbers who left for the United States.†

In the United States Census of 1950 the Canadian-born were the second largest group of foreign-born, constituting about 10 p.c. of their number. As for occupational distribution in 1950, both male and female Canadian immigrants to the United States were more fully represented in the professional, managerial and craftsmen groups than the United States labour force as a whole.

* Sir Charles Lucas, *Lord Durham's Report* (Oxford 1912), Vol. 2, p. 212.

† According to an estimate based on the United States Census, there was a net loss of 123,000 among the Canadian-born residing in the United States during the 1931-41 decade. Nathan Keyfitz, *The Growth of Canadian Population Studies*, Vol. IV, No. 1, June 1950, p. 60.

On the basis of the Census of Canada data, the balance of migration is summarized in the following statement.

POPULATION BALANCE SHEET, 1851-1956

Period	Births	Deaths	Immigration	Emigration (Residual)	Net Immigration	Population at End of Decade
	'000	'000	'000	'000	'000	'000
1851.....	2,436
1851-1861.....	1,281	611	209	85	+124	3,230
1861-1871.....	1,369	718	187	379	-192	3,689
1871-1881.....	1,477	754	353	440	-87	4,325
1881-1891.....	1,538	824	903	1,109	-206	4,833
1891-1901.....	1,546	828	326	506	-180	5,371
1901-1911.....	1,931	811	1,759	1,043	+716	7,207
1911-1921.....	2,338	988 ¹	1,612	1,381	+231	8,788
1921-1931.....	2,415	1,055	1,203	974	+229	10,377
1931-1941.....	2,294	1,072	150	242	-92	11,507
1941-1951.....	3,186	1,214	548	379	+169	13,648 ²
1951-1956 ³	2,106	633	783	184	+599	16,081

¹ Excludes extra mortality associated with World War I, estimated at 120,000, which became a province of Canada in 1949 and had a population of 361,416 in 1951.

² Excludes Newfoundland
³ Includes Newfoundland.

This apparently unfavourable balance of migration has given rise to a number of interpretations. Some students have thought that both immigrants and the Canadian-born migrants represented an 'overflow' and conversely that the numbers Canada has retained comprise its 'absorptive capacity', an idea which, superficially at least, verges on the tautological. Distinctions have been made between the movement of immigrants and Canadian-born, suggesting that the former displaced the latter and that, if there had been no emigration of the Canadian-born, natural increase without immigration would have been sufficient to give Canada the population it now has. Others have held that, given the opportunity to emigrate, the Canadian population would have been even smaller if it had not been for immigration.

The value of such studies is limited at least partly by certain unstated assumptions, by the scarcity of data, and because they involve the difficult theory that Canada's absorptive capacity is basically independent of that of the United States. It is suggested rather that the long processes of the settlement and economic development of the North American Continent must be considered as a whole and that political boundaries more often than not have had only secondary influence. Population movements into and within the areas of North America then are integral and not separate aspects of the distribution and re-distribution of people geographically and occupationally, in accord with the 'push' and 'pull' factors operating at any time in the whole or in its parts.*

In the aggregate, emigration and re-emigration from Canada have involved the movement of several million people, spread unevenly over a hundred years and more. The size of these movements and the fact that they have continued, might alone raise doubts that they could ever be explained by sole reference to conditions existing in Canada. It has been maintained† that "since 1851 Canada brought in several millions of immigrants

* Brinley Thomas, *Migration and Economic Growth* (Cambridge University Press, 1954), pp. 134-138. For an early formulation of such a thesis see *Annex to the Report of the Minister of Agriculture for 1889*, Apr. 14, 1890, in *State Papers, Emigration to Canada*.

more than could be absorbed. This was a costly and confusing procedure but more serious maladjustments were prevented by the fact that there was an open door into the United States which acted as a safety valve to draw off the surplus."

In order to account for the emigration of Canadian-born a complementary logic has suggested that immigrants had displaced them,* although this theory shows little appreciation of at least the regional interrelationship of labour markets of the two countries. It has been suggested also that more consideration be given to the 'intention component' in migration. "One may wonder if suitable account has been taken of the destination of the immigrant; whether he will settle here or is *en route* to some other country after a longer or shorter period in Canada. This is an intrinsic difficulty arising out of the intention component of any definition of an immigrant that does not provide for a follow-up."†

This component in the main has been observable only in its results and its character is necessarily elusive if it is taken to involve more than what in retrospect appears to have been a misstatement of destination on the part of several million immigrants. It suggests, perhaps, that if in relation to immigration, consideration were given to the area of Canada alone, it would become as difficult to understand why millions should have moved into Canada as it is to understand emigration out of Canada by sole reference to conditions there, unless the target of the vast overseas migrations was in the first place "America", that is, the North American Continent.

It has been said respecting earlier migration that "it is the merest accident that millions of inhabitants of North America are living in their particular locality, for the considerations that led their ancestors to Virginia, Upper Canada, or the shores of the Missouri were frequently unbelievably trivial. A ship sailing on the day they reached the seaport, the destination of a chance acquaintance, or the suggestion of a propagandist led thousands to embark for New York, Quebec or New Orleans, while others *after their arrival* settled the matter whether they were to be Americans or Canadians, canal labourers, Kansas squatters, prairie farmers, or lumbermen in the wilds of New Brunswick or Minnesota."‡

It seems evident from the record that as immigrants developed a more marked sense of direction (after 1850 perhaps), British North America and Canada increasingly came to be seen in an ancillary or peripheral relation to the developing civilization of the United States. The concept 'Canada' has been of slow growth and this country's increasing emergence as an individualized and final destination began mainly at the turn of the century. However, immigration to America has had the force of a powerful myth which immigration to Canada, until very recently perhaps, has never had.

From this point of view the hundreds of thousands of immigrants who gave their destination as Canada were in effect giving Canada as their first destination in North America. This may seem a re-statement of the obvious. It seems to mean, however, that the number of immigrant entries and the number that left again do not necessarily constitute objective data for interpretations of absorptive capacity.

It may be noted finally that the intention component eventually must be explicable in terms of the individual immigrants. While the chance elements determining destination, referred to earlier, were evidently reduced as migration developed, mobility remains as a basic competitive asset of immigrants. The first aim of the immigrant always must be

to make a living, wherever this might lead. As long as there are places where he may do so on more favourable terms than where he happens to be and, if the place is accessible, a little travel makes no difference. The new environment is a means to an end and means little to him. Most immigrants must find their own passage and make their own decision to migrate. A shorter or longer stay, even under normally difficult beginnings in Canada, mobilizes immigrants once more to seek what they might consider more favourable conditions in the United States. The history of planned colonization schemes and assisted passage schemes has, with some outstanding exceptions, been largely one of failures since the objectives of the individual migrants are usually at variance with the objectives of the organizer.

Immigrants to Canada, therefore, may for some time be undecided whether "to become a population". In the past it would seem that the decision has led many of them to the United States.

THE EMIGRATION OF CANADIAN-BORN

As previously noted, some students have held that Canadian emigrants to the United States were being displaced by immigrants, though this view has seemed to rest on mere assertion without specific documentation. It is also often said that the Canadian-born, as would any people living next door to another country whose standard of living is rising faster than its own, were bound to be drawn to the United States, especially in the absence of any restriction on movement. Whether a higher standard of living or higher salaries and wages are adequate explanations is questionable, since Canadian emigrants tend to go to cities where the cost of living is also higher than at home. It is held rather that Canada as a little-populated but relatively prosperous country with good educational institutions has not always been able to absorb the skills and energies it creates, and therefore has not been able to offer enough of the higher paid positions which the emigrants have sought in the United States.

It appears that Canadians may actually have prepared themselves for emigration. In a study made of six groups of university graduates of the period 1920-36, three groups showed an absolute increase in number—doctors, clergymen and engineers. Graduates in these groups were generally in demand also in the United States. The other three—"lawyers unfamiliar with American law, dentists confronting the home of modern dental science, and pharmacists facing a profession unnaturally inflated by Prohibition"—declined in number.

If the concept 'Canada' has been slow to assert itself against 'America' in the minds of overseas migrants, the Canadian-born on the other hand who left for the United States did not migrate to a 'foreign' country. He seems to have behaved rather like other North Americans. Historically, the emigrant going to the American Colonies before 1776 might be going to the Maritimes, Newfoundland, or what are now the American Atlantic States and continue to move between these areas. After the American Revolution, movement from British North America technically became emigration. While political conditions, of course, have not been without effect the evidence is abundant that both Americans and Canadians, until the most recent times, have tended to ignore the boundary when it stood in the way of their individual purposes. Their growing nationalisms have lacked the reinforcements of profound differences in history, ethos and language which exist elsewhere, and the open border has been evidence of their inconclusive character quite as much as it is symptomatic of the profound interrelationship of the labour markets of the two countries. The numerical imbalance of the exchange of population which has favoured the United States is, from this point perhaps, relatively unimportant. However, as Canada in its growth is beginning to match the powerful pull exerted by American industry,

* Marcus Lee Hansen, *The Mingling of the Canadian and American People* (Yale University Press, 1941), p. 262. Cf. DBS, *Supply and Demand in the Professions in Canada*.

educational institutions, diversified social life and standards, this migration may be reduced although perhaps never permanently arrested. Some might not even consider this desirable. Whatever the combination of causes may be, from 1930 to 1950 there was a decline in the emigration of Canadian-born. The largest number of Canadian-born ever recorded in the United States Census was 1,278,512 in 1930 (not including Newfoundland). In 1940 it had declined to 1,044,119, and in 1950 to 994,562. From 1950 to July 1, 1955, however, the number of Canadian immigrants was between 130,000 and 140,000, bringing the total Canadian-born population in the United States once more to over a million, after allowing for deaths and emigration since 1950.

The decline in emigration becomes more meaningful when the emigrants are taken as a percentage of the growing Canadian population. The number of Canadian-born in the United States as a percentage of the number of Canadian-born in Canada had reached its maximum at the beginning of the present century when the figure was 25 p.c. In 1930 it was 15.8 p.c. and in 1950 it was only 8.3 p.c.

In summary of the period 1941-51, the natural increase in the population amounted to 1,972,394 or 92.1 p.c. of the 2,141,358 population increase in Canada (not including Newfoundland). The balance amounting to 168,964 represents the estimated excess of immigration over emigration for this period. Actual immigration between the 1941-51 Censuses was 547,882. Hence apparent emigration from Canada to other countries over this decade was 378,918. It is not possible to determine exactly how many of these emigrants were Canadian-born and how many were of immigrant origin. The following statement gives an indication of the relative proportions of native-born and non-Canadian-born among the emigrants at the Census dates 1941 and 1951.

The statement shows the difference between the expected and actual population at the 1951 Census of Canadian-born, British Isles-born and United States-born. The amount of the total difference who were Canadian-born was 229,272 or 60 p.c. It would seem, then, that emigration for the decade 1941-51 was composed of about three-fifths Canadian-born and two-fifths non-Canadian-born persons.

ABSORPTIVE CAPACITY

Enough has been said, perhaps, to suggest that net immigration has been no clear index of Canada's absorptive capacity and that the development of immigration could scarcely be based on some of the interpretations offered of past experience.

In 1947 it became evident that the transition in Canada from a wartime to a peacetime economy was taking place without any serious dislocation. It also became evident that the expansion might be sustained if the financial resources could be matched by labour power and a large population increase. In this, two trends had to be taken into account—the decline over several decades of the rate of natural increase and the historic problem of emigration. Also a relatively short-term problem had to be met by specific measures. The unusually low birth rate during the depression years had created a shortage of persons in the age groups entering the labour market during the latter part of 1941-51 decade. Immigration was therefore encouraged to relieve both the short-term problem and serve long-range objectives. The continuing expansion of the economy continues to absorb large numbers of newcomers who have not only made up for the lack of Canadian workers but have utilized the opportunities offered by the Canadian economy through capital they have brought with them, through the application of special skills and trade processes and through their mobility. By the establishment of new businesses, and the introduction of improved and new processes, they have created additional consumer demands and products.

By the end of 1954, over 1,000,000 people had entered Canada since 1947. In addition, the native-born children of these immigrants in the same period are estimated at some 200,000. This represents a very substantial addition to the body of Canadian consumers and an advance toward the development of mass markets for goods and services. It is also noteworthy that the bulk of immigrants is concentrated in the taxpaying and heavy consuming age groups, a factor that will help to reduce the high overhead costs of maintaining the Canadian standard of living at its present level.

It is in such considerations that operating principles of fitting immigration to absorptive capacity may be found rather than in theories which aim at some final figure of how many might be absorbed or have been absorbed in the past.

Along with the need for compromising between the short-term and long-term objectives of immigration, the implementation of the immigration policy has had to be adapted to such considerations as the availability of transportation, the availability of suitable immigrants who are usually the desirable citizens in their home countries, the degree of tolerance of other countries to being considered a recruiting ground for immigrants to Canada, the decline of both 'push' and 'pull' forces because of the gradual improvement in economic and social conditions in most western countries, the willingness or otherwise of the Canadian people to accept some or all types of immigrants, and many other similar factors.

GROWTH OF IMMIGRATION LEGISLATION

Canada passed her first Immigration Act in 1869 (32-33 Vict., c. 10), two years after Confederation. Principles embodied in this and in succeeding Immigration Acts are in large part deeply rooted in the earlier experience with immigration. The next comprehensive legislation was the Act of 1910 (9-10 Edw. VII, c. 27) which, with amendments, was in force until it was superseded by the present Immigration Act (R.S.C. 1952, c. 325). In tracing some of the additions and changes that led to the Act and Regulations at present in force, it should be kept in mind that throughout the years the motives of migrants, requirements of the receiving country, problems of control, health, welfare, assimilability, protection of the immigrants and of the native community have remained fundamentally unchanged.

EARLY CONTROL MEASURES

There was at first no legislation of any kind to govern the entrance of people into what is now Canada. The earliest measures had their origin in the conditions of ocean transportation.* While of considerable interest to the struggling colonies, this was a problem chiefly for the Imperial Government. Meanwhile the failure to control shipping gave rise

* Stanley C. Johnson, *A History of Emigration* (London 1913), Chap. V.

to quarantine and related measures at the receiving ports of Halifax, Quebec, Saint John and Montreal. The usually destitute condition of the arriving immigrants, related to the continuing frightful conditions of shipping and to the general poverty of those who were forced to migrate from the British Isles, also prompted local regulations.

Until the 1820's the British Government was officially opposed to emigration, though military considerations resulted in some Canadian settlements. When the outlook changed, emigration was seen rather as an alleviation for misery, unemployment and pauperism at home than as a means of advancing the interests of the colonies. The colonies, on the other hand, welcomed the fit and intelligent for whom there was no lack of employment. But there were increasing protests against the unloading of the destitute, the paupers and the unfit who were variously assisted to leave for Canada and the United States because they were a burden at home. The early adoption by several American States of protective measures resulted in thousands of the latter being diverted to Canadian ports. In 1831-32 at least 20,000 arrived.*

It is evident that the floods of newcomers even under the best of conditions would have created problems for those who preceded them. The receiving situation was worsened by the effects of the horrifying conditions of travel of that time. Before the middle of the 19th century, voyages were arduous and dangerous and long journeys were difficult and expensive. In the 17th century a trip from France to Canada took about two months, and as many as 40 to 50 p.c. of the passengers died during the voyage. Around the middle of the 19th century the average passage took about a month and a half and deaths at sea were still commonplace. Ships were few, small, crowded and lacked sanitary facilities and were known as "floating coffins".

Preparations for immigrant reception and distribution were inadequate. The port cities and districts were often overcrowded and their resources drained in caring for and protecting themselves against the newcomers. Lower Canada, Nova Scotia and New Brunswick naturally bore the chief burden though Upper Canada, more remote and especially in need of labour, did not always agree with the protest of the lower provinces.

During the season of immigration the threat of smallpox, typhus, cholera and other diseases hung continually over Canadian ports. Demands for regulation gained special force with the repeal of the Passenger Vessels Act in 1827. It was soon evident that the ship owners were unable to govern themselves. In the summer of the year crowds of newcomers reached Halifax, Quebec and Montreal starving, diseased and dying. Disease spread and 800 of a population of 11,000 died in Halifax alone. New Brunswick fared little better. While a new Imperial Statute was passed to govern transport, Nova Scotia decided on a law of its own. An Act in 1828 provided that no passenger could be landed until the master of the vessel had entered a bond of £10 for every person who within a year became a public charge "by reason of disease, bodily infirmity, age, childhood or indigence".† Penalties were provided for evasions. Continued protests led to legislation by Nova Scotia, New Brunswick and Lower Canada a few years later, imposing a head tax on every immigrant, the funds to be used for the care of the sick and destitute coming off the ships and for forwarding them to their destinations. A need for such funds arose almost immediately when Asiatic cholera broke out in Britain and was carried with tragic results to the colonies in 1832. Thus the state of health of arriving immigrants generally and epidemics in particular clearly showed the necessity of quarantine and hospital quarters as being inseparable from immigration. Makeshift hospitals and pest-houses were established and the temporary facilities of 1831 at Grosse Île below Quebec were made permanent and were not superseded until about seventy years later. Despite various legislation passed by the British Government there was little improvement. It was undoubtedly the Irish who suffered most. In 1847 out of 90,000 immigrants embarking for Canada in British vessels, 15,000 died on the way.

* Norman Macdonald, *Canada 1763-1841* (New York, 1939), p. 24.

† J. S. Martell, *Immigration to and Emigration from Nova Scotia 1815-1838* (Halifax, N.S., 1942), pp. 22-23.

The period before 1850 also marked the beginning of an immigration service. In 1827 the Colonial Office appointed a Chief Agent at Quebec. A description of his duties and activities gives the substance of certain activities and services rendered directly and indirectly today by officers of the Department of Citizenship and Immigration. The agent was "to receive emigrants on landing, give out landing money, if any, clothe and feed the starving, hear complaints and bring proceedings against defaulting shipmasters, keep in touch with those needing employment, help the newcomers to find their friends and tranship them to their destination, and have all carefully recorded. He exceeded his official duties by compiling valuable information regarding available locations, state of roads, distances and expenses. He invited land owners to register their saleable property with him. His office became an indispensable clearing house for distressed and anxious strangers, and saved them from being exposed to the gross misrepresentations of land jobbers"* The agent also instituted information bureaux along the routes to the West to advise intending colonists and to afford shelter to the sick while travelling. Pamphlets on settlement were also published.

Until 1869 the head tax authorized in 1831 and the provisions for quarantine remained the main protective measures. The amount of the tax varied frequently but the principle was retained and appears in the Immigration Act of 1869.

At Confederation in 1867 the Federal Government assumed responsibility for the inspection and quarantine establishments of the provinces, for immigration agents and other measures developed up to that time.

THE PROTECTION OF IMMIGRANTS

While the amelioration of transport conditions was necessarily a matter for the great shipping nations, Canadian immigration legislation has always embodied provisions against some major abuses, which British and American legislation also aimed to control. As early as 1802-3 a British Parliamentary Committee sat to inquire into the transport trade and showed the need for immediate legislation. The Passenger Vessels Act of 1803 (43 Geo. III, c. 56) initiated a struggle with the ship owners and diverse other interests which was to last more than half a century and left conditions little better than they had been in the beginning. The abuses which successive inquiries revealed and successive Acts attempted to control became once more the concern of a Royal Commission in 1851. It was found that, along with the deadly overcrowding of ships, the emigrant had become a general object of exploitation. At the point of embarkation he was set upon by 'crimps', a sort of specialist in defrauding emigrants and familiar with every device for extorting money. Tickets were sold for non-existent ships or such as had sailed already. Emigrants were sold useless gear or passage tickets at exorbitant prices. Crimps offered also to change their money, 'dollaring' their victims, or enticed them to confederate boarding houses where more of their funds would be taken from them and where they were sometimes directly robbed. At sea exploitation continued. Rations were doctored or were insufficient in quantity, money was extorted for necessities, uncooked food supplied to exact money for use of cooking fires; in addition, bullying and physical maltreatment were not uncommon. Few dared to complain and the law was slow. Often ships dumped their passengers at wrong ports, hundreds of miles from their destination or on deserted beaches. On landing, the 'new world' version of crimps, porters and runners would begin the process of exploitation all over again.

While transport to Canada had not been given any special study since *Lord Durham's Report*, sufficient was known of specific abuses to make provisions for the protection of immigrants at Canadian ports. Although shipping conditions were improving as steamships superseded sailing vessels by providing a third class or steerage type of accommodation, there was a constant incentive to utilize the maximum of ship space at the expense of passenger welfare. The Immigration Act of 1869 established the number of passengers

* Norman Macdonald, *ibid*, p. 21.

a ship might carry as one adult per 12 feet of clear superficial deck available for passenger use (later changed to 15 feet) and not occupied by stores or other goods, or one person per two tons of capacity. An adult was defined as a person over 14 years of age, or two persons over one year but under 14 years. These provisions have remained standard to the present day.

No passenger was to debark until a passenger list supplied by the master of the vessel had been checked and the ship inspected by quarantine officers. The passenger list was to include the names of heads of families and the number of persons accompanying them, occupation, country of origin and destination; also the names and similar details for all single persons.

The Act also provided for payment of a head tax of \$1.00 or \$1.50 according to whether the person had left with or without the approval of the authorities at the port of embarkation. The Act provided that immigration officers might spend sums of money for food, clothing, transportation and for other assistance to intending settlers. Immigrants were permitted to remain on board ship with their baggage for 48 hours after arrival (later changed to 24 hours) until they could continue their journey or find accommodation, and their baggage was to be unloaded free of charge and at a reasonable hour of the day. Masters of vessels were required to give a detailed report of any immigrant dying *en route* to Canada and to account for the personal effects of the deceased. For the further protection of immigrants, penalties were set out for the master and crew of vessels who in their dealings with immigrants violated the laws of the country in which their home port was situated or were otherwise found guilty of a breach of the contract with their passengers. Only specially licensed persons were permitted to solicit the business of immigrants and inns and boarding houses which received immigrants were obliged to post a list of prices to be charged. A lien was not permitted on the effects of an immigrant for a debt for board and lodgings for any sum exceeding five dollars.

The measures of 1869 aiming at protection of immigrants were elaborated from time to time and new ones added, among them provisions for the protection of women immigrants aboard ship and for the control of the sale of intoxicating liquors to incoming steerage passengers.

OBLIGATIONS OF TRANSPORTATION COMPANIES

Traditionally, shipowners, shipping companies and railway companies have been among those most interested in the promotion of immigration and the recruitment of immigrants. Earlier, when the activities of the agents of such companies were uncontrolled they were not always conducive to the welfare of the immigrants or of the receiving country. Having regard for the fact that for a long time there were few effective restrictions on the movement of people and also that in more recent times, before and immediately after World War I, some companies engaged in promotion and recruitment under official arrangements, it is evident that rigid conditions and obligations should have been imposed to assure that the immigrants brought to Canada be found acceptable and in conformity with the laws, regulations and requirements. Failing this, responsibility for their return was made to devolve almost entirely upon the transportation companies who brought them.

It was only with the assumption of major responsibility for the promotion of immigration, of recruitment, selection and processing of immigrants by the Government of Canada that the liabilities of the transportation companies have been reduced.

RESTRICTIONS ON ENTRY

The Act of 1869 foreshadowed those restrictions on entry which have developed into the prohibited classes of today. It was required that the passenger list show whether the ship carried any person who was insane, idiot, deaf-mute, blind or infirm and whether accompanied by parents or relatives able to support him. If any such person were likely

to become a public charge the Collector of Customs might exact a bond of \$300 from the master of the ship to reimburse the country for any expenses on his behalf incurred during the following three years.

The most significant innovation was, perhaps, the prohibition of the landing of indigents or paupers unless the master of the ship deposited funds sufficient for the temporary assistance and travel to destination of such immigrant. This provision was not applied until 1879-80, but it contained the principle of exclusion.

Succeeding Acts and Regulations in 1886, 1902, 1905, 1906, 1907, 1908, 1909 and 1910 extended both the protective and restrictive provisions. Among the more significant developments may be mentioned the requirement of a sum of money as a condition of entry as distinct from head taxes, and in the passage in 1891 (implemented in 1900) of an Order in Council permitting the prohibition of all pauper immigration. An Act of 1905 made it a punishable offence to circulate, in a country outside Canada, false representations intended to encourage or prevent immigration into Canada. Prohibited classes were elaborated in several categories, chiefly medical, in the Act of 1906 and in the Act of 1910 and remain substantially the same today. In 1906 also the immigration of foreigners under contract to perform labour in Canada was prohibited.

RESTRICTIONS RELATING TO ASSIMILABILITY

What was probably the first Canadian expression of concern regarding the assimilability of immigrants was the protest of the Nova Scotia Assembly in 1815 addressed to the British Government against bringing in additional negroes from Bermuda. It was stated that "the proportion of Africans already in this country is productive of many inconveniences; and (that) the introduction of more must tend to the discouragement of white labourers and servants, as well as to the establishment of a separate and marked class of people, unfitted by nature to this climate, or to an association with the rest of His Majesty's Colonists".*

It may be of interest also that the first examination of immigrants on political grounds was applied not to overseas migrants but to Americans. In 1794, after the American Revolution, Commissioners were appointed and given discretionary powers to examine at the border and reject those who seemed unlikely to become loyal and suitable settlers.

When during the latter part of the 19th century the racial and ethnic composition of immigration began to change, doubts developed regarding the assimilability of certain newcomers and the economic and social consequences that might result from too drastic a change in the character of the Canadian people. Chinese immigrants arrived in British Columbia in the 1870's and from 1885 onward they were made subject to increasingly heavy head taxes until 1927 when, with the passage of the Chinese Immigration Act, they were virtually excluded. Japanese immigration began in 1896, chiefly to British Columbia, and was made subject to a series of 'gentlemen's agreements' from 1908 onward which restricted the number of such immigrants until an agreement in 1928 limited entry to 150 yearly. A few thousand East-Indians arrived during the first decade of this century and they too were made subject to head taxes. Their near exclusion was finally effected by an Order in Council under the Act of 1910 which provided that any immigrant who came to Canada otherwise than by a continuous journey from the country of which he was a native or citizen might be excluded. An Order in Council in 1919 created a general excluded class of immigrants deemed undesirable because of climatic, industrial, social, educational, labour or other conditions or requirements of Canada or deemed undesirable because of their customs, habits, modes of life and methods of holding property and their probable inability to become readily assimilated. Since 1923 the restriction on negroes has been effected by limiting the term "British subject" to Commonwealth countries with predominantly white populations. Restrictions on the entry of non-white British subjects has been a difficult problem since it was thought to involve the rights of British subjects to move freely from one part of the Commonwealth to another.

* J. S. Martell, *ibid.*

The Chinese Immigration Act was repealed in 1947 and certain other restrictions lifted. In 1951 special agreements were reached with the Commonwealth countries of India, Pakistan and Ceylon respecting the entry of their nationals. Conditions governing the admission of non-Europeans are given at pp. 172-173.

Before World War I the most important criterion of selection applied to those who did not fall into prohibited categories was their suitability as farmers. After the War, while this still remained important, selection was exercised also according to whether applicants for entry belonged to "preferred" or "non-preferred" countries. Traditional affinities with the United Kingdom and the United States naturally favoured immigrants from these countries. Citizens of France were added later to this category.* Next in order of preference came immigrants from northern and western Europe who were not too different in language and mode of life, followed by those from central and eastern Europe and by those of southern Europe including Greece, Italy, Syria and Turkey. Jews, regardless of citizenship, were treated separately.† These groupings may be compared with the currently admissible classes (p. 172).

After World War I fundamental changes were introduced also in methods of recruitment and in regulative measures. Canada took somewhat longer to recover from the War than the United States and until 1923 immigrants other than those going to assured farm work or domestic service were required to have stated sums of money. The immigration from 1923 onward was governed chiefly by two Orders in Council of Jan. 1, 1923: one established the passport and visa qualification as a condition of entry for other than British and American citizens; the other rescinded the earlier money requirement and provided that *bona fide* agriculturalists with funds, farm workers with reasonable assurance of employment, domestics, the wives and children under 18 years of age of Canadian residents and sponsored relatives might be admitted. Generally admissible, provided they had sufficient means until they could find employment, were United States citizens and British subjects within the meaning of the Act. None of these provisions applied to persons of Asiatic race.

One feature of the immigration policy of the 1920's was the promotion of British immigration under the Empire Settlement Act, which was passed by the British Parliament on May 31, 1922. Until 1931 some 130,000 persons came to Canada under various agreements under this Act though indirectly the Act also promoted unassisted immigration which by far outnumbered the assisted. Among other reasons, its relative lack of success was perhaps the fact that it aimed at land settlement at a time when Canada was becoming an industrial nation.

Under a series of agreements from 1925 onward, the recruitment and forwarding of immigrants from the "non-preferred" central, east, south and southeast European countries was given to the Canadian railways. The railways appointed Certificate Issuing Officers who examined potential immigrants at internal points and, if found suitable as agriculturalists, issued certificates to this effect with assurance of employment on arrival in Canada. Since the Government reserved the right to deny admission at the port of entry on grounds of health, morals and other provision of the Immigration Act, the railway officers also had to assure themselves regarding validity of passports of the immigrants, their literacy, physical and mental fitness and their general eligibility under the Act. The role of the Canadian railways in the promotion of immigration and in the settlement of the West has been far-reaching and outstanding.

With the onset of the world depression of the 1930's, several increasingly restrictive Orders in Council were passed. An Order of Aug. 7, 1929, prohibited the landing in Canada of any immigrant coming under contract or agreement, express or implied, to perform labour or service of any kind in Canada. This regulation, however, did not apply to farmers, farm labourers or houseworkers or to any contract labourer whose service was considered required in Canada. Then, in August 1930, immigration from Europe was

* P.C. 4186, Sept. 16, 1948 as amended by P.C. 5593, Dec. 10, 1948.

† H. F. Angus, "Need for an Immigration Policy" *The Annals of the American Academy of Political and Social Science*, Sept. 1947.

suspended except for practical farmers with sufficient capital to establish and maintain themselves on farms in Canada, and for wives and children under 18 years of age of family heads already established in this country. No change was made in the regulations applicable to immigrants from the British Isles or the United States, but solicitation of immigrants was generally discontinued.

THE IMMIGRATION ACT AND REGULATIONS

The division of powers agreed upon under the British North America Act of 1867 assigned to the Federal Government those matters which affect the country as a whole and to the provincial governments matters affecting the provinces themselves. Thus the Federal Government may pass laws respecting immigration into any or all the provinces while the provinces may pass laws affecting immigration into their jurisdictions, provided that such statutes do not conflict with the federal laws. In practice regulation of immigration has been left to the Federal Government.

The two federal statutes which at present govern immigration into Canada are the Department of Citizenship and Immigration Act (R.S.C. 1952, c. 67) and the Immigration Act (R.S.C. 1952, c. 325). The former provides that the Minister of Citizenship and Immigration through his department shall be responsible for all matters of federal jurisdiction with respect to immigration, unless any specific matter has been assigned by law to another department for administration purposes. The Immigration Act of 1952 replaces the earlier Act which had become unwieldy because of accumulated amendments. Changes were required also because of new conditions such as travel by air.

The Immigration Act sets out the terms and conditions under which any person, whether citizens, persons with domicile, immigrants or non-immigrants, may enter Canada; and, having entered, the circumstances in which persons other than citizens may be required to leave the country.

The Act accords no right to anyone to enter Canada as an immigrant. Categories of persons specifically prohibited from entering are clearly stated. The conditions under which others may be admitted are defined. While the Act provides for selection it is not primarily restrictive. Neither the Act itself nor the Regulations set any limits on the numbers which may be admitted. Similarly, the Act itself does not set numbers or quotas for any particular race, nationality or occupation. In the Regulations, however, certain preferences are indicated as to countries from which immigrants are most desirable and some entry provisions, otherwise applicable, are modified to facilitate the entry of such immigrants. This preference acts somewhat as a group test. The Regulations variously limit categories admissible from other groups of countries. Also agreements have been reached with certain Commonwealth countries whereby entry is limited to a specific number per year of their citizens, in addition to certain classes of close relatives of Canadian citizens. This has somewhat the effect of a quota.

All immigration into Canada is organized, that is, all immigrants are selected and the necessary machinery is provided for examination of immigrants abroad and for their reception on arrival.

The Act and the Regulations seek to extend certain protection to immigrants before they arrive in providing against fraudulent representations about conditions in Canada, protection *en route* and on arrival, as well as protection for those whose rejection or deportation may be considered or has been ordered.

The most important feature of the Act is its flexibility. While the Statute sets out classes prohibited from entering regardless of nationality, origin, occupation, the actual flow of immigration and classes of persons admissible are regulated under authority of Order in Council. Canada recognizes immigration as a means to an end. Changing conditions and emergencies relating to immigration may thus be met quickly by changes in regulations.

The Act is thus primarily an instrument for carrying out a policy. It follows that the policy actually stated and pursued by the government of the day is of first importance in determining the flow of immigration.

IMMIGRATION POLICY

The main outline of the policy which has been followed since the resumption of immigration after World War II was stated by the then Prime Minister, the Rt. Hon. W. L. Mackenzie King in a debate of the House of Commons on May 1, 1947. That statement in summary affirmed Canada's need for population and the intention of the government to attain a larger population through a program of immigration. Regarding long-term objectives it was stated that "apart from all else, in a world of shrinking distances and international insecurity, we cannot ignore the danger that lies in a small population holding so great a heritage as ours". Along with strategic considerations a larger population would help also to develop the country's resources and by providing a larger number of consumers would reduce the dependence on foreign trade. Respecting numbers of immigrants it was of the utmost importance to relate immigration to absorptive capacity, a factor that would vary from year to year in response to economic conditions. Regarding selection of immigrants the statement stressed that "Canada is perfectly within her rights in selecting the persons whom we regard as desirable future citizens. It is not a fundamental right of any alien to enter Canada." As to the sources of immigration: "There will, I am sure, be general agreement with the view that the people of Canada do not wish, as a result of mass immigration, to make any fundamental alteration in the character of our population. Large-scale immigration from the Orient would change the fundamental composition of the Canadian population", and "would, moreover, be certain to give rise to social and economic problems of a character that might lead to serious difficulties in the field of international relations".

IMPORTANT PROVISIONS OF THE IMMIGRATION ACT

The important provisions of the Act are now considered in greater detail. Sect. 20 to 31 of the Act provide for examination, inquiries and appeals respecting the status of immigrants under Sect. 5 of the Act which defines prohibited classes, and their status with respect to Sect. 61 of the Act and the regulations made under it which define admissible classes and conditions of entry.

Prohibited Classes.—Persons who are prohibited permanent entry include mental defectives and the mentally ill or those with a history of such illness, epileptics, persons afflicted with tuberculosis, trachoma, or any contagious diseases, immigrants who are dumb, blind or otherwise physically impaired. The entry of persons in some of these categories may be permitted if they have sufficient means of support or are taken care of by family members so as not to become public charges.

Also excluded are persons who have been convicted of any crime involving "moral turpitude" though age at conviction, time elapsed since and evidence of successful rehabilitation may be taken into consideration. Barred are prostitutes, homosexuals, pimps or, generally, persons seeking entry for immoral purposes, professional beggars and vagrants, persons who are public charges or are judged likely to become such, alcoholics, drug addicts, or persons who have trafficked in drugs, within the meaning of the Opium and Narcotic Drug Act, or are likely to do so. Prohibited entry are persons deemed likely to advocate the overthrow of the system of government by force or subversion, persons who are or have been associated with any subversive organization, spies, saboteurs, persons found guilty of high treason or conspiracy and in general persons who fail to comply with entry regulations.

Sect. 61 of the Act provides authority whereby the categories and qualifications required of persons seeking admission to Canada may be controlled. *Inter alia*, the Governor in Council may make regulations respecting medical and other examinations or tests and the prohibiting or limiting of the entry of those unable to pass them, respecting the terms and conditions of admission of persons who have received assistance to come to Canada,

respecting conditions and requirements as to passports or other documents and the possession of means of support. Furthermore, under Sect. 61 the Governor in Council is given the power to limit or prohibit the entry of immigrants for any or all of the following reasons:—

- “(g) (i) nationality, citizenship, ethnic group, occupation, class or geographical area of origin,
- (ii) peculiar customs, habits, modes of life or methods of holding property,
- (iii) unsuitability having regard to the climatic, economic, social, industrial, educational, labour, health or other conditions or requirements existing, temporarily or otherwise, in Canada or in the area or country from or through which such persons come to Canada, or
- (iv) probable inability to become readily assimilated or to assume the duties and responsibilities of Canadian citizenship within a reasonable time after their admission.”

Current Regulations.—The Immigration Regulations made pursuant to Sect. 61 of the present Act became effective June 1, 1953, by Order in Council P.C. 1953-859. As amended by P.C. 1956-785, May 24, 1956, they provide for the admission of immigrants as follows:—

- “(a) a person who is a British subject by birth or by naturalization in the United Kingdom, Australia, New Zealand, or the Union of South Africa, a citizen of Ireland, a citizen of France born or naturalized in France or in St. Pierre and Miquelon Islands, or a citizen of the United States of America if such person has sufficient means to maintain himself in Canada until he has secured employment therein;
- (b) a person who is a citizen by birth or by naturalization of Austria, Belgium, Denmark, the Federal Republic of Germany, Finland, Greece, Iceland, Italy, Luxembourg, The Netherlands, Norway, Portugal, Spain, Sweden or Switzerland or who is a refugee from a country of Europe, if such person undertakes to come to Canada for placement under the auspices of the Department or, if the Department has given its approval thereto, for establishment in a business, trade or profession or in agriculture;
- (c) a person who is a citizen by birth or by naturalization of Egypt, Israel, Lebanon, Turkey, or of any country of Europe or of a country of North America, Central America or South America if such person is the husband, wife, son, daughter, brother, sister, as well as the husband or wife and the unmarried children under 21 years of age of any such son, daughter, brother or sister, as the case may be, the father, the mother, the grandparent, the unmarried orphan nephew or niece under 21 years of age, the fiancé or fiancée, of a Canadian citizen or of a person legally admitted to Canada for permanent residence who is residing in Canada and who has applied for any such person and is in a position to receive and care for any such person; or
- (d) a person who is a citizen of a country other than a country referred to in paragraphs (a), (b) or (c) or in section 21, if such person is the husband, the wife or the unmarried child under 21 years of age, the father where he is over 65 years of age, or the mother where she is over 60 years of age, of a Canadian citizen residing in Canada who has applied for and is in a position to receive and care for any such person, but no such child shall be landed in Canada unless his father or his mother, as the case may be, is landed in Canada concurrently with him.

21. The Government of Canada having entered into an agreement with the Government of India, the Government of Pakistan and the Government of Ceylon with respect to the admission to Canada of 300*, 100 and 50 persons annually from such countries, respectively, the landing in Canada of persons from any such country is, notwithstanding section 20, limited accordingly to such numbers of persons, respectively, and in addition to the husband, the wife, or the unmarried child under 21 years of age, the father where he is over 65 years of age or the mother where she is over 60 years of age, of a Canadian citizen residing in Canada who has applied for and is in a position to receive and care for such person.”

It may be noted that any reference to Asians has been dropped. Their entry is governed under (d) above. It may be noted also that the provisions under Sect. 61 (g) of the Immigration Act quoted earlier, are no longer included in the Regulations, though it may be considered that their intent is expressed in the preferences and categories of persons admissible from different countries.

Examinations and Conditions of Entry.—Under Sect. 20 of the Act the admissibility of any immigrant is determined at the port of entry though a person may have undergone medical and civil examination by Canadian immigration officers abroad. Sect. 19 of the Regulations provides that the passing of any test or medical examination outside of Canada, or the issue of a visa or of a medical certificate, or of a letter of pre-examination has no conclusive value in actually determining admission at the port of entry.

* Effective May 6, 1957.

A system of pre-examination abroad has been in operation for many years and serves several purposes. It helps to eliminate those who are evidently unable to meet entry requirements before they embark and thus avoids the hardship that would result from rejection at the Canadian port. It makes possible more adequate selection, better regulation of the flow of immigrants in the light of seasonal and other variations in employment conditions and of course facilitates rapid processing of immigrants at Canadian ports.

The main objectives of the examinations are to determine that a person is in an admissible category with respect to his physical and mental health, his moral character, his status from the point of view of security, his employability with respect to the state of the labour market in Canada. Where a family is migrating all members must be examined at the same time, whether the head of the family precedes them or not, to avoid the risk of breaking up a family if one member were to be rejected. Winter unemployment because of the severity of the climate has long been a feature of labour conditions in Canada. The general aim, therefore, is to discourage the arrival of immigrant workers during the winter months. More recently, however, efforts have been made to bring in during this period those types of workers who are not affected by this seasonal slackening.

Sect. 18 of the Regulations provides that every person seeking to enter or land in Canada, except immigrants who are citizens of the United States, must be in possession of an unexpired passport issued by the country of which he is a subject or citizen. A travel document or a certificate of identification may be accepted for a stateless person or a refugee and for a woman who has become a British subject by marriage to a British subject domiciled in Canada. In addition, a valid and subsisting immigrant visa is required of all persons other than British subjects and citizens of France within the meaning of the Act, citizens of the United States, or persons who are legally admitted to the United States for permanent residence.

While British subjects and citizens of France within the meaning of the Act and citizens of the United States have not in the past been required to pass medical pre-examinations, though it was urged that they do so as a measure of facilitation, British subjects and citizens of France within the meaning of the Act are now required to have a prescribed medical certificate. Citizens and legal residents of the United States must now be in possession of a letter of pre-examination prescribed by the Minister.

The Immigration Act provides (Sect. 69) that the Department may make loans to immigrants to help defray the costs of transportation to Canada, from the port of entry to their destination and for their living expenses *en route*, the total outstanding amount not to exceed \$12,000,000. Such assistance, granted at first to heads of families only, has since been extended to include also family members and single persons. Loans are made on a repayment basis over a maximum period of 24 months. The record of repayment of these loans has been highly satisfactory.

The Regulations (Sect. 16) provide also that an immigrant shall not be admitted to Canada if he has received financial assistance from an organization, groups of persons or a person not accredited for this purpose by the Minister. Groups which, with official approval, have assisted immigrants since World War II include a number of church and voluntary organizations and some employers in need of workers, usually on a recoverable loan basis. However, most immigrants come without such assistance or are helped by relatives.

Rejection and Deportation.—As previously stated, immigration into Canada is not a matter of right and the Act defines two procedures of exclusion—rejection and deportation. Where a person applying for entry cannot be properly examined because of illness, the effects of alcohol, drugs or other cause, the examination may be deferred or the immigration officer may make an order for rejection. A person so rejected may, without prejudice, present himself subsequently for examination. With respect to deportation, however, unless an appeal is allowed, a person against whom a deportation order is made shall not be allowed to remain in Canada or, if deported, shall not be re-admitted without the consent of the Minister.

The causes which may lead to deportation are narrowed after a person has acquired domicile. A Canadian citizen cannot be deported. Canadian domicile is acquired by an immigrant after five years of continuous residence in Canada. Canadian domicile may be lost by voluntary permanent residence out of Canada, and may be forfeited by certain activities hostile to the State. Periods spent in a prison or in a mental hospital and periods during which a deportation proceeding is pending against a person are not counted towards the acquisition of domicile.

A person not a citizen may be deported regardless of length of residence and whether he has acquired domicile or not if he has been convicted under laws governing drug traffic, or if he is found to be a member of a subversive organization or engages in subversion by force or other means of democratic government as understood in Canada, or if he has been convicted of an offence involving disaffection or disloyalty to Her Majesty, or if he, outside of Canada, has engaged in activities detrimental to the security of Canada. Persons, who have not yet acquired domicile are liable to deportation if they fall into prohibited classes at the time of entry or within five years after having been landed, if they have engaged in commercialized vice, have been convicted under the criminal code, or have become inmates of prisons or mental institutions or persons who have gained entry by means of fraudulent documents or similar means.

Appeals are permitted in certain cases where deportation has been ordered.

STATUS OF IMMIGRANTS

Except for the right to vote in national elections, deferred until citizenship is acquired and for the liability to deportation referred to earlier, there are very few restrictions pertaining to the status of immigrants.

While immigrants in general are free to engage in any kind of work, there are some legal restrictions relating to employment in the Public Service of Canada and there may be others relating to work involving national security considerations. Immigrants who have received an assisted passage loan may be required to sign an undertaking to work for one year in a given type of job. This undertaking is between the immigrant and the government rather than between the immigrant and the employer.

Other restrictions, if any, are generally of a private nature and most often relate to a language handicap or to seniority systems in operation in a plant or factory. Recognition of immigrant professional persons by the governing bodies of Canadian professions has frequently been a matter of discussion and is too complex to be dealt with in detail here. Such recognition is often more easily secured by immigrants from the British Isles and from the United States than by persons from elsewhere, partly because of similarity of professional standards and practices and of language. Recognition is generally a matter to be settled between the individual immigrant professional and the relevant governing body of the profession.

Immigrants do not require any special work permit nor do they require any official identification cards, need not register with the police and in all respects have complete freedom of movement in the same way as Canadian citizens and are free to settle anywhere in Canada. Similarly no exit permits or any other official permission is required if an immigrant should decide to leave Canada permanently. Immigrants enjoy full legal rights and protection under the civil and criminal laws of Canada and the provinces. They may own or dispose of property, are protected and governed by laws applying to conditions of work, such as hours of work and minimum wages, and in general have the same rights, privileges and obligations as any other Canadian.

CITIZENSHIP

After four years and nine months of residence following landing, an immigrant may make application for Canadian citizenship which is usually granted if he possesses the required qualifications.

PLACEMENT OF IMMIGRANT WORKERS

The Immigration Branch, through its field services and with special reference to immigrants, maintains a continual survey of economic opportunities. This in conjunction with the information gained by the Department of Labour makes for fairly complete coverage of conditions throughout Canada relating to absorption of immigrants. Such information is forwarded to immigration officers abroad to guide them in the selection of applicants and in the regulation of the flow of admissions.

As additions to the labour force, immigrants are usually selected because there is demand for workers in the occupations they are able to fill. Selection, therefore, is not on a 'one job—one man' basis, except in special cases, and the immigrant worker is free to compete with others in the Canadian labour market. The facilities of the National Employment Service are equally available to immigrants and citizens.

The Settlement Service of the Immigration Branch is of particular interest to persons who aim to be self-employed. Immigrants, equally with Canadians, are free to engage in any type of business. They are subject only to the ordinary regulations and restrictions which govern the operation of any enterprise in Canada. Settlement Service officers located in all districts across Canada offer a wide range of assistance advising newcomers in matters such as the purchase of properties, financing and evaluating prospects of success.

ASSISTANCE AND INTEGRATION

One aim of successful integration is to equalize the position of immigrants with that of Canadian citizens. Satisfactory occupational placement to this end is essential. Newcomers being strangers in the country, however, will often require additional assistance and direction.

At the main Canadian ports immigration officers, railway officials, representatives of churches and volunteer groups and societies, and sometimes consular representatives of the immigrant's homelands are present to direct and guide newcomers to their destinations, assist families, help in locating relatives, shelter and jobs and generally give counsel and information. In nine cities the Immigration Department maintains halls for stopover purposes where immigrants may wait for travel or other arrangements to be made. In nearly every community where there are many newcomers, night classes in language and citizenship are conducted, organized usually under the provincial departments of education with the Government of Canada sharing the costs. Those isolated on farms or in the bush may take such courses by correspondence. Voluntary organizations assist the newcomers to become part of the social life of the community.

Having regard for possible hazards of settling in a new environment which immigrants may have to face, the Government of Canada, under a series of agreements with most provinces, shares on an equal basis for a period of twelve months the cost of medical care, hospitalization, temporary welfare and rehabilitation assistance for immigrants who have become destitute through no fault of their own, but do not have the required residence qualifications to benefit from the services normally applied to indigents by provincial and municipal governments. Moreover, the Department of Citizenship and Immigration is also empowered to provide financial and other emergency assistance under the same circumstances. Regulations have been relaxed so that immigrants receiving such assistance are not subject to deportation "on the sole ground of indigency". The Department may also provide emergency assistance, financial and other, to immigrants who within twelve months after landing and through no fault of their own, have become destitute because of unemployment or other misfortune.

Newcomers, regardless of citizenship, share alike with Canadians the benefits of all general social assistance measures in effect in Canada, though most of these involve a residence requirement. The three-year residence requirement originally contained in the Family Allowance Act (*see* Index) was reduced in 1948 to one year to assist more readily immigrant families. It was not considered practicable to reduce the residence requirement

further but in April 1956 the Department of Citizenship and Immigration undertook as an alternative measure to provide assistance to immigrant families during their first year in Canada at the rate of \$60 a year for each child under 16 years of age not born in Canada. Unemployment insurance under the Unemployment Insurance Act of 1941 (*see Index*) provides cash payment to natives and immigrants alike if they have fulfilled the conditions of the Act. Old Age Security and Old Age Assistance (*see Index*) both require twenty years of residence in the country, which may affect especially dependent parents who may have come to Canada on the sponsorship of their adult children. A ten-year residence requirement applies in the case of Pensions for the Blind (*see Index*) and Disabled Persons Allowances (*see Index*) though such persons are eligible from age 18 on. Conditions for the payment of Workmen's Compensation are the same for immigrants and citizens.

This article has attempted to review selected aspects of Canadian immigration development and to place in perspective the changing immigration and conditions of immigration into Canada since the early days of colonization. It is planned to deal with complementary aspects and with immigration in its social character in subsequent editions of the Year Book.

Section 1.—Immigration Statistics

The numbers of immigrant arrivals in Canada year by year from 1912 to 1956 are shown in Table 1. Tables 2 to 8 provide statistical analyses of the content of the immigration movement in recent years. The numbers of persons refused admission at ports of entry and those deported from Canada during 1952 to 1956 are given in Table 9.

During the period 1912 to 1956, 4,217,838 immigrants were admitted to Canada. The annual influx ranged from a high of 400,870 in 1913 to a low of 7,576 in 1942, the average yearly intake for the period being 95,860. The total number of immigrant arrivals in the postwar period 1946 to 1956 was 1,387,176, representing an average of 126,107 a year.

1.—Immigrant Arrivals 1912-56

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153 and for 1894-1911 in the 1948-49 edition, p. 175.

Year	Arrivals	Year	Arrivals	Year	Arrivals	Year	Arrivals	Year	Arrivals

IMMIGRANT ADMISSIONS BY COUNTRY OF LAST PERMANENT RESIDENCE 1956

Sex, Age and Marital Status.—In the ten-year period 1947 to 1956 adult males comprised 42.2 p.c. of the immigrant arrivals, adult females 33.3 p.c. and children under 18 years of age the remaining 24.5 p.c. Without relation to age, 54.3 p.c. of the newcomers were males.

3.—Sex Distribution of Immigrants as Adult Males, Adult Females and Children, 1947-56

NOTE.—Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Year	Adult Males	Adult Females	Under 18 Years		Total
			Males	Females	
	No.	No.	No.	No.	No.
1947.....	27,281	24,787	6,154	5,905	64,127

1949.....	39,044	32,957	12,118	11,098	95,217
1950.....	30,700	24,172	10,287	8,753	73,912
1951.....	95,818	53,239	24,348	20,986	194,391
1952.....	66,083	53,443	23,766	21,206	164,498
1953.....	68,269	56,425	23,153	21,021	168,868
1954.....	64,551	51,690	19,980	18,006	154,227
1955.....	42,425	40,120	14,403	12,998	109,946
1956.....	67,880	55,574	21,661	19,742	164,857

In 1956, 78.9 p.c. of the males and 77.0 p.c. of the females arriving were 15 years of age or over as compared with 78.3 p.c. and 78.7 p.c., respectively in 1955. Of those arriving in 1956 who were 15 years of age or over, 51.8 p.c. were married, 44.0 p.c. were single and 4.1 p.c. were widowed or divorced. The total number of single males exceeded the number of single females by 18,317 but there were more females than males in the married, widowed and divorced categories. In the single class, males were 49.1 p.c. more numerous than females, the numerical superiority being particularly heavy in the age group 15 to 29.

4.—Sex and Marital Status of Immigrant Arrivals by Age Group 1955 and 1956

Birthplace, Nationality and Origin.—Of the immigrant arrivals in 1956, 33.5 p.c. were born in Commonwealth countries or in Ireland. This percentage compares with 30.3 p.c. in 1955, 31.2 p.c. in 1954, 29.9 p.c. in 1953 and 28.2 p.c. in 1952. In 1956, 36.4 p.c. of the newcomers were born in Germany, Italy or the Netherlands, 4.9 p.c. were born in the United States and 25.2 p.c. in other countries.

Immigrants of continental European origin comprised 63.1 p.c. of the influx during 1956, those of British origin 34.3 p.c. and of other origins 2.6 p.c. These percentages remained fairly constant during the three years 1954 to 1956.

7.—Origins of Immigrant Arrivals 1954-56

NOTE.—Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

¹ Includes a few minor groups.
such as German, French, Italian, etc.

² Reported as Swiss origin but evidently one of the constituent races

Destination and Occupation.—Approximately 55 p.c. of the immigrants admitted to Canada in 1956 declared that they were destined to occupations in the labour force. The other 45 p.c. were wives, children, other dependants and retired persons. Of the workers, 11.4 p.c. were classed as professional and managerial, 8.2 p.c. were entering agricultural occupations, 15.2 p.c. were in service occupations, 32.1 p.c. were in manufacturing, mechanical and construction trades, and 13.7 p.c. were general labourers. Almost half of the gainfully occupied female immigrants were in service occupations.

Ontario absorbed 55.0 p.c. of the arrivals in 1956, Quebec 19.0 p.c., British Columbia and the Prairie Provinces 21.8 p.c. and the Atlantic Provinces 1.8 p.c. Destinations of 2.4 p.c. were not specified.

INTENDED DESTINATIONS AND OCCUPATIONS OF IMMIGRANTS ADMITTED TO CANADA, 1956

Deportations.—Persons unable to meet the requirements of the Immigration Act and Regulations may be refused admission to Canada upon applying at ports of entry. Certain classes not considered suited to the Canadian way of life may be deported (*see* pp. 170-176).

9.—Refusals and Deportations by Cause and Nationality 1954-56

NOTE.—Figures from 1903 are given in the corresponding table of previous Year Books.

Returning Canadians.—The number of Canadians who returned to Canada during the years 1950 to 1956 after having resided in the United States were as follows: 1950, 3,518; 1951, 3,635; 1952, 4,707; 1953, 4,606; 1954, 4,516; 1955, 3,942; and 1956, 4,740.

Section 2.—Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent both present and past immigration activities. The movement to the United States of native-born Canadians as well as of Europeans who originally migrated to Canada attained considerable proportions at certain periods. The figures of Table 10, showing the numbers of persons entering the United States from Canada during the years 1947-56 were obtained from the Immigration and Naturalization Service of the United States Department of Justice. No Canadian statistics on emigration are available.

PART II.—CANADIAN CITIZENSHIP*

Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155.

Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and provide an underlying community of status for all the people of Canada. Since Jan. 18, 1950, the administration of Canadian citizenship has been the responsibility of the Department of Citizenship and Immigration. The provisions of the Act and its several amendments are outlined in some detail in the 1955 Year Book, pp. 177-181. More briefly, they are given in the following paragraphs.

Natural-Born Canadian Citizens, Born before Jan. 1, 1947.—The Act defines the two categories of natural-born Canadian citizens as (1) a person born in Canada or on a Canadian ship or aircraft; (2) a person born outside of Canada before Jan. 1, 1947, if the responsible parent (the father or, where the father is deceased or where the child is born out of wedlock, the mother) is a Canadian citizen, if he was, on Jan. 1, 1947, either a minor or had, prior to that date, been lawfully admitted to Canada for permanent residence and had not, before that date, acquired the citizenship or nationality of another country.

The Act provides that a person in the second category will cease to be a Canadian citizen on attaining the age of 24 years or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

Natural-Born Canadian Citizens, Born after Dec. 31, 1946.—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

The person who becomes a Canadian citizen in such manner automatically ceases to be a Canadian citizen on reaching the age of 24 years unless he complies with the requirements as set out for a person born outside of Canada before Jan. 1, 1947, who was still a minor on that date.

Canadian Citizens other than Natural Born.—Before the 1953 amendments to the Citizenship Act the only persons who acquired Canadian citizenship on Jan. 1, 1947, through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947, whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947, need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

Status of Married Women.—Since the commencement of the Canadian Citizenship Act a Canadian woman does not lose Canadian citizenship upon marriage to a non-Canadian and a non-Canadian woman does not become a Canadian citizen upon marriage to a Canadian citizen. However, a Canadian woman who marries a non-Canadian whose country of allegiance considers her to have acquired its nationality upon marriage may file a Declaration of Renunciation of Canadian citizenship if she wishes to divest herself of her Canadian citizenship. A non-Canadian woman who marries a Canadian citizen must apply to the court for a certificate of citizenship. If she is a citizen of another

* Prepared in the Canadian Citizenship Branch under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration, Ottawa.

Commonwealth country she may apply direct to the Minister. The one concession as to the qualifications applicable in both instances is a residence of only one year in Canada rather than the prescribed five years of Canadian domicile.

A Canadian woman who married a non-Canadian prior to Jan. 1, 1947, and ceased to be a British subject may regain her status and be readmitted to Canadian citizenship upon application therefor, whether or not she is a resident of Canada.

Status of Minor Children.—The minor child of a Canadian citizen other than a natural-born Canadian may receive a certificate of Canadian citizenship upon application therefor by his or her responsible parent, the *de facto* guardian, or the mother if she has custody of the child. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances, e.g., to a child whose responsible parent is not a Canadian citizen but who has been admitted to Canada for permanent residence. Provision is made for the granting of a certificate to a person who has been adopted or legitimized and who has been admitted to Canada for permanent residence, if the adopter or the legally recognized father is a Canadian citizen.

Loss of Canadian Citizenship.—Canadian citizenship may be lost as follows:—

- (1) A Canadian citizen who when outside of Canada and not under disability (minor, lunatic or idiot) acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if that country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.
- (3) A Canadian citizen, other than natural born or one who has served in the Armed Forces of Canada in time of war, or other related circumstances, who resides outside of Canada for ten consecutive years without maintaining substantial connection with Canada, loses his citizenship automatically, but the period of absence may upon application be extended beyond the ten years for good and sufficient cause.

Loss of Citizenship by Revocation—Applicable Only to Naturalized Persons.—The citizenship of a Canadian citizen other than a natural-born Canadian citizen may be revoked by the Governor in Council for such reasons as trading or communicating with an enemy country during time of war; disaffection or disloyalty while out of Canada or conviction by a court of competent jurisdiction of any offence involving disaffection or disloyalty while in Canada; obtaining a certificate of naturalization or Canadian citizenship by false representation or fraud; residence outside of Canada for not less than six years (without maintenance of substantial connection) since becoming a Canadian citizen or being naturalized in Canada; residence for not less than two years (without maintenance of substantial connection) in a foreign country of which he was a national or citizen at any time prior to his becoming a Canadian citizen or being naturalized in Canada.

Loss of Citizenship by Revocation—Applicable to Both Natural-Born and Naturalized Persons.—The Governor in Council may in his discretion order that any person shall cease to be a Canadian citizen if, upon a report from the Minister of Citizenship and Immigration, he is satisfied that such person has, when not under a disability (1) acquired voluntarily the citizenship of a foreign country (other than by marriage), (2) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (3) made a declaration renouncing his Canadian citizenship.

Section 2.—Canadian Citizenship Statistics

Results of the 1951 Census show that 96.9 p.c. of the people of Canada were Canadian citizens; that 0.7 p.c. were citizens of other Commonwealth countries; 1.7 p.c. of European countries; 0.1 p.c. of Asiatic countries; 0.5 p.c. of the United States; and 0.1 p.c. of other countries. Table 1, classifying the 1951 population by country of allegiance and origin,

shows that 98.0 p.c. of the persons of British Isles origins and 99.7 p.c. of those of French origin owed allegiance to Canada. Corresponding percentages for other European and Asiatic origins were 89.3 p.c. and 78.7 p.c., respectively.

Citizenship Certificates Issued.—In 1956, 79,971 Canadian Citizenship Certificates were issued as compared with 73,378 in 1955. During 1956 the Canadian Citizenship Registration Branch recorded 3,868 certificates of registration of births abroad, 1,176 declarations of intention, 116 declarations of retention of Canadian citizenship, and one petition for resumption of Canadian citizenship. Certificates issued free to persons who had had active military service numbered 201. Corresponding figures for 1955 were 4,128 registrations of births abroad, 1,840 declarations of intention, 92 declarations of retention of Canadian citizenship, 12 petitions for resumption, and 144 certificates issued free to persons who had had active military service.

Characteristics of Persons Granted Citizenship Certificates in 1956.—Comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available since 1953; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality.

Of the total of 55,404 persons granted citizenship in 1956 only 2 p.c. had immigrated to Canada before 1921, 5 p.c. from 1921 to 1940, 64 p.c. in the period 1941 to 1950 and 29 p.c. since 1950. Regionally these new citizens were distributed as follows: 1.0 p.c. in the Atlantic Provinces, 17.2 p.c. in Quebec, 60.1 p.c. in Ontario, 12.5 p.c. in the Prairie Provinces and 8.9 p.c. in British Columbia. Just over 84 p.c. of them resided in urban centres as compared with 62 p.c. of the total population of Canada at the time of the 1951 Census.

Almost 60 p.c. of the persons naturalized during 1956 were males. Young persons under 20 years of age constituted 13 p.c. of the total, persons 20 to 44 accounted for 63 p.c., those 45 to 64 for 22 p.c. and those 65 or over for 2 p.c. Over 13 p.c. of those naturalized in 1956 formerly had been citizens of Poland. Italy had been the country of allegiance for 11 p.c., Commonwealth countries for 10 p.c. and the Netherlands for 8 p.c. Of the 8,181 who reported themselves as stateless when applying for Canadian citizenship, more than half had been born within the present boundaries of the U.S.S.R.—about 15 p.c. in Poland and 7 p.c. in each of Czechoslovakia, Hungary and Yugoslavia.

Of all the males granted citizenship certificates in 1956, 25 p.c. were employed in manufacturing and mechanical occupations, 12 p.c. were labourers in other than primary industries, 10 p.c. were employed in construction, 8 p.c. in professional occupations, 7 p.c. in service, 6 p.c. in agriculture and 5 p.c. in proprietary and managerial occupations. Of all the females granted certificates, 56 p.c. were homemakers. Among those employed outside the home, 9 p.c. were in manufacturing and mechanical occupations, 7 p.c. in clerical jobs and 6 p.c. in service occupations.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Vital Statistics provide a record of community and national development—a measurement of the pace of population growth, the number and distribution of people coming into the various age groups, the relative importance of each of the various causes of death, and population trends generally. This Chapter, moreover, attempts to provide a comparison of principal Canadian vital statistics rates with those of other countries and to present tables on marriages and deaths as well as detailed life tables for males and females. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The continuity of vital statistics provides a constant guide to the planning, operation and evaluation of a variety of national activities, notably in public health, education, community planning, and various types of business enterprise. The data are presented so as to be useful for the general reader as well as for students of demography, public health, sociology and other specialized fields. The population data upon which the rates shown in this Chapter are computed are contained in Chapter III (Population) and in the several DBS reports relating to census and intercensal estimates of population. In making both international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between different countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, changes in the rates may be caused partly by changes in this distribution.

The history of the collection of vital statistics in Canada is covered in the 1948-49 edition of the Year Book, pp. 185-188. In addition to the information provided in *Vital Statistics* (Preliminary Report), *Vital Statistics of Canada* and other regular DBS annual reports, certain unpublished data are also available on request.

Data for the Yukon and Northwest Territories, previously shown separately and not included in the national totals, are now included in all tables unless otherwise specified.

Section 1.—Summary of Vital Statistics

Table 1 gives a summary of the principal vital statistics of the provinces of Canada from 1921 when the system of collection of national statistics was initiated and Table 2 shows certain vital statistics for urban centres having at least 10,000 population at the date of the 1951 Census.

* Revised in the Vital Statistics Section, Health and Welfare Division Dominion Bureau of Statistics.

¹ As at the 1951 Census.² Per 1,000 population.³ Per 1,000 live births.

Section 2.—Births*

The Canadian birth rate in 1921 was 29 per 1,000 population. As a rate of 35 is very high for countries of modern western civilization, the Canadian rate had probably not fallen far, nor for long, before 1921. It fell continuously until 1937 when it reached a low of 20, but as a result of economic recovery and the War, it rose to 22 in 1940, 24 in 1943 and a record high of 28.9 in 1947. Since then the rate has fluctuated moderately between just over 27 in 1950 and 1951 and 28.5 in 1954. The 1956 figure was 28.0.

The birth rates in most provinces followed similar trends but there were some regional differences in the birth rate pattern in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during 1951-55 than those for the 1946-50 period, while those for Quebec and the Maritimes were lower. In fact, Ontario, British Columbia and Alberta had all-time record high crude birth rates during the three years 1954 to 1956.

It has always been assumed that the Province of Quebec has had the highest birth rate in Canada, but Table 1 shows that since the late 1930's or early 1940's Newfoundland and New Brunswick have had higher births rates than Quebec. In 1956, Newfoundland had a crude rate of 35.0, followed by Alberta with a rate of 31.1, New Brunswick 29.9 and Quebec 29.4; Manitoba and British Columbia had the lowest rates with 25.8 and 25.9 respectively. However these crude rates are based on total population and therefore do not reflect the fertility of the women who are of reproductive age in the different provinces. A more accurate measure of fertility is the rate based on the number of married women in the population in the reproductive age group, 15 to 49. The following figures, based on the 1956 Census and births in 1956 give the birth rates per 1,000 married women in the age group 15 to 49 by province:—

Newfoundland.....	242	Ontario.....	146	Yukon.....	199
Prince Edward Island....	186	Manitoba.....	148	N.W.T.....	261
Nova Scotia.....	167	Saskatchewan.....	163		
New Brunswick.....	197	Alberta.....	172	CANADA.....	164
Quebec.....	188	British Columbia.....	141		

On this basis if we exclude the Yukon and Northwest Territories†, Newfoundland still had the highest fertility rate followed by New Brunswick and Quebec, and British Columbia had the lowest.

Also, contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1956, 143,516 babies were born to Ontario mothers as compared with 135,884 to Quebec mothers. A record total of 450,739 were born to Canadian mothers in 1956, 7,802 more than in the previous year.

Sex of Live Births.—Wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much of an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada in 1941-54 varied between 1,052 and 1,067. In 1956 there were 1,058 males born for every 1,000 females. Variations in the provincial sex ratios result from chance variation because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year.

* For international comparisons see Section 7, pp. 230-231.

† Most of the population of these areas, particularly the Northwest Territories, is made up of Indians and Eskimos whose fertility rate is considerably higher than that of white women.

¹ Excludes Newfoundland and the Yukon and Northwest Territories.

Hospitalized Births.—In 1956 over 88 p.c. of all Canadian births occurred in hospital. Although the proportions of hospitalized births have increased steadily since 1921 in all provinces these proportions still vary widely. The existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others—particularly in remote rural areas—and preference for home delivery in some local areas are among the factors accounting for provincial variations in this respect. The noticeable increases in hospitalized births within recent years in those provinces that previously had the lowest proportion may be partly the result of increased hospital services and facilities being provided in those areas.

Births in Urban Centres.—Table 2, pp. 199-200, shows the number of births in 1956, regardless of where they occurred, to mothers residing in urban centres of 10,000 population or over. Because of the much greater proportion of young married couples in these areas, the crude birth rates are, on the whole, much higher than in other areas.

Illegitimacy.*—In 1956 less than 4 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world. In the five-year period 1926-30 it was 3 p.c., whereas the average of the years 1951-55 was 3.8 p.c.

¹ Figures for Newfoundland are included for 1949-56 only; and for the Yukon and Northwest Territories for 1951-56 only.

Stillbirths†—The rate of stillbirths has been falling since 1926 though not equally in all provinces. The rate of stillbirths among unmarried mothers has always been considerably higher than that for married mothers and consequently higher than the over-all rate but this difference has been disappearing in recent years.

* The term "illegitimate", for statistical purposes, does not refer to births conceived out of wedlock but those in which parents reported themselves as not having been married to each other at the time of the birth or the registration of the birth.

† A stillbirth is defined as the birth of a foetus after at least 28 weeks pregnancy which, after complete separation from the mother, does not show any sign of life.

¹ Exclusive of Newfoundland.² Figures for Newfoundland are included for 1949-56 only and for the Yukon and Northwest Territories for 1951-56 only.

Multiple Births.—Approximately one confinement in 85 in Canada results in the birth of more than one child. The proportion of stillbirths is higher among multiple than among single births. It is about twice as high for twins and between three and five times as high for triplets.

¹ Excludes the Yukon and Northwest Territories.

Fertility Rates.—Sex and age distribution of the population is an important factor in determining birth, death and marriage rates. More than 95 p.c. of children born are to women between the ages of 15 and 50, so that, as noted earlier, variations in the proportion of women of these ages to the population as a whole will cause variations in the crude birth rates of different countries or regions even though the fertility of women at each age may be the same. Measures of fertility which are independent of the sex and age distribution of the population have therefore been devised. The best known of these are age-specific fertility rates and reproduction rates.

Ages of Parents.—Ages of the parents is an important variable in any analysis of birth statistics. The numerical and percentage distribution of legitimate live births by the age group of the parents is given for 1955 and 1956 in Table 8, of illegitimate live births by the age group of the mother in Table 9, and of stillbirths by the age group of the mother in Table 10, as well as the average ages of the parents for each year shown.

About 6 p.c. of the legitimate children born each year are born to mothers under 20 years of age, in about one-third of the births the mother is under 25 years, and in almost two-thirds, under 30 years; in 45 p.c. of all births the father is under 30 years of age. On the other hand one-third of the illegitimate infants born are born to mothers under 20, and an additional one-third to mothers under 25 years of age.

Table 10 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. The stillbirth rate is almost three times as high among mothers 40-44 and about six times as high among those of 45-49 years as it is for mothers under 30. Further, most of the reduction in stillbirths in recent years has been among young mothers.

Order of Birth.—Table 11 shows the order of birth of all live-born infants in 1955 and 1956 according to the age of the mother. As would be expected 23,315, or three out of every four, of the 30,975 infants born to mothers under 20 years of age were a first child, whereas almost six out of every ten of the children born to mothers of 20-24 years were a second or later child. This is a reflection of the earlier marriages and heavy fertility of recent years.

Table 12 summarizes the pattern of family formation since 1927. The results of the immediate postwar 'baby boom' are obvious—57.9 p.c. of the infants born in 1947 was a first or second child while 50.5 p.c. of the 1956 baby crop was a third or fourth child.

Section 3.—Deaths*

Since 1931 the Canadian death rate has fluctuated between 10.3 and 8.2 per 1,000 of the population, declining in recent years to a record low of 8.2 in 1954 through 1956. Table 1, pp. 196-198, shows that this decline has been apparent in varying degrees in all provinces. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is the result of the high proportion of people in the older age groups.

Subsection 1.—General Mortality

Sex and Age Distribution of Deaths.—Despite reductions in infant mortality over the past 25 or 30 years, more deaths still occur in the first year of life than in any other single year. Of the 107,000 deaths occurring in 1926, 31,000 or almost 30 p.c. were of children under five years of age and three-quarters of those were of children under one year of age. Of approximately 132,000 deaths in 1956, close to 17,000 or nearly 13 p.c. were of children under five years of age and over 85 p.c. of those were under one year. Most of the reduction took place among children over the age of one month but there was a notable decrease in all childhood ages up to five years.

Tremendous reductions have taken place in the mortality pattern since the early 1920's, with the most important reductions in the childhood and early adult ages. In 1931 over 19 p.c. of all male deaths were of persons five to 45 years of age; in 1956 these accounted for less than 11 p.c. of total deaths. The reduction in mortality among females in this age group is equally remarkable, the proportion dropping from almost 22 p.c. to approximately 8 p.c. Death rates for males up to age 45 have been roughly halved during the past 25 years; those for females in the same ages have been reduced as much as three to four times.

These reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and of raising the average age of the population as a whole. As a consequence much larger proportions of deaths are now occurring at the older ages and have raised the average age at death. In 1921 the average age at death of males was 39.0 years and of females 41.1 years; by 1956 this had advanced to 58.0 and 60.6 respectively. These trends are indicated clearly in Table 13.

* For international comparisons, see Section 7, pp. 230-231.

Deaths in Urban Centres.—For convenient reference Table 2, pp. 199-200 shows the number of deaths and death rates in 1956 for urban centres of 10,000 population or over. Without a knowledge of the age composition of each centre it is difficult to compare rates for various centres. The migration of young people from rural areas to some urban centres and of older people to other centres creates a favourable situation for a low or high rate as the case may be. Despite differences in the age factor, some urban areas have very low death rates compared with other centres of the same size and with other areas in the same province.

Causes of Death.—Table 14 shows the deaths in Canada grouped according to the International Abbreviated List of 50 Causes. About 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases—tuberculosis, pneumonia and influenza—and nephritis.

The rise in the average age at death has already been noted (p. 210). Causes of death that mainly affect children and young adults have declined. Diphtheria for example has been almost wiped out and tuberculosis has been greatly reduced. On the other hand the aging of the population increases the proportion of deaths from certain causes that affect older people. Thus cancer and diseases of the cardio-vascular-renal systems now account for a substantially larger proportion of all deaths than formerly.

These trends indicate the remarkable success that has attended the attack by health authorities on the infective and contagious diseases which in the past have constituted such a great hazard in the early and young adult years of life. They have similarly served to emphasize the emergence of the chronic and degenerative conditions of later life as the targets towards which the public health programs of the future will be directed. In effect, Canada has shared the experience of most western nations in exchanging a high mortality in younger life for high morbidity in older age groups.

The Chart on p. 213 shows death rates for the major cause groups from 1931-56.

Subsection 2.—Infant Mortality

Table 1, pp. 196-198, shows the striking improvement that has taken place in the rate of infant mortality during the past 35 years. Although 42,000 of the 1,330,000 children born in the years 1954-56 died, 81,700 others lived to their first birthday who *would have* died at the rate prevailing in the period 1926-30.

As illustrated in Table 15, mortality among male infants is 25 to 30 p.c. higher than that among females for Canada as a whole, with wider variations for the individual provinces. As pointed out earlier there were in the 1941-54 period between 1,052 and 1,067 males born to every 1,000 females born, but because male infant mortality is higher the excess of males is reduced drastically by the end of the first year. For example, in 1954-56 there were 683,247 male children born compared with 646,627 female children, an excess

MAJOR CAUSES OF DEATH

of 36,620 or 5.6 p.c.; during this period 24,099 male children died during their first year compared with 18,118 female children, that is, 5,981 more. The excess of males at one year of age was thus reduced to 30,639 or 4.9 p.c.

As indicated in Tables 1 and 15 infant mortality rates vary considerably from province to province and from one locality to another. One of the principal causes of these variations appears to be the different proportions of births that take place in hospital or under proper medical care (*see also p. 202*). Along with increased hospitalization has come better and more widespread prenatal and postnatal care. Many other factors have also been important, particularly the supervision of water supplies, improved sanitation, the pasteurization of milk, the use of antibiotics, more and better pædiatric services, improved obstetrical and hospital nursing room services, improved home environment because of generally improved living standards and, in recent years, the lower age of mothers.

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 199-200, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

Causes of Infant Deaths.—Of the 14,399 infant deaths in 1956 a congenital malformation was the underlying cause of death in 2,310 cases, immaturity in 2,224, pneumonia among infants over four weeks of age 1,600, postnatal asphyxia and atelectasis 1,642, and injury at birth 1,548; these causes together made up almost 65 p.c. of the total. The Chart opposite shows the relative importance of the major causes of infant deaths from 1931-56, and the Chart on p. 214 shows the comparative numbers of children dying at each month of age during the first year of life.

LEADING CAUSES OF INFANT DEATHS

RATE PER 100,000
LIVE BIRTHS

RATE PER 100,000
LIVE BIRTHS

Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 196-198, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades. Although the number of births has been much greater in recent years, the number of maternal deaths has declined steadily since about 1930 (when there were 1,215 deaths and a rate of almost five deaths for every 1,000 live births) to a record low of 278 in 1956. Since 1945 the rate of maternal mortality has dropped below two per 1,000 live births and has been under one per 1,000 live births since 1951. Mortality among unmarried mothers is higher than among married mothers.

Age at Death.—Table 17 shows the distribution of maternal deaths by age groups and average age at death. The latter is about four years higher than the average age of all mothers at the time of childbirth. The rates per 1,000 live births by age groups show that age is a most important factor in maternal mortality. Though all the rates have shown a declining tendency, the inequalities between the age groups remain. The death rate for mothers 30-34 years of age is twice to three times as high as the rate at 20-24 years, and at 40-44 years it is five to ten times as high. The higher rate for the "under 20" age group, compared with the age group 20-24, is caused by the high proportion of illegitimate children born to young mothers in the "under 20" group.

² Excludes Newfoundland.

Causes of Maternal Deaths.—Table 18 shows the number and rate of maternal deaths by causes. Until a decade ago puerperal sepsis and toxæmias of pregnancy were by far the most important causes. Since 1936 the rate for puerperal sepsis has been reduced by almost 95 p.c. largely as a result of the use of sulpha and other antibiotics. Although there has been a reduction of over 70 p.c. since 1936 in the maternal death rate from toxæmias of pregnancy this group still remains a major cause of maternal deaths second only to complications of delivery.

Section 4.—Natural Increase*

As will be observed from Table 1 the rate of natural increase in Canada (excess of births over deaths) in 1926-30 was 13 per 1,000 population. Partly as a result of the depression the birth rate declined more than the death rate and the rate of natural increase fell to 9.7 in 1937. It increased steadily from 12.6 in 1940-42 to 19.3 in 1947, dropped to 17.8 in 1948, then rose to a high of 20.3 in 1954. A decrease to 20.0 in 1955 and 19.8 in 1956 was caused mainly by a drop in the birth rate.

Table 19 shows that the rates of natural increase in the provinces followed generally the rate for Canada as a whole. The high rates in the Prairie Provinces are caused by their relatively younger populations and consequent low death rates. In Quebec the death rate in the period 1926-30 was high but it has since declined steadily. High birth rates have given Newfoundland, New Brunswick and Alberta the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is towards an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio.

* For international comparisons, see Section 7, pp. 230-231.

Natural Increase in Urban Centres.—The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; the figures are presented in Table 2, pp. 199-200.

Section 5.—Marriages and Divorces*

Subsection 1.—Marriages

Table 20 shows the number of marriages and the marriage rates per 1,000 population in Canada and the provinces, and percentages of brides and bridegrooms, according to place of birth. For the country as a whole in 1956, and as has been the case for several years, 83 p.c. of the grooms were born in Canada—nearly 68 p.c. in the province in which they were married; over 87 p.c. of the brides were born in Canada—nearly 75 p.c. in the province in which they were married. However there are wide variations from this pattern as between provinces; as might be expected, in the older Atlantic Provinces and Quebec there is a greater tendency than in the other provinces to marry native Canadians, both partners often being born in the same province.

* For international comparisons, see Section 7, pp. 230-231.

² Newfoundland included from 1951 and the Yukon and Northwest

Age and Marital Status of Bridegrooms and Brides.—Almost 92 p.c. of the marriages in 1956 were between persons who had not previously been married; almost 5 p.c. of both brides and bridegrooms had been widowed, and well over 3 p.c. of the marriages were of divorced persons. The average age at marriage of bachelors was just over 26 and that of spinsters just under 23 years and six months. The average age of widowers and widows at the time of remarriage was double that of bachelors and spinsters. Over 90 p.c. of spinsters married in 1956 were under 30 years of age—76 p.c. under 25 years. Over 83 p.c. of bachelors were under 30 years with 55 p.c. of these under 25 years of age.

As has been the case in several other countries in recent years, couples are marrying younger than was the case a generation ago. Since 1940 the average age of men at the time of their first marriage has dropped from 28 years to just past their 26th birthday; that of girls from 24 years and eight months to 23 years and five months. Table 21 shows the age pattern at marriage for all brides and bridegrooms for the years 1955 and 1956.

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 22 shows the very strong influence that religion has on marriage. About 71 p.c. of all marriages are between persons of the same religious denomination; in 1956 among those of Jewish faith it was over 93 p.c.; among Roman Catholics nearly 89 p.c.; United Church 62 p.c.; and Eastern Orthodox over 59 p.c.

Subsection 2.—Dissolutions of Marriage (Divorces)

For many years after Confederation the number of divorces granted in Canada was small. There were fewer than 20 divorces in every year before 1900, 21 in 1903, 51 in 1909 and 60 in 1913. These numbers represent less than one per 1,000 of the yearly number of marriages.

At the end of World War I in 1918 the number of divorces increased. The generally unsettled conditions and the long separation of men on Active Service from their wives may have contributed to this increase. Changes in law and procedure may also have been a further factor—at present, Quebec and Newfoundland are the only provinces in which applicants for divorce must secure a private Act of Parliament. The number of divorces increased from 11 in 1900 to a peak of 8,199 in 1947, declining gradually to a postwar low of 5,263 in 1951. Since then the annual number has been fluctuating between 5,600 and 6,100.

¹ By a new rule adopted in August 1948, a *decree nisi* became absolute at the end of three months and as a result a number of divorces did not become effective until the following year.

Section 6.—Canadian Life Tables

Three official life tables for Canada have been published: the first was calculated on the basis of the deaths of 1930-32 and the census population of 1931; the second on the basis of the deaths of 1940-42 and the census population of 1941 and the third was based on the Census of 1951 and deaths during 1950-52. In addition tables have been computed for Canada as a whole for the years 1945 and 1947 based on estimated populations by sex and age and the deaths recorded as having occurred during those years. The life table values for 1951 are given in abbreviated form in Table 24.

Life tables give a summary of the health and general conditions of survival of the population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1951, of 100,000 males born, 4,325 died in their first year so that 95,675 survived to one year of age; 326 died in their second year so that 95,349 survived to two years of age, and so on. At 100 years of age only 90 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the average number of years which a person might expect to live if the mortality rates in the given years remained constant.

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late 'teens to early 30's and from age 50 to 65. For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. At the mortality rates given in the 1951 Life Table (see Table 24) about 15,000 males would have died before reaching age 50 as compared with about 11,000 females; only 55,000 of the original group of 100,000 males would have survived to age 70 as compared with about 66,500 women.

By 1951 life expectancy at birth in Canada had reached a new high record of 66.3 years for males and 70.8 for females—comparable to the expectancy for other countries of the world with highly developed medical and public health care. Once a child has passed its first year of life however its life expectancy increases appreciably. At one year of age a male child at present mortality risks may, on the average, expect to live an additional 68.3 years and a female 72.3 years, representing for an infant boy a gain of two full years more than his expectation at birth and 1.5 more years for an infant girl. The expectation of life of a 15 year old boy is 55.4 more years; of a 15 year old girl 59.2 years. At 25 years of age the expectation is about 46 years for men and almost 50 for women and at age 70, 10.4 years for men and 11.6 for women.

Table 25 summarizes the life expectancy figures extracted from the Canadian Life Tables for 1931, 1941 and 1951. Life expectancy at birth increased for men from 60 in 1931 to over 66 years in 1951 and from 62 to 70.8 years for women during the same period. This is a gain for males of 3.4 years since 1941 compared with a gain of almost 3 years in the previous decade; females gained 4.5 years since 1941 compared with 4.2 years in the preceding decade. Thus, since 1931 a total of 6.3 years have been added to male life expectancy and female longevity has been lengthened by 8.7 years.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, since 1931, 2.6 years have been added to the life expectancy of a 5 year old male, 1.7 years to a 20 year old, almost 6 months to a 40 year old and barely three months to a 60 year old as compared with 6.3 years for a newborn male. During this period life expectancy for a 5 year old female gained 5.6 years; for a 20 year old 4.7 years, 2.6 years for a 40 year old and 1.5 years for a 60 year old as compared with 8.7 years for a newborn female.

Longevity has improved for both sexes, though more so and at all ages for females, but there has been only slight improvement for males beyond middle life. Briefly the rapid decline in the death rate for infants of both sexes is continuing, with slower declines with advancing age, so that relatively stationary death rates have been established from about 50 years onwards for males and up to about 80 for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. The arbitrary population base of 100,000 of each sex in the tables has been subjected to the mortality rates in effect in 1950-52, and the life expectancy computed as if those death rates at each age were to prevail during their lifetime. Actually the theoretical 200,000 infants born in 1950-52 will most probably have a pattern of survival and life expectancy quite different from that of the present life table as they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1950-52.

The improvement in life expectancy, particularly among children and adolescents is owing mainly to the substantial reduction in recent years of mortality from infectious diseases; on the other hand diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the past two decades. As approximately 12 p.c. of deaths in 1951 occurred among infants and an additional 72 p.c. among persons over 50 any additional improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combating diseases associated with middle and old age, such as cardio-vascular-renal conditions and cancer.

Section 7.—International Comparisons of Vital Statistics

The following table gives a summary of Canada's general and provincial vital statistics rates along with those of several other countries. It will be noted that the low crude death rate in Canada is bettered by only three countries and that some of the provinces have lower rates than most other countries. The birth rate also helps to make Canada one of the fastest growing countries and this country currently ranks sixth among those listed. However there is marked room for improvement in rates of infant mortality; nine of the countries listed have lower rates than Canada.

26.—Principal Vital Statistics Rates of Selected Countries 1956

NOTE.—Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths.

PART I.—PUBLIC HEALTH

HEALTH IN CANADA

Advances in medical sciences and the development of health services have contributed to a marked improvement in the health of Canadians during recent years. Higher nutritional standards, better housing and the growth of social services have had a favourable influence. The greatest development in these areas has taken place since the end of the second world war, a period marked by record high fertility and relatively heavy immigration. There has also been a marked shift in health indices. Canada's crude death rate and maternal, infant, and neonatal death rates have shown as much proportionate decrease in the past ten years as had occurred during the previous twenty.

* Except where otherwise indicated, this Chapter was prepared by the Research and Statistics Division of the Department of National Health and Welfare, Ottawa.

Improvements in health conditions have affected people of all ages, though the greatest impact has been made on health of infants and youths. For some younger age groups death rates have dropped by more than two-thirds during the past quarter-century; gains made in older age groups have been much more modest. During the twenty-year period up to 1951 life expectancy at birth for males rose from 60 to 66 years and for females from 62 to 71 years. Average age at death, a cruder index of the life span, in the thirty-year period up to 1956 advanced for males from 40 to 58 years and for females from 42 to 61 years.

Some improvements in health can be directly related to specific public health measures, others to general advances in medical care. Well established community procedures like chlorination of water supplies, pasteurization of milk, sanitary disposal of sewage and health inspection of food handling have done much to reduce the incidence of typhoid fever and other water and food-borne infections. Vaccination has eliminated smallpox from Canada, though as recently as 1928 over three thousand cases of smallpox were reported in this country.

The extensive development of antibiotics and other prophylactic agents such as poliomyelitis vaccine has served to reduce the severity or the degree of disability caused by many primary infections and to provide protection against secondary infection. In 1956 only 1.8 p.c. of all deaths were due to infectious diseases, including tuberculosis; thirty years ago infectious disease accounted for 12.6 p.c. of deaths. Similar decreases in deaths have occurred in other diseases such as rheumatic fever and pneumonia where infection plays a part in other disease processes.

But, while many of man's oldest diseases are being controlled, the nature and cure of chronic and degenerative illness remain too largely unknown, and new sources of ill health are emerging from the complex development of industrial civilization. In this country and elsewhere occupational hazards from toxic substances and accidents have become a matter of increasing concern. The contamination of air and water for the community from industrial wastes becomes a progressively more severe problem. Accidents are assuming an alarming position among the leading causes of death, vehicular and other traffic accidents resulting in a tragic mounting loss of life. The rapid development of urban living has also created many other problems related to health. Inadequate housing and recreation facilities, excessive use of alcohol, drug addiction, and juvenile delinquency are special urban problems. Increasing use of radioactive agents in many different fields of endeavour requires special health precautions and the general problem of the effects of radiation on life is one of the most important and pressing of today.

Health of Mothers and Children.—Continuing high fertility produced a record of 450,000 births in Canada in 1956, but the 1956 infant mortality rate of 32 still stands far above the Swedish and Netherlands rates of 17 and 19 deaths per thousand live births. Of the 14,399 infants who died during their first year, nearly two-thirds of deaths occurred during the first 28 days of life. Immaturity, congenital malformations and birth injury continued to be the leading causes of infant deaths. For mothers, 278 deaths in 1956 established a new low rate of maternal mortality, approximately one-tenth the rate 25 years ago. National differences continue to affect the national picture of maternal and infant deaths.

Health of Young People.—Following the first year of life survival rates are high throughout childhood. Although more than one-third of the population are between one and 20 years of age, they account for only one of every 25 deaths. Accidents account for the largest number of deaths in childhood, principally traffic casualties and drownings. Respiratory and digestive disorders are also leading causes of death.

Despite the relatively low number of deaths, sickness rates in childhood remain high. The Canadian Sickness Survey of 1951 showed that 87 p.c. of children under 15 reported sickness and 57 p.c. reported time spent sick in bed. Each child suffered an average of three sicknesses a year, a sickness lasting 12 days on the average. Colds and influenza which are rife at all ages were a leading cause of sickness. The communicable diseases

of childhood, (measles, mumps, chickenpox, whooping cough and scarlet fever) also accounted for much sickness; well over a million cases of these diseases were reported during the survey year. In March 1957 there were nearly five thousand persons suffering from such long-term conditions, generally congenital or arising in early childhood, as epilepsy, cerebral spastic infantile paralysis or the late effects of infantile paralysis and there were over 10,000 mentally defective persons receiving allowances for total and permanent disabilities, in addition to those in institutions.

Health of Adults.—The health of the adult population has also been affected by modern preventive and treatment services and control of many infectious respiratory and digestive diseases has markedly reduced death rates from these causes. Degenerative diseases, on the other hand, continue to take an increasing toll of life and health through the working years.

Thirty years ago women experienced a higher death rate than men through their reproductive years; the situation is now reversed, with women's death rates reduced by two-thirds and male death rates reduced by one-half. Accidents, frequently occupational, are the leading cause of death for men; past the age of 30 cancer becomes the leading cause of death for women. From age 50 on there are marked trend differences in death rates between the sexes. While the rates for women in their 50's and 60's have dropped by about one-third there has, over the past quarter-century, been no significant decrease in the male death rate; in 1955 there were seven men who died for every four deaths among women in this age range. Half the deaths of both sexes are due to heart disease. One-third of female deaths and one-fifth of male deaths result from cancer. Diabetes also ranks as a leading cause of death for both sexes. Accidents continue to take a heavy toll with higher rates among males.

The Permanent Physical Disability Study carried out as a supplement to the Canadian Sickness Survey in 1951 reported that 317,000 persons aged 45 to 64 were permanently physically handicapped; of this number 136,000 were severely or totally disabled. The high death rate from degenerative diseases in the adult population is preceded in many instances by periods of illness and disability.

Health of Older People.—The growing burden of chronic illness in old age is reflected in mortality and morbidity data. In 1955, 63 p.c. of deaths over age 65 were caused by heart and artery diseases; 15.6 p.c. were the result of cancer. Cardiovascular disease and cancer account for approximately one-third of all old age admissions to general hospitals and a large share of hospital care in old age is for respiratory and digestive ailments. The chronic nature of sickness in old age is emphasized by the findings of the Canadian Sickness Survey. Persons over 65 accounted for only 7 p.c. of the survey population but for 15 p.c. of the total days of illness. Much disability was permanent as was indicated by the fact that 162,000 persons over 65 were estimated to be severely or totally disabled. Heart disease, arthritis, impairments from accidents, blindness, deafness and chronic diseases of the nervous system accounted for 60 p.c. of all persons reporting permanent disability. The Canadian Sickness Survey did not include residents of chronic care institutions. In 1955 there were about 140,000 persons under care in mental, tuberculosis and other chronic care hospitals. Persons over 65 years of age accounted for one-quarter of all separations from mental institutions. One-quarter of discharges and two-thirds of deaths in mental institutions in old age were diagnosed as senile or suffering from cerebral arteriosclerosis.

Health Problems.—The increasing impact of chronic disease and the continuing high death rates in the productive years of life caused by degenerative diseases, high accident rates, the threat presented by radiation and other hazards to the health of the Canadian as well as other peoples are the subject of increasingly intense research in many countries. Canadian research has made a considerable contribution both in terms of guiding hypotheses and in clinical work. The active participation of Canadian scientists in international research ensures that Canadians are able to benefit quickly and freely

from any new findings which may modify established medical practice. The system of informational services, preventive public health and health care programs being built up across the country brings to increasing numbers of Canadians the resources and facilities that make possible the raising of health standards.

Section 1.—Federal, Provincial and Municipal Health Activities

Public health services in Canada are provided through the federal, provincial and local governments, with important contributions being made by voluntary agencies.

The Federal Government provides consultant and specialist services to the provinces, assists in the financing of provincial programs, provides services to special groups such as veterans and Indians, exercises control over the standard and distribution of food and drugs, maintains quarantine measures and is responsible for the carrying out of certain international health obligations.

The provinces play the major role in the provision of public health services to the people of Canada. Most programs are administered by the province or by local government under provincial legislation.

Voluntary agencies organized nationally, provincially or locally provide many services and carry on programs of health education.

Subsection 1.—Federal Health Activities

Federal participation in health matters is largely centred in the Department of National Health and Welfare, with certain important programs being administered by the Department of Veterans Affairs which provides medical and hospital care to veterans for disabilities resulting from war service; the Department of National Defence which is responsible for the health of the Armed Forces and which, through the Defence Research Board, participates in medical research; the Medical Division of the National Research Council which administers grants for medical research; and the Dominion Bureau of Statistics which is responsible for the collection and compilation of health statistics. The Department of Agriculture has certain responsibilities in connection with food production.

Under the Department of National Health and Welfare Act of 1944 that Department is responsible for the administration of certain statutes, for research in health matters, for the carrying out of international health obligations undertaken by Canada and, in co-operation with the provinces, for the preservation and improvement of public health.

Under the Quarantine Act, the Department maintains a maritime and aerial navigation quarantine service against entry of infectious diseases; it advises on the administration of sections of the Immigration Act dealing with health and conducts, in Canada and overseas, the medical examination of applicants for immigration. It also provides care for sick mariners, as required under Part V of the Canada Shipping Act, and has certain national and international responsibilities with regard to the pollution of boundary and other waters.

Under the Food and Drugs Act, the Proprietary or Patent Medicine Act, and the Opium and Narcotic Drug Act, the Department is responsible for the control of the safety and purity of food and drugs; the registration, preparation and sale of proprietary or patent medicines; and control of the import, export and distribution of narcotic drugs.

The Department advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for recipients of these allowances; it is responsible for supervision of health conditions for persons employed on federal public works, as provided under the Public Works Health Act, and maintains a program for the conservation and promotion of the health of civil servants and other Federal Government employees. Medical advisory services are provided for the Department of Transport in all matters pertaining to the safety, health and comfort of air crew and passengers.

The National Health Program.*—The National Health Program, which consists of 12 separate grants available to all provinces and the territories, was introduced in 1948 for the development of health and hospital services. Since the inception of the program the provinces have steadily increased utilization of their grants. The annual amounts of expenditure in each fiscal year have been as follows: 1948-49, \$7,400,000; 1949-50, \$15,500,000; 1950-51, \$18,700,000; 1951-52, \$23,900,000; 1952-53, \$26,900,000; 1953-54, \$29,200,000; 1954-55, \$31,600,000; 1955-56, \$33,500,000; and 1956-57, \$36,300,000.

* A special article on the first five years of the National Health Program is given in the 1954 Year Book, pp. 215-223.

AMOUNTS EXPENDED UNDER THE NATIONAL HEALTH PROGRAM BY GRANT, YEAR ENDED MARCH 31, 1954 AND 1956

1.—Amounts Available to the Provinces and Amounts and Percentages Expended under the National Health Program, by Grant, Year Ended Mar. 31, 1957

Medical rehabilitation ⁵	1,000,000	487,723	49
Totals.....	52,879,515	36,280,143	69

¹ Authorized by P.C. 1956-33/660 and by Supplementary Estimates (Vote No. 655). For the purpose of this table, the amounts available for the Yukon and Northwest Territories were distributed by grant although the Order-in-Council did not show this distribution. ² Grant consisted of \$6,683,660 for new projects and a revote of \$11,155,324 to complete projects approved before Apr. 1, 1953, on which construction started before Oct. 1, 1953, and also projects approved after Mar. 31, 1953, and those approved prior to that date the construction of which commenced after Sept. 30, 1953. Also included is special revote of \$79,190 for the Yukon and Northwest Territories. ³ First introduced in fiscal year 1953-54.

Up to Mar. 31, 1957, aid for construction was approved for 64,788 beds, 8,183 bassinets, 11,450 nurses' beds and space in community health centres and combined laboratories exceeding 7,500 bed equivalents. Approximately 15,700 health workers had been trained or were undergoing special training and more than 6,000 additional health workers had been employed with federal grant assistance.

Federal Grants to Non-government Organizations.—Grants are paid directly to the following non-government agencies engaged in health work: the Canadian Red Cross Society, the Canadian Tuberculosis Association, the Victorian Order of Nurses, the St. John Ambulance Association, the Canadian Paraplegic Association, the Canadian Mental Health Association, the Health League of Canada, the Canadian Public Health Association, the Canadian National Institute for the Blind, L'Association Canadienne-Française des Aveugles, L'Institut Nazareth de Montreal, and the Montreal Association for the Blind.

Federal grants are also provided under the National Health Program to assist in the operation of special treatment services carried out in a number of provinces by voluntary organizations such as the Canadian Arthritis and Rheumatism Society and various agencies engaged in the rehabilitation of crippled children.

Medical Care of Indians and Eskimos.—In 1956, 18 hospitals, 44 nursing stations, 26 clinics, 8 nurse dispensaries and 62 other health centres were operated by the Department which also reimburses on a per diem basis the mission and other non-federal hospitals that provide accommodation for Indians and Eskimos. Full-time departmental medical officers serve the larger Indian reserves and part-time officers serve the smaller bands. Fees are also paid to local physicians for services to Indians. Information relating to all health services provided in the Yukon and Northwest Territories is given at pp. 250-251.

Consultative Services.—Certain Divisions of the Department provide technical information and advice concerning the evaluation of programs and procedures and the establishment of standards in various health fields; they conduct surveys in research and development both independently and in co-operation with other departments and agencies. These Divisions include Blindness Control, Child and Maternal Health, Occupational Health, Nutrition, Mental Health, Dental Health, Epidemiology, Hospital Design, the Laboratory of Hygiene, Information Services, and Research and Statistics.

Federal Hospital Insurance and Diagnostic Services Offer.—During 1956 and 1957 considerable progress was made toward the development of a federal-provincial system of hospital insurance and laboratory and radiological diagnostic services. For some years the Provinces of British Columbia and Saskatchewan have operated programs of hospital insurance on the basis of universal coverage and in the Provinces of Alberta and Newfoundland there have been similar programs covering smaller percentages of their population.

In January 1956 the Federal Government offered to share on a grant-in-aid basis the costs of hospital insurance and laboratory and radiological diagnostic services on certain conditions. The offer was conditional on its acceptance by a majority of provinces representing a majority of population. Universal benefits must be available within the province and the offer specified shareable and non-shareable costs. Standard ward hospital care must be provided as a basic benefit and the costs of superior accommodation must be charged to the patient who might, if he chose, insure voluntarily for this accommodation. It was anticipated that there would be substantial variation between provinces in the patterns of provincial organization and methods of financing, whether by personal premiums, sales taxes, general provincial revenues or combinations of these.

The Hospital Insurance and Diagnostic Services Act passed by the Parliament of Canada was proclaimed on May 1, 1957, authorizing the Government of Canada to enter into agreements with provincial governments. By the summer of 1957 it was apparent that at least eight provinces had indicated their intention of proceeding with hospital insurance plans along the lines of the federal proposal.

Subsection 2.—The Dominion Council of Health

The Dominion Council of Health is a statutory advisory body to the Minister of National Health and Welfare, established in 1919 and deriving its present legislative authority from Sect. 7 of the National Health and Welfare Act 1944 (R.S.C. 1952, c. 74). It is composed of the Deputy Minister of National Health who acts as Chairman, the Deputy Ministers of Health of each of the ten provinces and five appointees of the Governor in Council, selected by tradition to represent such major segments of the population as agriculture, organized labour and women's organizations.

The duties and powers of the Council as formally prescribed by the Governor in Council are:—

- (1) The consideration of matters relating to the promotion or preservation of the health of the people of Canada and the initiation of recommendations and proposals to the Minister of National Health and Welfare and other appropriate authorities in regard thereto;
- (2) The furnishing of advice to the Minister of National Health and Welfare in respect to the matters provided in Sect. 5 of the Department of National Health and Welfare Act, relating to the promotion or preservation of the health of the people of Canada, over which the Parliament of Canada has jurisdiction.

Through the Council a direct means of co-operation at the technical level is provided between provincial health departments and the Department of National Health and Welfare. In addition to being able to draw on both federal and provincial resources to aid its deliberations, it is assisted by a number of technical advisory committees composed of federal and provincial officials in different specialized fields. These committees include the Technical Advisory Committee on Public Health Laboratory Services, the Advisory Committee on Mental Health, the Federal-Provincial Nutrition Committee, the Federal-Provincial Conference on Health Education, the Federal-Provincial Conference of Communicable Disease Control Directors and the Technical Advisory Committee on Public Health Engineering.

The Council usually meets twice each year. Any member may submit items for the agenda and any agency wishing to make representation to the Council may do so. Consideration of a matter by the Council usually infers that it is of some common interest or concern to more than one province.

Although the Council is of a purely advisory character its recommendations reflect the considered opinions of senior health administrators and scientific workers across the country and have had very considerable influence on the development of public health administration in Canada. The recommendations frequently have led to an early combined approach by federal and provincial governments which might otherwise have been achieved only after long periods of negotiation. It has taken an active part in the development of the National Health Program and, in addition to advising on the general operation of the program and on situations developing in different provinces, has played an important role in such combined federal-provincial projects as the National Sickness Survey. Through the arrangements made by the Council for the production and distribution of ACTH and cortisone for use by clinical investigators throughout Canada it has been estimated that the clinical assessment of their value was advanced by at least two years. In the same way the Council was able to facilitate arrangements for the production of gamma globulin and later of Salk vaccine.

Subsection 3.—Provincial and Municipal Health Activities

Provincial health functions commonly include central planning and administration; the operation of laboratories and of special programs affecting the entire province in such fields as cancer, mental health and tuberculosis; consultant service to local authorities; and either supervision or administration of local services.

At the local level responsibility for services varies widely but municipalities in most provinces provide basic services and participate in the cost of hospital care for indigents. In recent years there has been a rapid growth of health services in smaller centres and rural areas through the organization of health units with full-time staff serving counties or other combinations of local government areas. These units provide a generalized program that includes public health nursing, sanitary inspection, communicable disease control, child and maternal health and school hygiene and health education. Financial and administrative responsibility usually is shared by the provincial and the local authority. Municipalities outside fully organized health-unit areas usually appoint part-time medical officers and other personnel while the provincial authorities assume responsibility in the areas lacking municipal organization.

Newfoundland.—Health services in Newfoundland are administered largely by the Province and include provision of public hospital and medical care in large areas of the Province.

General Public Health Services.—A preventive service is operated in St. John's through public health nurses. Dietary supplements such as orange juice and cod liver oil are distributed throughout the Province. Environmental health services are administered through an inspection service in St. John's and regional offices at Corner Brook and Grand Falls. The Division of Laboratories administers a public health laboratory, the St. John's General Hospital laboratory and a blood bank. Routine diagnostic work is being decentralized through the employment of combined laboratory and X-ray technicians in outpost cottage hospitals.

Hospital and Medical Care.—The Department of Health provides prepaid medical and public ward hospital care to almost 50 p.c. of the population through its Cottage Hospital Plan; free medical and hospital care to indigents wherever facilities are available; and, under a program introduced in 1957, free public ward hospital care and out-patient diagnostic services for all children under 16 years of age. It operates a large general hospital at St. John's as well as 18 cottage hospitals and seven nursing stations distributed along the coastline, and also pays private physicians and non-governmental hospitals for the care of patients covered by the three public programs. In northern areas, responsibility for service has been delegated to the International Grenfell Association and the Notre Dame Bay Memorial Hospital Association, where community prepayment plans have been integrated into the Cottage Hospital Plan.

The Cottage Hospital Plan is financed from local subscription fees and general provincial revenues. In most areas, prepayment of \$15 annually by the head of each family and \$7.50 for single adults entitles subscribers to out-patient diagnosis and treatment, home visits by the doctor, and hospital care in the local hospital or the St. John's General Hospital. Each hospital is directed by a medical health officer responsible for domiciliary care in a medical practice area adjoining the hospital, while additional medical health officers and nurses supply care in outlying districts.

Mental Health.—Mental Health services are centred at the Hospital for Mental and Nervous Diseases in St. John's which operates in-patient and out-patient services, a day-care centre and consultant and educational services. All treatment is free of charge.

Tuberculosis.—With tuberculosis incidence above the national average, tuberculosis control has been of particular importance in Newfoundland. Two provincial sanatoria, as well as tuberculosis units in two other hospitals, provide free treatment for all cases of pulmonary tuberculosis. Preventive, case-finding and follow-up services are handled by the Tuberculosis Dispensary at St. John's and the West Coast Sanatorium in Corner Brook. The Newfoundland Tuberculosis Association participates in mass X-ray surveys, B.C.G. vaccinations, and rehabilitation services. Tuberculosis control activities have contributed to such reductions in tuberculosis hospitalization rates that early in 1957 a part of the St. John's sanatorium was converted into much needed accommodation for mental patients.

Cancer.—Special diagnostic and treatment services for cancer are located at the St. John's General Hospital, and treatment is subsidized by the Province.

Poliomyelitis.—Special diagnostic and treatment services for poliomyelitis are located at the St. John's General Hospital, and treatment is subsidized by the Province.

Venereal Disease.—Provincially administered venereal disease clinics are operated at St. John's and at various cottage hospitals throughout the Province; free treatment and drugs are available to persons attending the central clinic, to cottage hospital subscribers and to medical indigents.

Crippled Children.—Voluntary agencies assist in development of appropriate programs; one such agency, the Sunshine Camp Association, offers restorative services to physically impaired children.

Rehabilitation.—The Rehabilitation Branch, through the Co-ordinator of Rehabilitation, conducts case-finding surveys and arranges for counselling, training and job placement of disabled persons.

Prince Edward Island.—The Health Department supplies directly many of the services which in the larger provinces are provided by local health agencies. Most activities are carried out from the Health Centre at Charlottetown and a smaller office at Summerside, under the direction of the Deputy Minister, assisted by a full-time Health Officer.

General Public Health.—The Division of Public Health Nursing, through its staff of eleven public health nurses in various communities, is largely responsible for basic local services. Sanitary services, vital statistics, dental public health and health education are handled by separate health divisions; consultative child and maternal health services are provided. Laboratory procedures are performed by a central laboratory and seven hospitals; most tests are free of charge.

Hospital and Medical Care.—The Provincial Government pays grants of \$1 per patient day to general hospitals on behalf of all patients. Payment for the hospital or medical care of indigents is a discretionary responsibility of local government.

Mental Health.—Facilities for treatment of mental illness include the Riverside Hospital, the Provincial Infirmary largely for senile and mentally defective indigent patients, and an out-patient clinic for adults and children. Charges are made for maintenance if able to pay and the Province pays the remainder.

Tuberculosis.—Tuberculosis control includes case-finding and diagnostic clinics, treatment and rehabilitation services, conducted by the Province in co-operation with the Prince Edward Island Tuberculosis League. Diagnostic services are free. Treatment services at the Provincial Sanatorium in Charlottetown, though not unqualifiedly free, are heavily subsidized by the Province. Medically indigent patients receive free treatment.

Cancer.—Free diagnostic services, including hospitalization for diagnosis, are available to cancer patients through two clinics administered by the Division of Cancer Control.

Poliomyelitis.—Poliomyelitis treatment is provided at an orthopaedic centre located at the Provincial Sanatorium; the Health Department pays one-half of the cost of hospital and special nursing care during the acute stage of the disease and supplies free treatment to patients with residual paralysis.

Venereal Disease.—A venereal disease clinic operates in Charlottetown as a part of the provincial venereal disease control program.

Dental.—Free dental treatment at mobile clinics is available for Grade I and II children in rural areas. Preventive clinics operate for the topical application of sodium fluoride to pre-school and school children.

Rehabilitation.—General training of disabled persons is the responsibility of the Rehabilitation Co-ordinator in the Department of Education. Tuberculosis patients receive rehabilitation services with the aid of the Prince Edward Island Tuberculosis League.

Nova Scotia.—Most services provided by the Department of Public Health are administered through eight divisional or district offices. The Department of Public Welfare also administers certain services, notably those for mentally deficient children. Major provincial facilities include the Victoria General Hospital, the Nova Scotia Hospital for the mentally ill and three tuberculosis sanatoria.

General Public Health.—Most preventive services are carried out through the eight local divisional offices, which are staffed with public health nurses and sanitary inspectors under the supervision of a full-time medical health officer. Provincial laboratory services are organized through the Division of Public Health Laboratories which operates two branch laboratories and a central public health laboratory; the Division of Pathology which does tissue pathological examinations and related tests; and the Biochemistry Laboratories Division. All public health and histopathology procedures are supplied without charge. The Division of Laboratory and Radiological Services, under a part-time director, co-ordinates public health and hospital laboratory and radiological services.

Hospital and Medical Care.—The provincial Health Department meets the operating deficit of the Victoria General Hospital, and pays approved hospitals a grant of 50 cents a day on behalf of all patients; municipalities are required to pay up to \$9 a day for hospitalization of resident indigents. The Department of Welfare supervises a program of medical services, including physician's care in the home and office, for recipients of blind persons' allowances and mothers' allowances under a scheme sponsored by the Nova Scotia Medical Society and financed by per capita payments from the Province.

Mental Health.—Organized hospital services for the mentally ill include the Nova Scotia Hospital for active treatment, operated by the provincial Health Department; the psychiatric unit and out-patient department of the Victoria General Hospital; the Nova Scotia Training School for mentally deficient children, administered by the provincial Welfare Department; and 17 county homes and hospitals, operated by local government agencies, which mainly provide custodial care for long-term patients. Psychiatric clinics, maintained largely by the Health Department, are located at Halifax, Wolfville, Yarmouth and Digby. Treatment is free at the Nova Scotia Hospital, but in the other institutions relatives may be charged for the patient's maintenance. Resident indigents are supported by their municipalities.

Tuberculosis.—Free treatment is provided, mainly in the three provincial sanatoria and the municipal sanatorium at Halifax. Several tuberculosis units in general hospitals have now been discontinued. Divisional medical officers are responsible for detection, case-finding and follow-up of tuberculosis cases in their districts.

Cancer.—A clinic with radiation treatment facilities is included in the service provided by the provincial Victoria General Hospital.

Poliomyelitis.—A treatment clinic for poliomyelitis is included in the service provided by the provincial Victoria General Hospital. Branch poliomyelitis clinics have been established at Sydney, Antigonish and Yarmouth.

Venereal Disease.—Venereal disease detection services are provided mainly through the eight local health districts. Treatment is free of charge through the provincial venereal disease clinic in Halifax, or through private physicians reimbursed by the Province.

Dental.—Mobile dental clinics are operated by the Division of Dental Services to provide free treatment to rural school children under 13 years of age.

Rehabilitation.—Nova Scotia rehabilitation services to the disabled are the result of co-operative effort on the part of various voluntary agencies, professional groups and government departments, with general assistance from a Rehabilitation Co-ordinator appointed to the Department of Public Health. Among the most recent developments were the formation of the Nova Scotia Council for the Rehabilitation of Disabled Persons and the opening in 1956 of a civilian rehabilitation centre for both adults and children in Halifax. The Health Department and the Nova Scotia Tuberculosis Association combine in attending to the specific rehabilitation problems of tuberculosis patients.

New Brunswick.—Services are provided through the Health Branch of the Department of Health and Social Services which includes Divisions of Sanitary Engineering, Public Health Nursing, Communicable Disease Control, Maternal and Child Health, Health Education, Hospital Services and Laboratories. There is a high degree of provincial participation in the supplying of service and close working relationships with voluntary health agencies and hospitals.

General Public Health.—Although responsibility for local public health functions is divided between the Province and 15 local sub-health district boards of health, the provincial Health Department employs all six full-time medical health officers and nearly all public health nurses. Each medical health officer serves from two to four sub-health districts; the activities of most local boards are confined to vital statistics and environmental sanitation. The Bureau of Laboratories administers a central laboratory in Saint John and two branch laboratories in Moncton and Fredericton, designed to integrate public health and hospital laboratory services. Public health procedures, RH factor investigations and tumour diagnosis are performed free of charge but hospitals are charged for other procedures at cost.

Hospital and Medical Care.—The Province pays grants of 50 cents a day to approved general hospitals on behalf of all patients. Hospital and medical care for indigents is a matter of municipal discretion, but emergency admissions are a mandatory responsibility. Inspection of hospitals, hospital grants and the over-all planning of hospital facilities are directed by the Division of Hospital Services.

Mental Health.—All municipalities in the Province are responsible for paying a portion of the cost of treating indigent mental patients in provincial mental hospitals. The provincial Mental Health Division administers two mental hospitals and three community clinics as part of a comprehensive program which includes operation of a day training school for mentally retarded children. The provincial division of the Canadian Mental Health Association co-operates with provincial authorities in an active mental health education program.

Tuberculosis.—Free diagnostic services are provided in ten centres, including a central clinic in Saint John, by the Division of Tuberculosis Control. It also supervises and provides free treatment for both pulmonary and non-pulmonary tuberculosis in two privately operated, one municipal, and two provincially owned sanatoria.

Cancer.—Six cancer diagnostic centres and four treatment centres operate under the supervision of the provincial Director of Cancer Control. Diagnostic and radiation treatment services, including hospitalization, are made available without charge to the patient.

Poliomyelitis.—Acute and post-paralytic cases of poliomyelitis receive free care at the provincial Polio Clinic and Health Centre at Fredericton.

Venereal Disease.—The Division of Communicable Disease Control co-ordinates all infectious diseases and measures and administers a program of free treatment for venereal disease patients carried out at a clinic in Saint John and by private physicians.

Crippled Children.—Diagnostic and treatment services are provided free of charge for physically impaired children of indigent parents.

Dental.—Preventive dental health services for children are in course of development through the Dental Health Division.

Rehabilitation.—Rehabilitation efforts in New Brunswick have been stimulated by the appointment of a Rehabilitation Co-ordinator. Arrangements have been made to obtain specialized medical and vocational training services for needy disabled patients. Rehabilitation counselling and job placement are also in this new program. Tuberculosis patients receive rehabilitation aid from a program operated by the New Brunswick Tuberculosis Association.

Quebec.—The Provincial Ministry of Health plays a leading role in preventive public health services in Quebec though other activities are delegated to voluntary religious and lay organizations to a greater extent than in most other provinces.

General Public Health.—Except in Montreal and some other larger urban centres, full-time local public health services are administered directly by the provincial Health Department. The Division of Health Units supplies service through 70 county and multi-county units covering more than 60 p.c. of the population. Each unit is financed through a small local contribution and the remainder is provided by the Province. Technical direction and advice is available through the provincial divisions of Epidemiology, Tuberculosis, Nutrition, Demography, Health Education, Venereal Diseases, Sanitary Engineering and Industrial Hygiene. Laboratory services, including bacteriological and other analyses, are available to physicians and health units through the central public health laboratory in Montreal.

Hospital and Medical Care.—Free medical and hospital care are available to indigents from a variety of dispensaries, clinics and other charitable agencies. Under the provisions of the Public Charities Act, public hospital care and care in special institutions is provided free to persons certified as unable to pay their own costs. The agency supplying the service absorbs one-third of the indigent rate; the municipality of residence assumes 15 p.c. if rural and 24 p.c. if urban; the Province pays the remainder. The provincial Division of Medical Services to Settlers provides free nursing and physician's services to residents of isolated areas.

Mental Health.—Sixteen mental institutions and more than 25 clinics and psychiatric units are operated mainly by voluntary lay and religious organizations. Considerable responsibility rests with Laval, Montreal and McGill Universities, which co-operate with mental hospital authorities and co-ordinate community out-patient and in-patient services. The provincial Division of Psychiatric Hospitals administers an institution for mentally

ill prisoners, appoints superintendents to the various mental hospitals and exercises supervisory and regulatory functions. Patients who can afford to pay contribute part of the cost of maintenance, all other costs are paid by the Province.

Tuberculosis.—All sanatoria are operated by lay or religious groups under medical directors appointed by the Health Department; the cost of treating medical indigents is borne by the Province. The provincial Tuberculosis Division co-ordinates the work of the health units, voluntary agencies and sanatoria and gives assistance to municipal agencies carrying out anti-tuberculosis work.

Cancer.—Cancer services are centred mainly in hospitals affiliated with the three universities; financial assistance for diagnosis, treatment and hospital care comes from federal-provincial grants.

Poliomyelitis.—Treatment facilities are maintained by voluntary organizations.

Venereal Disease.—The provincial Venereal Diseases Division subsidizes free treatment administered by the out-patient departments of general hospitals, and supervises preventive and case-finding measures.

Crippled Children.—Treatment facilities for crippling conditions in children are maintained by voluntary organizations.

Rehabilitation.—Medical Rehabilitation facilities have been developed in a number of teaching and general hospitals and comprehensive services organized in four specialized rehabilitation centres—the Rehabilitation Institute of Montreal, the Occupational Therapy and Rehabilitation Centre in Montreal, the Quebec Rehabilitation Clinic in Quebec City, and the Rehabilitation Clinic operated by the Quebec Workmen's Compensation Board. The Department of Health and the Department of Social Welfare and Youth give grants to numerous organizations offering medical, educational and vocational services to groups of disabled persons.

Other Services.—Treatment facilities for arthritis and other diseases are maintained by voluntary organizations.

Ontario.—Public health responsibility has been decentralized in Ontario to a large number of locally administered health units and municipal health departments. The provincial Department of Health assists with auxiliary services, technical advice and grants-in-aid. Voluntary agencies administer certain programs for specific diseases, under sponsorship of the health department, while other special programs have been developed directly by the Province.

General Public Health.—Full-time local health services are available to more than 70 p.c. of the population through 29 health units, and 13 municipal departments. Provincial grants to health units, varying from 25 to 50 p.c. of the cost, are administered by the Health Units Branch of the Department. Specialized provincial Divisions provide consultative services in sanitary engineering, maternal and child hygiene, epidemiology, public health nursing, tuberculosis prevention, mental health, industrial health, venereal disease control and dental health. The Division of Laboratories provides public health and clinical laboratory services through a central laboratory in Toronto, 13 regional laboratories, five associated laboratories and a mobile unit. The Division of Industrial Hygiene investigates occupational health hazards, operates a laboratory and administers the civil service health centres.

Hospital and Medical Care.—General hospital care for indigents is a statutory municipal responsibility with minimum per diem rates fixed by the Province; additional assistance comes from provincial per diem maintenance and special grants paid to all public hospitals. In 1956, the Hospital Service Commission of Ontario was set up to plan hospital developments in the Province and to administer the proposed system of hospital care insurance

to be initiated. Certain medical services are available to recipients of all types of public assistance through a formal arrangement between the Province and the Ontario Medical Association. The program includes the services of a physician in his office or the patient's home, necessary consultations, home confinements, emergency drugs and refractions. Monthly per capita payments by the Department of Public Welfare to the Medical Association for these services are administered by a special agency, "The Medical Welfare Plan".

Mental Health.—Fifteen mental hospitals and two training schools for mentally defective persons are administered by the Division of Mental Health. Travelling clinics and out-patient departments are operated by some provincial hospitals but most community and child guidance centres are the responsibility of local health departments or voluntary groups. Extensive grants are available for construction of psychiatric units in general hospitals. The Province pays for most of the cost of care in mental hospitals.

Tuberculosis.—All measures for the prevention and treatment of tuberculosis are the general responsibility of the Division of Tuberculosis Prevention. Local voluntary associations support provincially conducted X-ray surveys and chest clinics and operate 13 of the Province's 15 tuberculosis sanatoria. The Ontario Tuberculosis Association co-ordinates the work of the member agencies. Tuberculosis treatment is virtually free for most patients, although patients with means may contribute to maintenance.

Cancer.—Cancer services are provided through the Ontario Cancer Treatment and Research Foundation which administers or finances eight regional treatment centres and two diagnostic clinics; the program includes free radiotherapy for patients with insufficient means. Affiliated with the Foundation is the newly established Ontario Cancer Institute in Toronto, a hospital centre designed exclusively for cancer diagnosis, treatment and advanced research.

Poliomyelitis.—The Province pays most of the costs of hospital care of poliomyelitis patients during the post-paralytic phase, as well as costs of physiotherapy and nursing in specially designated hospitals.

Venereal Disease.—Venereal disease control is to a considerable extent decentralized through the municipal health departments and local health units; the central Division of Venereal Disease Control subsidizes eleven clinics for free diagnosis and treatment.

Crippled Children.—The Ontario Society for Crippled Children operates diagnostic clinics, treatment units, summer camps and other services.

Dental.—The Division of Dental Services administers grants for school treatment services and operates mobile dental clinics.

Rehabilitation.—Rehabilitation services for adults are provided through various voluntary organizations and government agencies. One of the best known facilities is the Medical Rehabilitation Centre for injured workmen, administered by the Ontario Workmen's Compensation Board. The Province has a rehabilitation program for handicapped persons not covered by other legislation. The 1955 Rehabilitation Services Act authorizes the purchase of approved rehabilitation services that may enable a handicapped person to engage in remunerative employment.

Manitoba.—Provincial health services in Manitoba are provided through divisions of health services and psychiatric services in the Department of Health and Public Welfare, and through several quasi-governmental and voluntary agencies. Public health and personal health care services have been developed in close co-operation with local authorities under the Health Services Act which authorizes preventive medical services through local health units, diagnostic services through laboratory and X-ray units, and the establishment of medical care and organized hospital districts.

General Public Health.—Full-time local public health services are available to 72 p.c. of Manitoba's population through the City of Winnipeg Health Department and 13 local health units jointly administered and financed by provincial and local governments. Each health unit has an advisory board, and the municipalities are responsible for one-third of the cost. The provincial Health Department employs and pays the staff, and co-ordinates field supervision through its Bureau of Local Health Services. Five local laboratory and X-ray units, with facilities centred in community hospitals, make modern diagnostic aids available to rural medical practitioners and reduce the direct cost to the patient. Services are offered on a prepayment basis, with personnel appointed and two-thirds of the cost paid by the provincial Health Department through its Bureau of Laboratory and X-ray Services. The provincial Section of Laboratory Services undertakes free public health procedures through one central and two branch laboratories.

Hospital and Medical Care.—Through the Bureau of Medical Care, groups of towns, villages and municipalities are encouraged to establish prepaid medical care by the employment of municipal doctors; there are 14 districts. The Bureau of Hospitalization is concerned with the over-all planning of hospital facilities, and the administration of provincial responsibilities under the Hospital Aid Act. The Province pays 40 p.c. of the cost of in-patient and out-patient hospital care for municipal indigents, with rates of payment for each hospital fixed by the provincial Hospital Rate Board. The municipalities are required to pay the remainder of hospital care costs but indigent medical care is a discretionary municipal responsibility.

Mental Health.—Provincial mental institutions are operated at Winnipeg, Selkirk and Brandon and a school for the mentally defective at Portage la Prairie. Community mental health services include out-patient services at mental hospitals and child guidance clinics. The mental institutions collect maintenance costs from patients who can afford them; the Province pays the remainder.

Tuberculosis.—Tuberculosis control is administered by the Sanatorium Board of Manitoba which operates four sanatoria (three of which are federally owned for Indian services) and several stationary and mobile chest clinics. Costs of diagnostic and treatment services for pulmonary and non-pulmonary tuberculosis are paid from public funds. The Province maintains a tuberculosis central registry and a follow-up service for discharged patients.

Cancer.—The Manitoba Cancer Treatment and Research Foundation, subsidized by the Province, administers cancer activities, including diagnosis, treatment, follow-up and statistical services. A free rural cancer biopsy service is in operation; in addition, diagnostic services are available without charge to medically indigent rural residents. Radium and X-ray treatments are free of charge to all residents of the Province.

Poliomyelitis.—The treatment program for poliomyelitis patients, administered by the Bureau of Epidemiology, provides free public ward care for the first 21 days following admission to hospital, and additional free hospitalization following the 60th day after admission until discharge.

Venereal Disease.—The Bureau of Venereal Disease Control operates a free treatment clinic in Greater Winnipeg and pays physicians for treatment of patients in other parts of the Province who are unable to pay.

Rehabilitation.—The Society for Crippled Children and Adults acts as a central rehabilitation agency for adults and children. Its program includes disability assessment clinics, purchase of treatment services and prosthetic appliances, guidance training and follow-up services. Rehabilitation services for tuberculosis patients are administered by the Sanatorium Board. The provincial co-ordinator of rehabilitation, employed by the Department of Health and Public Welfare, exercises general supervision over the program, screens applicants for rehabilitation services, and operates a central registry of disabled persons. Over-all planning is the function of the Rehabilitation Commission, an advisory body representing the numerous groups concerned with the problem.

Saskatchewan.—Saskatchewan has emphasized development of personal health care services and the integration of public health and medical care for a dispersed rural population. Some programs are decentralized through health regions, medical care districts and hospital districts; most others are centrally administered by the Department of Public Health and several special agencies.

General Public Health.—Full-time community public health services are provided to 65 p.c. of the population through nine health regions, the Northern Administration Health District, and city health departments in Regina and Saskatoon; elsewhere provincial staff supply partial services. Administrative authority in the health regions is vested in regional boards, but public health staff are appointed by the Province; under joint financing arrangements the provincial Health Department pays two-thirds of public health costs in most regions.

The provincial Regional Health Services Branch has the dual function of co-ordinating policies and services within health regions, and supervising the activities of the technical divisions including Sanitation, Nursing Services, Communicable Disease Control, Venereal Disease Control, Nutrition, Child Health and Dental Health. The Provincial Laboratories supply free public health tests through the central laboratory in Regina and operate a mail order clinical testing service for physicians and small hospitals in rural areas.

Hospital and Medical Care.—Under the Saskatchewan Hospital Services Plan, which is a universal compulsory hospital insurance scheme, residents are eligible for in-patient public ward care through the annual prepayment of a personal tax of \$20 by all persons 18 years of age or over, and of \$5 for each dependant under 18 years of age, with a maximum family tax of \$45. Additional funds are provided, from general revenue as needed, including part of the proceeds of a 3 p.c. sales tax. The Medical and Hospital Services Branch is responsible for the operation of the Hospital Service Plan, supervises the operations of the municipal doctor programs and the Air Ambulance Service. It administers a program of health care services to public assistance recipients and their dependants.

The Medical Services Division administers a broad range of medical, dental and optical services and provides drugs (subject to deterrent charges) for public assistance recipients through arrangements with the health professions. Persons and their dependants receiving blindness or mothers' allowances, provincial supplementary allowances to the universal old age pension, certain social aid cases and provincial wards are eligible. The Province pays the full cost and, for most of the eligible cases, the hospital insurance tax as well.

At the local level, municipal doctor plans in about 160 municipalities supply a varying range of medical care benefits to about 170,000 persons, while another 50,000 are covered by the Swift Current Health Region prepaid medical care plan which includes general practitioners and specialist services and dental care for children under 12 years of age. Services are financed by personal and property taxes plus provincial grants.

Mental Health.—The Psychiatric Services Branch operates two mental hospitals, a psychiatric unit in a general hospital and a training school for mentally deficient persons; in addition it administers all community psychiatric services, including three full-time and seven part-time clinics. Free care is given for all mentally ill and mentally defective persons requiring hospitalization.

Tuberculosis.—The tuberculosis control program, operated by the Saskatchewan Anti-Tuberculosis League, includes preventive and case-finding services financed mainly by voluntary subscriptions, and free treatment for both pulmonary and non-pulmonary cases, financed by provincial per diem grants and municipal levies. The League operates three sanatoria as well as mobile and stationary clinics.

Cancer.—The Saskatchewan Cancer Commission co-ordinates all cancer control measures and maintains cancer clinics at Saskatoon and Regina providing free diagnosis and therapy, including surgery.

Venereal Disease.—Four clinics offering free diagnosis and treatment are maintained by the Venereal Disease Control Division.

Dental.—Two health regions operate curative dental programs, employing full-time dentists, and four regions were served by dental hygienists on regional staff.

Rehabilitation.—The Physical Restoration Division is developing medical rehabilitation services for disabled adults and children. Free treatment and rehabilitation services for poliomyelitis patients are provided through two in-patient treatment centres and two physical restoration centres; the latter two centres also serve cerebral palsy and other conditions. Auxiliary services such as transportation and field clinics are supported by the Saskatchewan Council for Crippled Children and Adults, while the Department of Public Welfare and Rehabilitation administers vocational rehabilitation and co-ordinates services.

Alberta.—Basic public health and hospital services are decentralized through local health units, municipal health departments, nursing districts and hospital districts. The Department of Public Health supervises and subsidizes local programs, and administers the various specialized preventive services, specific disease programs, and personal health care for selected groups.

General Public Health.—Eighteen full-time local health units and three full-time city health departments serve 89 p.c. of the population. Partial local services are provided through 29 municipal nursing districts, several provincial sanitary inspection areas and various municipal boards of health in rural areas outside health units.

Health units and municipal health departments are locally controlled but the Province pays 60 p.c. of the cost of approved services. The provincial Division of Local Health Services co-ordinates technical assistance from Sanitary Engineering, Communicable Diseases, Health Education, Nutrition, Vital Statistics and other divisions. Public health bacteriology and tissue pathology tests are available through the Provincial Laboratory; most tests are performed free of charge.

Hospital and Medical Care.—The Division of Hospital and Medical Services provides free hospitalization for maternity patients and administers a program of medical and hospital services for public assistance recipients; it shares with the municipalities in the costs of the Provincial-Municipal Hospital Plan.

Hospitalization, medical, dental, optical and special treatment services are supplied without charge to old age security recipients who qualify for supplementary pension, old age assistance pensioners, blind pensioners, recipients of mothers' allowance and widows' allowance as well as to the dependants of such persons. Medical and related services are provided by agreement with the Alberta College of Physicians and Surgeons and the Dental Association, while hospital care is paid through agreement with the Associated Hospitals of Alberta. The Department of Public Welfare pays 60 p.c. of the cost of medical and hospital care for local indigents through grants to municipalities.

Under provincial supervision the locally operated Provincial-Municipal Hospital Plan provides public ward care and special services to most of the province's population. Costs are distributed between the patient, the municipality and the provincial health department. The patient is charged \$1 a day for public ward care and up to \$1 a day for special services. The remainder of the basic ward rate and the special service rate established for each hospital by provincial regulation is paid by the municipality, which is then reimbursed by the Province for 60 p.c. of this expenditure, or alternatively 50 p.c. if the municipality participates only in the standard ward care program.

Mental Health.—Mental health facilities, administered by the Division of Mental Health, include five mental hospitals, a training school for mental defectives, and community and child guidance clinics. Provincial grants support the operation of two psychiatric units in general hospitals.

Tuberculosis.—Tuberculosis services are administered by the Division of Tuberculosis Control in co-operation with the Alberta Tuberculosis Association. The Division directs diagnostic services and administers two sanatoria; the entire cost of treatment for resident tubercular patients and out-patient pneumothorax is paid by the Province. Mass X-ray surveys and rehabilitation work are functions of the voluntary association.

Cancer.—The Cancer Services Division operates three clinics; on the recommendation of a clinic, surgical, X-ray, radium treatment and hospitalization for diagnostic purposes are provided free of charge for qualified residents requiring such services.

Arthritis and Rheumatism.—For rheumatoid arthritic patients under 25 years of age, the Province bears the cost of hospital care for a period up to 90 days and the cost of medical treatment.

Poliomyelitis.—All residents suffering from poliomyelitis receive free medical, surgical and hospital care and rehabilitation.

Venereal Disease.—Free diagnostic, therapeutic and follow-up services are available for venereal disease cases through stationary and mobile clinics.

Crippled Children.—Two diagnostic and treatment clinics for cerebral palsy are maintained in Calgary and Edmonton; home care instruction is given. Supplementary services for children with other disabling conditions are arranged by voluntary groups.

Rehabilitation.—The co-ordination of rehabilitation services for adults is the responsibility of the Rehabilitation of Disabled Persons Branch in the Department of Public Welfare. Medical rehabilitation services are being developed in the larger general hospitals. A leading facility is the Rehabilitation Clinic for out-patients operated by the Workmen's Compensation Board. Rehabilitation services for alcoholics are offered by the Alcoholism Foundation of Alberta, financed largely by a provincial grant.

British Columbia.—Except for mental health, most health and welfare services in British Columbia are combined in the Department of Health and Welfare, which includes the Health Branch, the Welfare Branch and the Hospital Insurance Service. Various non-governmental agencies conduct health programs which are officially recognized by the Provincial Government. Mental health services are administered by the Department of the Provincial Secretary.

General Public Health.—Full-time local public health services are administered and financed jointly by provincial and local authorities through 16 health units, and by local authorities in the metropolitan areas of Vancouver and Victoria-Esquamalt. Excluding Indians, for whom services are provided by Federal authorities, over 99 p.c. of the Province's population receives public health service from these units. The Provincial Bureau of Social Health Services includes Divisions of Health Units, Public Health Nursing, Public Health Engineering, Environmental Management and Preventive Dentistry. Laboratory services are provided free of charge through the central public health laboratory in Vancouver and branch laboratories in Victoria and Nelson.

Hospital and Medical Care.—Public ward hospital care on a province-wide basis is provided at nominal cost to the patient through the British Columbia Hospital Insurance Service; costs are met from general revenue, provincial sales tax and payment of \$1 by the patient for each day of hospital care. Medical, surgical and optical services, prescribed drugs and limited dental services are provided by the Province to all persons (and their dependants) receiving the universal old age pension or who can qualify for the provincial

supplementary allowance, to recipients (including dependants) of blindness, mothers' or disability allowances or local relief, and to certain child wards. A subsidiary agency of the British Columbia Division, Canadian Medical Association, supplies medical and surgical services to the above categories in return for per capita payments by the Province. The Medical Services Division of the Welfare Branch pays medical premiums and administers and pays for drug, optical, dental and other services; the municipalities contribute 20 p.c. of the cost incurred by their residents. Hospital costs are met by the B.C. Hospital Insurance Service.

Mental Health.—Mental Health services are administered by the Department of the Provincial Secretary. The administrative units include the Essondale Mental Hospital, the Crease Clinic of Psychological Medicine, stationary and travelling child guidance clinics, an out-patient department and day hospital, a training school for mental defectives, the Geriatrics Division and Research Division. The Crease Clinic functions as an investigatory and active treatment centre for short-term patients. Those able to pay are expected to do so, but most of the operating costs of the mental health program are borne by the Province.

Tuberculosis.—Three sanatoria, and several stationary and mobile clinics are in operation. The Province bears most of the cost of treatment services, with some contribution from the municipalities, but patients are expected to pay according to their ability.

Cancer.—Provision for the treatment and control of cancer is the responsibility of the British Columbia Cancer Foundation which maintains treatment centres in Vancouver and Victoria, ten consultative clinics throughout the Province and a boarding home attached to the centre at Vancouver. The Foundation also provides free province-wide biopsy service. The Province subsidizes the Foundation.

Venereal Disease.—Venereal disease clinics offer free diagnosis and treatment.

Dental.—The Division of Preventive Dentistry has launched several programs for children, including grants to dentists in remote areas, to city school dental services and for the development of preventive services in health units. Child dental clinics with local dentists participating are established in more than 60 communities.

Rehabilitation.—Rehabilitation facilities, extensively developed by voluntary organizations for specific disabilities, are co-ordinated through the Health Branch. The G. F. Strong Rehabilitation Centre provides in-patient and out-patient services for severely disabled adults and children. A large out-patient centre is operated by the B.C. Workmen's Compensation Board.

Other Services.—The Province subsidizes agencies concerned with special problems such as the Alcoholism Foundation of British Columbia, the Canadian Arthritis and Rheumatism Society and the Canadian Red Cross Blood Transfusion Service.

The Yukon and Northwest Territories.—Health services in the Yukon and Northwest Territories are provided through a network of services by different government agencies, by the churches and, in some settled areas, by private practitioners. Services for the native population are maintained by the Directorate of Indian Health Services of the Department of National Health and Welfare, for the white population by the Yukon Territorial Government, the Northwest Territories Council, and the Department of Northern Affairs and National Resources, and for the Armed Forces by the Department of National Defence.

There are four general hospitals with a total capacity of 151 beds in the Yukon Territory—hospitals at Whitehorse and Mayo are operated by the Territorial Government; another at Whitehorse is operated by the Department of National Defence; and one at Dawson is operated by the Roman Catholic Church. Of the six private physicians in the Territory, three are employed on a part-time basis as medical health officers by the Territorial Government and one by the Directorate of Indian Health Services. There are three dentists in the Territory, one of whom does part-time work for Indian Health Services.

There are 11 hospitals and eight nursing stations in the Northwest Territories with a combined total of 648 beds, of which about 461 are used for tuberculosis patients. Six hospitals at Aklavik, Chesterfield Inlet, Fort Simpson, Fort Resolution, Fort Smith and Fort Rae are operated by the Roman Catholic Church; two hospitals at Aklavik and Pangnirtung and one nursing station at Hay River are operated by the Anglican Church. The Yellowknife Administrative District operates one hospital and two others are maintained by mining companies at Port Radium and Norman Wells. The Department's Indian Health Services maintains six nursing stations and the Pentecostal Church operates one at Hay River. There are 11 physicians in the territory, nine of whom are employed by Indian Health Services, together with eight public health nurses and two dentists of whom six and one respectively are employed by Indian Health Services.

In the Yukon Territory health services for the non-native population are administered through the Commissioner for the Yukon. The Territorial Government provides complete treatment including transportation for tuberculosis and poliomyelitis patients and hospital care for indigent residents. Grants are made to cover the operating deficits of the two general hospitals owned by the Territorial Government. Public health services provided include communicable disease control, public health nursing, sanitary inspection and tuberculosis case-finding. Technical advice on the public health program is given by a part-time Chief Medical Health Officer resident at Edmonton.

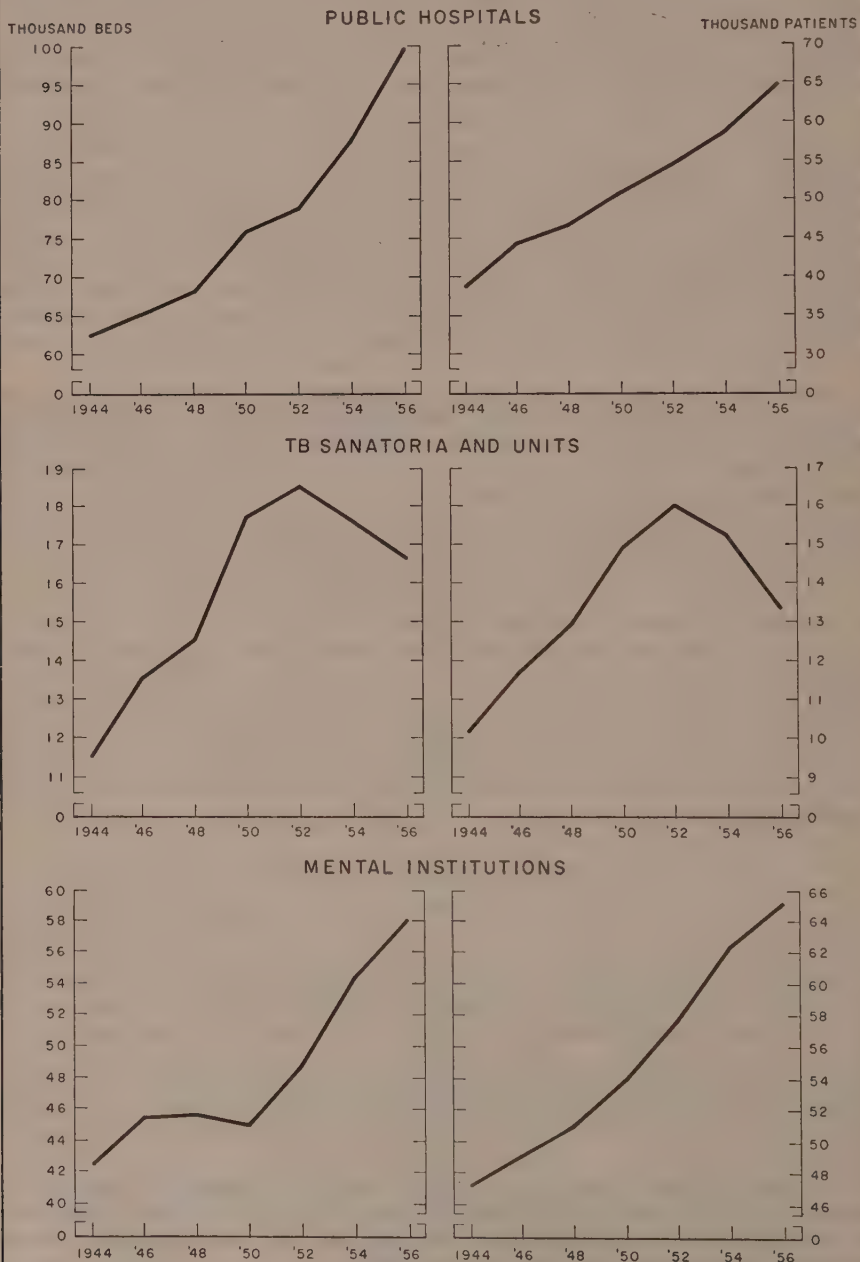

Health programs for the non-native population in the Northwest Territories provide free treatment including transportation for tuberculosis patients, free hospital care for the mentally ill, free treatment for venereal disease cases, and free cancer diagnosis including transportation to the Edmonton Clinic. Indigent residents are eligible for complete medical, dental and optical services as well as general hospital care. There is a special program of free dental services for children under 17 years of age. To support the mission hospitals the Territorial Government pays per diem grants on behalf of all paying patients. Public health services are largely handled by Indian Health Service personnel, the Director of Indian Health Services serving as Chief Medical Health Officer of the Northwest Territories.

Section 2.—Health Statistics

Statistical information on the health of Canadians is at present limited to the well established and highly standardized mortality, communicable disease and institutional statistics series, all of which have been available for a long period. As compared with these records, other national health statistics are still in an early development stage. So far the only source of information on general illness, health services and personal expenditure for health care is the Canadian Sickness Survey of 1950-51. Other projects deal with specific health problems or selected groups of the population and a good deal of statistical information is available from provincial and other health sources. A conference held in April 1957 with wide representation from governments and other interested agencies initiated machinery that will ensure the development of more adequate health statistics than now exist.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 194-232; those on hospital statistics in Subsection 1 following; and those on notifiable diseases in Subsection 3. Subsection 2 deals with certain analyses of the Canadian Sickness Survey and Section 4 with a study of visiting nursing services.

BED CAPACITIES OF, AND PATIENTS IN, HEALTH INSTITUTIONS AT DEC. 31, 1944-56

Subsection 1.—Health Institutions*

The advent of hospital insurance, anticipated for 1959, increased the importance of information relative to the amount of hospital care available in Canada. It is generally assumed that the insurance scheme will increase the amount of care demanded by the public, although the extent of the increase cannot be closely estimated. A fact that should be remembered in considering bed requirements is that a hospital cannot operate effectively with 100 p.c. of its standard capacity fully occupied; an occupancy of 80 p.c. is generally considered the optimum. Thus the addition of 1,000 beds could not be counted on to provide an additional 365,000 days of care per year, but only about 292,000.

At mid-1957, data for 1956 were still outstanding for many hospitals, and consequently over-all information was available only up to the end of 1955. At that point there were 1,360 hospitals known to be in operation in the country, and they had 170,639 beds (not including bassinets for newborn infants). Of this total, 142 hospitals were known to exist but did not submit reports. The remaining 1,218 hospitals, with 167,786 beds, provided at least partial statistical returns which are included in the tables of this Subsection. The capacity of the hospitals which did not report is estimated to be less than 2 p.c. of the total.

Two methods of hospital classification† have been employed in the tabular data. One is based on admission policy and is threefold (public, which admit any patient; private, which admit only paying patients; and federal, which treat special groups). Another axis is type of service provided by the hospital which is fourfold (general, treating a wide range of conditions; special, treating particular conditions such as chronic disease or orthopaedics; mental; and tuberculosis). The last two are kept separate because of their large size and their distinctive characteristics.

Both methods of classification are combined in Table 2 and shown by province. Public general hospitals are the most numerous single group, accounting in 1955 for over half the total number of hospitals in each province except Quebec. The number of beds in such hospitals constituted a majority of the over-all total in Newfoundland, Prince Edward Island, Saskatchewan, Alberta and the Territories, and they were the largest single group in every province except Quebec where there were a few more beds in public mental hospitals. As might be expected, the rank of the provinces in terms of population is the same as their rank in numbers of hospital beds, although not as their rank in numbers of hospitals. Saskatchewan, although fifth in number of population, was second to Ontario in number of public general hospitals.

* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics.

† The definitions in this paragraph are abridged from those officially in use. More detailed information is given in DBS publications: *Hospital Statistics 1955*, Vols. I and II; *Mental Health Statistics 1956* and *Financial Supplement; Tuberculosis Statistics 1956* and *Financial Supplement*.

Public and Private Hospitals.—Table 3 shows that substantial increases in the amount of space available and the amount of care provided in public general and special hospitals occurred over the 1951-55 period. In 1955 there were 858 reporting hospitals—80 more than in 1951, and they had six beds for every five at the beginning of the period. They provided an in-patient bed at some time during 1955 for four out of every 25 Canadians, and gave an average one and two-thirds days of care during the year to every man, woman, child and infant in Canada. No comparable rise occurred in private hospitals.

Table 4 presents data for 1955 on movement of patients and personnel (at the end of 1955 one in every 47 Canadians with a job was employed in a public general or special hospital). Table 5 gives a brief résumé of public hospital finances (gross expenditure amounted to \$20.57 per capita for the year—almost \$330,000,000). Cost per patient-day ranged from \$14.26 in British Columbia and \$12.95 in Ontario to \$11.30 in Newfoundland and \$9.32 in the Territories.

Mental Institutions.—Four of every thousand Canadians were patients in the country's 104 mental institutions at the end of 1956. The number of patients was 65,107, a figure 1,424 above the 1955 year-end total and almost double the 33,000 of 1932, when records were begun. Annual data from 1948 onward show continuous numerical advances, although the accelerated population increase in 1954, 1955 and 1956 produced slight declines in the rate per 100,000 population. The data on mental institutions, except for staff, include psychiatric units in other hospitals.

Since bed capacity stood at 58,014 at the end of 1956, a net overcrowding of 7,093 patients or 12.2 p.c. is indicated. A year before, this margin had been 6,674 or 11.7 p.c. The admission (first and re-admission) rate was higher than ever during 1956, having risen by just over 10 p.c. in one year. For every 32 persons who went from the 'outside' to a mental institution in 1955, 36 entered in 1956. As recently as 1950 there had been only 16. Much of this increase is undoubtedly accounted for by the increase in the number of psychiatric units with small capacities and high patient turnover rates.

The ratio of staff to patients reached a new high in 1956. Mental hospitals at the end of 1956 had 20,598 full-time personnel—2,055 more than in 1955—representing 32 employees for every 100 patients. Psychiatric units are not included in these figures because of the difficulty of segregating their maintenance staffs; psychiatric units ordinarily utilize the services of their parent hospital.

² Includes 1955-56 data for seven hospitals that did not report later data.

Tuberculosis Sanatoria and Units.—The effects of the development of new therapeutic techniques were in evidence at the end of 1956. At that point the number of beds devoted to care of the tuberculous in Canada was only 16,678, a drop of 1,005 in two years. Table 8 shows the provincial distribution of the bed complement and its location in various types of institution. Table 9 provides information on patients, personnel and facilities. Patient-days were down by 11.7 p.c. from 5,947,030 in 1954 to 5,250,555 in 1956, and personnel (in sanatoria only) dropped 10.4 p.c. from 10,864 to 9,739. Finances of public sanatoria are covered briefly in Table 10.

¹ Includes all institutions operated by the Provincial Division of Tuberculosis Control.

Federal Government Hospitals.—Under the terms of the British North America Act, health and welfare is the special responsibility of the provinces. Nevertheless the Federal Government is responsible for the health of certain groups such as war veterans and members of the Armed Forces, newly arrived immigrants, Indians and Eskimos, and lepers. The Federal hospitals are administered by three departments of government: in 1955 the Department of Veterans Affairs administered 19; the Department of National Defence, 8; the Department of National Health and Welfare's Indian and Northern Health Services, 18; and the Department of National Health and Welfare's Quarantine, Immigration Medical, and Sick Mariners' Services, 10. Certain hospitals of the Department of National Defence are not included in the figures of Table 11.

Subsection 2.—Canadian Sickness Survey, 1950-51*

A brief outline of the scope and methods of the Canadian Sickness Survey, a co-operative effort of federal and provincial departments, is given in the 1955 Year Book and some of the results of that Survey were published in the 1955 and 1956 editions. Study of the data still continues, the results being regularly published in a series of bulletins. During the year 1957 further results of the Survey became available, shedding for the first time some light on the frequency of various diseases in the population.

Incidence of Illness in Canada during the Survey Year.—Tables 12 and 13 show the estimated rates per 1,000 population of the incidence of illness as experienced by the Canadian population during 1950-51. The incidence includes all new illnesses that commenced within the survey year. Table 12 shows separate rates for 83 diagnostic groups, based on the International Statistical Classification of Diseases, Injuries and Causes of Death. Table 13 shows rates and percentages for 14 major diagnostic classes by age groups.

* Prepared in the Public Health Section of the Health and Welfare Division, Dominion Bureau of Statistics.

Estimated Prevalence of Illness in Canada at the Commencement of the Survey Year.—Table 14 gives the estimated rates per 1,000 population and percentages of the prevalence of illness as experienced by the Canadian population at the commencement of the survey year. All those illnesses which were reported in progress on the day the survey began were recorded. The table gives separate rates per 1,000 population and percentages for ten diagnostic classes and a few diagnostic groups for which reliable estimates could be prepared.

Subsection 3.—Notifiable Diseases

Notifiable diseases include essentially communicable diseases. The method of collecting notifiable disease statistics is outlined in the 1955 Year Book at pp. 246-247 and numbers of cases and rates for selected diseases for 1926 to 1955 are given in the 1956 edition at p. 267.

Table 15 shows the number of cases reported for selected notifiable diseases and the rates per 100,000 population for 1956. That year was free from major epidemics on a national scale and the number of cases of poliomyelitis dropped to a new low.

Subsection 4.—Visiting Nursing Services

Annual statistics on home nursing and health counselling services based on the experience of the Victorian Order of Nurses for Canada have been compiled and published by the Dominion Bureau of Statistics beginning with the year 1952. This survey does not provide a complete picture of such services in Canada because a number of other agencies, though smaller in size and coverage, are engaged in home nursing. The Victorian Order of Nurses, the only national organization of its kind, had 116 branches located in nine provinces in 1956. The Order provides visiting nursing services in the area of maternity care as well as care for medical and surgical cases. In addition, a number of community services such as classes for expectant mothers, industrial nursing, etc., are operated by the Order.

The services of the Order are always rendered under the direction of the patient's physician on a visit basis, and include bedside nursing, prenatal, postnatal and newborn care, and health instruction. The services are designed to meet the needs of patients who cannot or need not go to hospital, and patients who are awaiting admission to hospital, as well as those returning from hospital and still requiring nursing service such as dressings, treatments or other care. Part of the nurses' duties are the demonstration and supervision of nursing care to be carried out by members of the patient's family.

Since 1952 an increasing number of visits by the nurses was recorded each year; in 1956 over one million (1,041,782) visits were made, an increase of almost 16 p.c. over 1952. However, because of the trend toward the treatment of more and more chronic cases, the number of cases attended decreased between 1952 and 1954 and rose only slightly again in 1955 and 1956. The medical and surgical group, excluding normal maternity and other health instruction cases, was mainly responsible for the increase in visits during the five-year period. This group recorded an increase of 29.1 p.c. in visits but a decrease

of 10.8 p.c. in cases. This trend is characterized by the increasing proportion of older patients treated for medical and surgical conditions and thus shows the growing impact of an aging population on health services. The average age of patients of both sexes was 54.3 in 1952, 59.2 in 1953, 62.5 in 1954, 64.0 in 1955 and 65.1 in 1956. The average age of male patients increased from 45.2 to 65.0 during the period and of female patients from 57.2 to 65.2. The percentage of cases under 45 years of age decreased from 40.8 in 1952 to 29.9 in 1956, while the percentage of cases 45 years or over increased from 58.4 to 69.7. Corresponding percentage changes are observed in the recorded visits.

The average number of visits per medical and surgical case increased from 11.1 in 1952 to 16.1 in 1956, or by 45 p.c.; the average visits per maternity case decreased from 2.9 to 2.5 or by 14 p.c.

The increase in the number of post-hospital cases from 10,915 in 1952 to 15,396 in 1956 and the increase in the percentage of such cases to total cases from 20.5 to 32.4 is an indication of the greater use being made of home care as supplementing hospital services.

The causes accounting for the largest proportion of visits in 1956, with their average visits per case were as follows:—

<i>Cause</i>	<i>Visits</i>	<i>Percentage of Total Visits</i>	<i>Average Visits per Case</i>
	No.		No.
Diabetes.....	121,708	15.9	46.2
Diseases of the heart.....	115,259	15.0	21.2
Diseases of the central nervous system and sense organs.....	93,279	12.2	28.7
Anæmias and other diseases of the blood and blood- forming organs.....	77,910	10.2	22.3
Malignant neoplasms.....	56,357	7.4	17.5
Arthritis and rheumatism.....	39,454	5.2	28.5

In the field of maternity and newborn care, there were 34,140 normal maternity cases attended by Victorian Order nurses in 1956; of these 11,770 were attended at the prenatal and 22,370 at the postnatal stage. These figures do not include 1,925 maternity cases involving complications. Care and health supervision was provided to 29,994 newborn babies during that year. A total of 18,044 sessions were held for expectant mothers, which had an enrolment of about 7,000 persons.

PART II.—PUBLIC WELFARE AND SOCIAL SECURITY

Responsibility for social welfare in Canada is shared between the Federal Government, which is concerned largely with income security programs and the provision of services to special groups, and the provinces which delegate an important share of responsibility to the municipalities.

The creation of the Department of National Health and Welfare in 1944 established for the first time in the Federal Government a department in which public welfare is a major responsibility. The Department is charged with the administration of federal Acts relating to welfare which are not assigned by law to other departments. In addition to the general promotion of social welfare, the Welfare Branch of the Department administers

the family allowances program, the old age security program and the federal aspects of old age assistance, allowances for blind and disabled persons and of the new program of unemployment assistance. Grants to the provinces to promote physical fitness were introduced in 1943 but the Act providing for them was repealed in June 1954. The Department continues to provide physical fitness and recreation consultative services.

Unemployment insurance is administered by the Unemployment Insurance Commission; welfare and health services for veterans by the Department of Veterans Affairs; the welfare of Indians by the Department of Citizenship and Immigration and the welfare of Eskimos by the Department of Northern Affairs and National Resources.

Administration and financial responsibility in other fields of welfare such as mothers' allowances, child protection, services for older persons, community services and general assistance or relief are provided by the provinces and their local subdivisions.

Section 1.—Federal Government Programs

Subsection 1.—Family Allowances

The Family Allowances Act of 1944 is designed to assist in providing equal opportunity for all Canadian children. The allowances involve no 'means test' and are paid entirely from the Federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances.

Allowances are payable in respect of every child under the age of 16 years who was born in Canada, or who has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Payment is made each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of \$6 for each child under 10 years and \$8 for each child 10 or over but under 16 years. (Prior to September 1957 the rates were \$5 for each child under 6 years, \$6 for each child from 6 to 9 years, \$7 for each child from 10 to 12 years, and \$8 for each child 13 or over but under 16 years.) The allowances are paid by cheque, except for some Eskimo and Indian children in remote areas for whom payment is made largely in kind because of lack of exchange facilities and the desirability for education in the use of nutritive foods.

If the allowances are not spent for the purposes outlined in the Act payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who is married and under 16 years of age.

The program is administered by the Family Allowances and Old Age Security Division of the Department of National Health and Welfare, through regional offices located in each provincial capital. A welfare section in each regional office deals with welfare questions arising from administration of the allowances. A Supervisor of Welfare Services advises each Regional Director and reports through him to the Chief Supervisor of Welfare Services, who acts in a similar advisory capacity to the National Director. The actual preparing and issuing of the cheques is the responsibility of the treasury division of each regional office which reports to the Chief Treasury Officer of the Department of Finance attached to the Department of National Health and Welfare. The Regional Director for the Yukon and Northwest Territories, located in Ottawa, is responsible for payments to families in those areas.

Through the Department of Citizenship and Immigration the Federal Government pays family assistance at the rate of \$5 per month for each child under 16 years of age supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returning to Canada to reside permanently. This allowance is paid quarterly and for a maximum period of one year.

Subsection 2.—Old Age Security

The Old Age Security Act of 1952 as amended November 1957, provides a universal pension of \$55 a month (\$40 prior to July 1, 1957, \$46 from July 1 to Oct. 31, 1957) payable by the Federal Government to all persons aged 70 or over, subject to a residence qualification. To qualify for pension a person must have resided in Canada for 10 years (previously 20 years) immediately preceding its commencement or, if absent during that period, he must have actually been present in Canada prior to it for double any period of absence and must have resided in Canada at least one year immediately preceding commencement of pension. The pension is suspended when a pensioner leaves Canada but on his return may be resumed and, if absence has not exceeded six months, may be paid retroactively for as many as six months of absence in any calendar year.

The pension is financed on a pay-as-you-go method through a 2-p.c. sales tax, a 2-p.c. tax on taxable corporation income and, subject to a limit of \$60 a year, a 2-p.c. tax on taxable personal income, which are paid into the Old Age Security Fund. The pension is paid from the Consolidated Revenue Fund and charged to the Old Age Security Fund. The program is administered by the Family Allowances and Old Age Security Division of the Department of National Health and Welfare, through the Family Allowances and Old Age Security regional offices located in each provincial capital.

Persons in receipt of old age assistance who reach age 70 are automatically transferred to old age security. Others make application to the regional office.

As at October 1957, Alberta, British Columbia and Saskatchewan made supplementary payments to recipients of old age security who qualified under a means and residence test. In British Columbia the allowance could not exceed \$20 per month, in Alberta \$15 per month, in Saskatchewan it was a minimum of \$2.50 per month rising to a maximum of \$10 per month per person. In Ontario, the provincial government shared, to the extent of 60 p.c., in the first \$20 per month of supplement paid by a municipality to a needy recipient of old age security. In some provinces and in the Yukon, recipients of the pension who were in special need might be eligible for relief.

Subsection 3.—Government Annuities*

Under the Government Annuities Act (R.S.C. 1952, c. 132), passed in 1908, the Federal Government carries on a service to assist Canadians to make provision for old age. The Act is administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is \$10 and the maximum \$1,200 a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income. Annuities may now be arranged to reduce by \$55 per month at age 70 to fit in with payments under the Old Age Security Act.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest. Provision is made in the Act for group annuity contracts whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions or entirely from employer contributions. Group annuity plans now in effect cover a variety of industries and many municipal corporations throughout Canada. Annuities arising from individual contracts may be taxable in either of two ways: (1) if registered under Sect. 79B of the Income Tax Act for tax exemption on premiums, the annuity is fully taxable, or (2) if not registered the annuity is taxable on the interest portion only. Annuities arising from approved pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1957, the total number of annuity contracts and certificates issued excluding replacements was 434,116. On the latter date 73,997 annuities were being paid amounting to \$37,272,532 annually and 306,338 deferred annuities were being purchased. The net total amount of purchase money received up to Mar. 31, 1957, was \$1,040,628,000.

* Revised in the Government Annuities Branch, Department of Labour, Ottawa.

Up to Mar. 31, 1957, 1,061 corporations, institutions and associations, as compared with 1,014 up to Mar. 31, 1956, had entered into agreements with the Government to purchase annuities. Under these arrangements 179,434 employees or members were holding certificates for purchase of deferred annuities as compared with 177,379 one year earlier. The number of certificates issued under groups in the year 1956-57 was 12,476 as compared with 15,672 for 1955-56.

¹ Undetermined.**Subsection 4.—Other Federal Government Programs**

Unemployment Insurance and National Employment Service.—In 1940, by an amendment to the British North America Act, the Federal Government was given jurisdiction in the field of unemployment insurance and the Unemployment Insurance Act was passed, establishing a national system of unemployment insurance which is outlined in Chapter XVIII.

The National Employment Service is operated in conjunction with the unemployment insurance scheme. It is administered through local employment and claims offices and supervised by the Department of Labour. Statistics of positions offered and placements made are given in Chapter XVIII.

Prairie Farm Assistance.—The Prairie Farm Assistance Act is administered by the Department of Agriculture; a description of the legislation is given in Chapter IX.

Welfare Services for Indians and Eskimos.—The welfare of Indians and Eskimos is administered by the Department of Citizenship and Immigration and the Department of Northern Affairs and National Resources, respectively; this field is covered in the Population Chapter, pp. 146-150.

Section 2.—Federal-Provincial Programs**Subsection 1.—Old Age Assistance**

The Old Age Assistance Act of 1952 as amended November 1957, provides for federal reimbursement to the provinces for assistance to persons aged 65 and over who are in need and who have resided in Canada for at least 10 years (previously, 20 years) or who, if absent from Canada during this period, have been present in Canada prior to the commencement of the 10-year period for double any period of absence. On reaching age 70 a pensioner is transferred to Old Age Security. The federal contribution may not exceed 50 p.c. of \$55 per month (\$40 prior to July 1, 1957, and \$46 from July 1 to Oct. 31, 1957) or of the assistance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of assistance payable, the maximum income allowed and other conditions of eligibility.

For an unmarried person total income allowed, including assistance, may not exceed \$960 a year. For a married couple it may not exceed \$1,620 a year and, when the spouse is blind within the meaning of the Blind Persons Act, \$1,980 a year. Assistance is not paid to a person receiving an allowance under the Blind Persons or War Veterans Allowance Acts.

As at October 1957, Alberta, British Columbia and the Yukon made supplementary payments to recipients of old age assistance who qualified under a means and residence test. In British Columbia the allowance could not exceed \$20 per month, in Alberta, \$15 per month, and in the Yukon \$10 per month. In Ontario, the provincial government shared to the extent of 60 p.c. in the first \$20 per month of supplement paid by a municipality to a needy recipient of old age assistance. In some provinces and in the Yukon recipients of old age assistance who were in special need might be eligible for relief.

¹ Estimated population as at June 1 of each year for the Provinces (1957 data related to 1956 population) and 1951 Census data for the Territories. ² During fiscal year maximum assistance raised from \$30 to \$40 per month.

Subsection 2.—Allowances for Blind Persons

The Blind Persons Act of 1952 as amended November 1957 provides for federal reimbursement to the provinces for allowances to blind persons aged 18 or over who are in need and who have resided in Canada for at least 10 years. The federal contribution may not exceed 75 p.c. of \$55 (\$40 prior to July 1, 1957; \$46 from July 1 to Oct. 31, 1957) per month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable and the maximum income allowed.

To qualify for an allowance a person must meet the required definition of blindness and have resided in Canada for 10 years immediately preceding its commencement or, if absent from Canada during this period, must have been present in Canada prior to its commencement for a period equal to double any period of absence.

For an unmarried person, total income, including the allowance, may not exceed \$1,200 a year; for a person with no spouse but with one or more dependent children, \$1,680; for a married couple, \$1,980. When the spouse is also blind, income of the couple may not exceed \$2,100. Allowances are not payable to a person receiving assistance under the Old Age Assistance Act, an allowance under the War Veterans Allowance Act, a pension under the Old Age Security Act or a pension for blindness under the Pensions Act.

As at October 1957, Alberta, British Columbia, Saskatchewan and the Yukon made supplementary payments to recipients of blindness allowances who qualified under income and/or residence tests. In British Columbia, a flat rate allowance of \$20 per month was payable, in Alberta the supplement could not exceed \$15 per month and in the Yukon \$10 per month. In Saskatchewan a minimum of \$2.50 per month is payable, rising to a maximum of \$10 per month per person. In Ontario the government shared to the extent of 60 p.c. in the first \$20 per month paid by a municipality to a needy recipient. In some provinces and in the Yukon, recipients in special need might also be eligible for relief.

¹ Estimated population as at June 1 of each year for the Provinces (1957 data related to 1956 population) and 1951 Census data for the Territories.

Subsection 3.—Allowances for Disabled Persons

The Disabled Persons Act of 1955 as amended November 1957 provides for federal reimbursement to the provinces for allowances paid to permanently and totally disabled persons aged 18 or over who are in need and who have resided in Canada for at least 10 years. The federal contribution may not exceed 50 p.c. of \$55 per month (\$40 prior to July 1, 1957; \$46 between July 1 and Oct. 31, 1957) or of the allowance paid, whichever is the less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable, the maximum income allowed and other conditions of eligibility.

To qualify for an allowance a person must meet the definition of permanent and total disability set out in the Regulations to the Act and have resided in Canada for at least 10 years immediately preceding commencement of allowance or, if absent from Canada during this period, must have been present in Canada prior to its commencement for a period equal to double any period of absence.

For an unmarried person, total income including the allowance may not exceed \$960 a year. For a married couple the limit is \$1,620 a year except that if the spouse is blind within the meaning of the Blind Persons Act, income of the couple may not exceed \$1,980 a year. Allowances are not paid to a person receiving an allowance under the Blind Persons Act or the War Veterans Allowance Act, assistance under the Old Age Assistance Act, a pension under the Old Age Security Act, or mothers' allowances.

The definition of permanent and total disability employed under the Act requires that a person must be suffering from a major physiological, anatomical or psychological impairment, verified by objective medical findings. The impairment must be one that is likely to continue indefinitely without substantial improvement and that will severely limit activities of normal living.

The allowance is not payable to a patient in a mental institution or tuberculosis sanatorium. A recipient who is resident in a nursing home, an infirmary, a home for the aged, an institution for the care of incurables or a private, charitable or public institution is eligible for the allowance only if the major part of the cost of his accommodation is being paid by himself or his family. When a recipient is required to enter a public or private hospital the allowance may be paid for no more than two months of hospitalization in a calendar year, excluding months of admission and release. For the period that a recipient is in hospital for therapeutic treatment for his disability or rehabilitation, as approved by the provincial authority, the allowance may continue to be paid. The provincial authorities must suspend the payment of the allowance when in its opinion the recipient unreasonably neglects or refuses to comply with or to avail himself of training, rehabilitation or treatment facilities provided by or available in the province.

In the first two years of the program, over half of the persons granted an allowance had primary disabilities which were in two medical classes: (1) mental, psychoneurotic and personality disorders and (2) diseases of the nervous system and sense organs. The most frequently occurring primary disability was mental deficiency which was found in over 25 p.c. of all applicants granted an allowance.

As at October 1957, British Columbia made supplementary payments of \$20 per month to recipients of disability allowances who qualified under a residence test. In Ontario the government shared to the extent of 60 p.c. in the first \$20 per month paid by a municipality to a needy recipient. In some provinces and in the Yukon recipients in special need might also be eligible for relief.

¹ Program in effect for the last three months of 1954-55 fiscal year.

² Program became effective Apr. 1, 1955.

³ By Mar. 31, 1955, no payments had yet been made by the Federal Government to these provinces in which the programs became effective Jan. 1, 1955. Payments for April 1955 include certain amounts retroactive to Jan. 1, 1955.

⁴ Excluding the Yukon Territory.

Subsection 4.—Unemployment Assistance

Under the Unemployment Assistance Act of 1956 the Federal Government may share with a province and its municipalities the cost of financial assistance to unemployed persons. No distinction is made in legislation between the employable and the unemployable. Federal aid is thus available to assist a province with a heavy relief load because of unemployment, or with a high proportion of unemployable persons in receipt of aid, or a combination of the two. A 1957 amendment deleted a provision under which federal reimbursement was made only in respect to recipients in excess of 0.45 p.c. of the provincial population.

Reimbursement is made to the province for payments within the existing provincial framework of general assistance. The scale and conditions of relief payments to recipients continue to be determined by the provinces and municipalities, except that the province agrees not to make length of residence a condition for the receipt of assistance when an applicant comes from another province which has signed a similar agreement.

The formula excludes federal reimbursement for payments for persons receiving mothers' allowances or persons who would normally be considered eligible for mothers' allowances. While it also generally excludes inmates of public and charitable institutions, it provides for federal sharing of provincial and municipal payments for those in certain types of homes for special care. Those receiving various types of social security payments under other programs are also excluded but the Federal Government shares with the provinces any additional relief payments other than cost-of-living bonus or across-the-board pension supplements made to such persons who are unemployed and in need. Health care and administration costs are also excluded from Federal Government reimbursement.

Agreements for the payment of federal assistance, effective from July 1, 1955, have been made with five provinces—Newfoundland, Prince Edward Island, Manitoba, Saskatchewan and British Columbia—and from Jan. 1, 1956, with a sixth province—New Brunswick. These agreements extend for five years except that with Saskatchewan, which runs for three years.

Section 3.—Provincial Programs

Subsection 1.—Mothers' Allowances

All provinces have statutory provision for allowances to enable certain needy mothers to remain at home to care for their dependent children. The total cost of this assistance is paid from provincial funds except in Alberta where a portion of each allowance is charged to the municipality of residence. In Newfoundland the Mothers' Allowances program was incorporated in the Social Assistance Act 1954 which became effective Apr. 1, 1955, and the transference of all cases under the Mothers' Allowances Act was completed in March 1957.

Subject to the conditions of eligibility which vary from province to province, the allowances are payable to applicants who are widowed or whose husbands are mentally incapacitated and, except in Alberta, to those whose husbands are physically disabled and unable to support their families. They are also payable, except in Nova Scotia, to deserted wives who meet specified conditions; in several provinces to mothers who have been granted a divorce or legal separation; in some to unmarried mothers; and in Ontario to Indian mothers. Foster mothers are eligible under certain circumstances.

The age limit for children varies from 15 years in one province to 18 in another, with the limit being 17 in two provinces and 16 years in the remainder. Provision is made in most provinces to extend payment for a specified period if the child is attending school or if he is physically or mentally handicapped.

In all provinces applicants must satisfy conditions of need and residence but the amount of outside income and resources allowed and the length of residence required prior to application vary considerably, the latter, for example, from one year in Saskatchewan, Ontario, New Brunswick and Newfoundland to five years in Quebec. All provinces require that the applicant be resident at the time of application and generally that the child or children live with the recipient, and most provinces require that they continue to live in the province while in receipt of an allowance. In the six provinces in which British or Canadian nationality is a condition of eligibility, the applicant may qualify for mothers' allowances if the mother or father or child meet the specified provisions.

In each province the relevant Act is administered by public welfare authorities. Most provinces have a mothers' allowances board or commission which makes the final decision regarding eligibility and the amount of allowance granted, or acts in an advisory capacity. Rates of benefit as of June 1957 are given in Table 11 and the number of families and children assisted and amounts of benefits paid as at Mar. 31, 1955 and 1956, are given in Table 12.

11.—Maximum Monthly Rates under Provincial Mothers' Allowances Legislation, June 1957

Provinces	Mother and One Child	Each Additional Child	Disabled Father at Home	Family Maximum	Supplementary
Nfld. ¹	\$25	\$5	\$10	No limit to the number who may benefit	Rent to \$20 in rural and \$30 in urban areas; fuel to half a ton of coal monthly or equivalent in oil or wood during winter; clothing to \$24 yearly for child 1-5 yrs., to \$36 for child 6-16 yrs., to \$60 for person 17 or older. Also, an allowance of not more than \$30 a month may be granted if considered necessary for the proper support of the family.
P.E.I.	\$25	\$5	None granted	\$50	None granted
N.S.	No set maximum, rates are based on average family income for community in which family lives		No special provision	\$80	None granted
N.B.	\$35	\$10	None granted	\$30	An additional \$10 for rent if circumstances require it but only if allowance paid is below maximum.
Que.	\$60	\$3	\$10	None set (minimum granted \$5)	A supplementary allowance of \$5 may be paid to a beneficiary incapable of working. Where need exists a special monthly allowance may be paid under the Quebec Public Charities Act through the municipality or a social agency. The cost is met in large part by the Province, with some contribution by the municipality concerned.
Ont. ²	\$50 for mother or father and one child \$24 for foster mother and one child	\$10 for foster mother and 2 children, with \$10 for each additional foster child	\$10	None set	\$20 where need is apparent. A fuel allowance of up to \$24 a month may be granted from Sept. 1 to Mar. 31.

For footnotes, see end of table, p. 284.

11.—Maximum Monthly Rates under Provincial Mothers' Allowances Legislation, June 1957—concluded

Province	Mother and One Child	Each Additional Child	Disabled Father at Home	Family Maximum	Supplementary
Man.	\$51	\$10 for child 1-6 yrs. \$13 for child 7-11 yrs. \$15.50 for child 12-14 yrs. (subject to deductions for fourth and each additional child)	\$17.25	\$150 \$167.25 if disabled father at home	Up to \$50 where necessary, \$25 of which may be used for rent above the schedule maximum. Fuel allowance granted for seven months.
Sask.	\$40 for mother and one child \$30 for guardian and one child	\$10 for 2nd \$5 for each subsequent child (with parent or guardian)	\$10 (also if confined to a nursing home or sanatorium)	\$90 \$100 if disabled father at home, in nursing home or sanatorium	Municipality may grant supplementary aid. Costs are shared between the Province and municipality on a 75-25 basis. In unorganized territories the Province assumes full cost.
Alta.	\$60 \$70 may be granted when income or assistance does not exceed \$120 per year	\$20 for 2nd and 3rd child \$10 for 4th to 6th \$15 for 7th \$10 for 8th and 9th	None	\$165	Municipality may grant additional aid, 60 p.c. of the cost of which is reimbursed by the Province. In unorganized territories the Province assumes full cost.
B.C.	\$42.50 plus \$34 from Social Allowance funds	\$7.50 plus \$8.50 from Social Allowance funds	\$7.50 plus \$8.50 from Social Allowance funds if not in receipt of old age security, old age assistance or disabled persons allowance	A maximum is set but there is no limit to the number who may benefit	Extra expenditures for additional needs such as repairs and emergencies; also for dietary extras, housekeeper services, prenatal allowances and certain assistance to T.B. patients and contacts are met through Social Allowance funds. Costs shared by Province and municipalities on 80-20 basis but Province meets total cost of provincial cases and of prenatal allowances.

¹ In Newfoundland the mothers' allowances program was incorporated in the Social Assistance Act, effective Apr. 1, 1955.
² Revised rates became effective Sept. 1, 1957, under the Mothers and Dependent Children's Allowances Act, 1957. Under this Act allowances are calculated on the basis of family needs and income.

¹ Year ended Mar. 31.² Families receiving aid under the Mothers' Allowances Act, who were not yet transferred to Social Assistance (see p. 282).³ Not including \$175,997 and \$148,003 paid as supplementation from social allowance funds in 1955 and 1956 respectively.

Subsection 2.—Provincial Welfare Services

The care and protection of neglected and dependent children, care of the aged, social assistance or relief, and other special welfare services are governed by provincial legislation although in many areas responsibility for services rests with municipal or voluntary organizations. Though the programs and the methods of financing vary considerably, most provinces share the costs of some or all of the municipal services in organized areas and assume the total cost in unorganized territories. The medical services available to social assistance recipients are described at pp. 236-251, mothers' allowances are dealt with in the immediately preceding subsection, old age assistance at pp. 276-277, allowances for the blind at pp. 278-279 and allowances for totally and permanently disabled persons at pp. 279-281.

Newfoundland.—Provincial welfare services are administered by the Department of Public Welfare through a number of regional welfare centres.

Child Care and Protection.—Child welfare has developed largely as a public service and is administered by the Child Welfare Division. Neglected children, made wards of the Director, are placed in foster or adoptive homes or in institutions. The Department pays for the maintenance of wards, grants subsidies for children admitted to orphanages administered by religious organizations, and contributes towards the cost of educating blind and deaf-mute children in institutions outside the Province. The Division operates an Infants' Home providing short-term care.

The Division of Corrections, established in 1953, deals with juvenile delinquents and adult offenders and administers correctional institutions for boys and girls. A Youth Guidance Authority has been established.

Care of the Aged.—The Province maintains a Home for the Aged and Infirm at St. John's and also pays in whole or in part the cost of maintaining needy old people in the Salvation Army Home, in the Cowan Mission Association Home, in licensed boarding homes or in private homes. In 1955 a grant of 20 p.c. of costs, to be paid over a 10-year period, was made to the Roman Catholic Episcopal Corporation for the construction of a home and provision is made for grants to similar projects under other auspices.

Social Assistance.—Under the Social Assistance Act of 1954 which came into effect in April 1955, assistance is provided to needy persons previously aided under the Dependents' Allowances Act and the Mothers' Allowances Act. Aid for certain needy able-bodied persons is also provided. Federal payments to the Province made by agreement under the federal Unemployment Assistance Act 1956 (see p. 282) were made retroactive to July 1, 1955.

Prince Edward Island.—The Department of Welfare and Labour is responsible for the administration of provincial welfare services.

Child Care and Protection.—Under the Children's Protection Act, neglected or delinquent children are placed under the guardianship of the Director of Child Welfare. They are cared for in foster or adoptive homes, boarding homes or children's institutions. Provincial grants are made to child welfare agencies and to the two private orphanages, one Protestant and one Roman Catholic. Juvenile Courts are under the Attorney General's Department and juvenile delinquents are cared for at the expense of the Department of Welfare and Labour in correctional institutions of neighbouring provinces.

Care of the Aged.—The aged and infirm are cared for in Falconwood Mental Hospital and in two provincial infirmaries.

Social Assistance.—The Department provides direct social assistance in rural areas and assumes 50 p.c. of the cost of assistance granted by the City of Charlottetown and the incorporated towns and villages. The Department also operates a province-wide program of financial aid to families where the breadwinner is suffering from tuberculosis and is unable to support the family. Federal payments to the Province made by agreement under the federal Unemployment Assistance Act 1956 (see p. 282) were made retroactive to July 1, 1955.

Nova Scotia.—Provincial welfare services are administered by the Department of Public Welfare through a number of regional offices.

Child Care and Protection.—The child welfare program, including the inspection of institutions and the licensing of foster and maternity homes, is under the Director of Child Welfare. The Director supervises the 12 Children's Aid Societies to whom child care and protection is delegated and directly administers the program in the four areas in which societies are not organized. By court decision a neglected child may be made a ward of the Director or of a Children's Aid Society. Each Society receives annually a provincial grant of up to \$2,000, based on its performance and quality of service; a sum equal to 50 p.c. of funds received through private campaigns and from municipalities for general operating expenses; and an additional grant of not less than \$1,000, the maximum determined on a per capita basis. The cost of maintaining wards is shared by the Province and municipality of residence.

The Department operates the Nova Scotia Training School for mentally defective children and the Nova Scotia School for Boys for juvenile delinquents. It is also responsible for the operation of the nine Juvenile Courts and the supervision of their probation staffs. The municipality of residence is responsible for the maintenance of children in reformatories although the Province may contribute also if the reformatory complies with specified standards.

Care of the Aged.—The aged are cared for in municipal or county homes, in homes operated by religious or private organizations and in private boarding homes where the municipality of residence may contribute to the cost of maintenance. Homes for the aged are subject to provincial inspection but they do not receive direct financial assistance from the Province.

Social Assistance.—Relief to needy persons is a local responsibility under the Poor Relief Act except in the cities of Halifax and Sydney which provide welfare relief under their charters. The Province reimburses municipalities or welfare agencies which provide relief to transients lacking legal residence in the Province.

New Brunswick.—The Department of Health and Social Services administers provincial welfare legislation.

Child Care and Protection.—Under the Children's Protection Act, administered by the Minister of Health and Social Services, responsibility for protection and placement services is largely delegated to Children's Aid Societies. Guardianship of a neglected child may be vested in a Society, in the Director of Child Welfare or in the Court. Orphanages are operated by religious, private or municipal organizations. Boarding homes, with some exceptions, are licensed and are subject to the provincial inspection required for all child care institutions. The Province and the municipality of residence each contribute towards the maintenance of wards committed to an institution, and the Province reimburses municipalities for one-half of the cost of maintaining wards placed in foster homes, up to a prescribed maximum. The Province also makes grants to the Children's Aid Societies to assist in their general child welfare program. The Department may place blind or deaf-mute children in special schools outside the Province. Juvenile Courts are under the Attorney General's Department and delinquent boys may be placed in the Provincial Industrial School for Boys which reports to the Minister of Health and Social Services.

Care of the Aged.—Homes for the aged are operated under municipal, religious, fraternal or private auspices and are subject to provincial inspection but they receive no direct financial support from the Province.

Social Assistance.—Relief to needy persons is a local responsibility and is generally discharged through the provision of institutional or indoor relief to those in need. Outdoor relief is provided in a number of centres. Federal payments to the Province provided by agreement with the Department of Municipal Affairs under the federal Unemployment Assistance Act, 1956 (see p. 282) were made retroactive to Jan. 1, 1956.

Quebec.—Provincial welfare measures are administered by the Department of Social Welfare and Youth. Legislation passed in 1956 provided for the transfer to that Department from the Department of Health of responsibilities under the Public Charities Act for orphanages, nurseries, adoption and welfare institutions and the placement of abandoned children. The Public Charities Act embodies the Government's policy of granting subsidies to religious and private institutions rather than creating public services. Grants representing a major share of the costs of the services are made by the Province, with the municipalities and the institutions also contributing.

Child Care and Protection.—Needy or abandoned children are generally cared for in institutions such as orphanages and nurseries although there is an increasing use of foster homes by child welfare agencies. Children who are found by a Social Welfare Court or other court to be particularly exposed to moral or physical dangers may be admitted to recognized youth protection schools administered by the Department of Social Welfare and Youth. Municipalities of residence, depending on their size, contribute from 15 to 25 p.c. of the operating and maintenance costs of these schools and the Province the remainder and the entire cost of new construction. The Social Welfare Courts which are under the jurisdiction of the Department of the Attorney General, have statutory responsibility in connection with child and youth protection and certain other provincial programs and also serve as Family Courts. Children who have been exposed to tuberculosis but who have not been infected are placed with rural families under the supervision of the Department of Health in co-operation with child welfare agencies.

Care of the Aged.—Institutional care for indigent old people is provided under the Quebec Public Charities Act through private institutions. Under the same Act, family welfare agencies administer home allowances to needy old people who do not require institutional care. Standards in homes are governed by regulations under the provincial Public Health Act.

Social Assistance.—Assistance is given under the Public Charities Act, usually in the form of institutional care. The Department of Colonization operates a program whereby families in need are settled on the land in newly opened districts and granted financial aid until they become self-supporting. In these areas a disability pension scheme is linked to a program of free medical services.

Ontario.—Provincial welfare services are administered by the Department of Public Welfare. The Province is divided into 17 welfare districts each in charge of a supervisor.

Child Care and Protection.—Responsibility for the local administration of the Child Welfare Act is delegated by the Province to Children's Aid Societies under the supervision of the Director of Child Welfare. Maintenance costs of children made wards of a society or taken into care as non-wards on agreement with a municipality are paid by the municipality of residence with a 40 p.c. reimbursement by the Province. The Province also makes annual grants to the societies for their work other than the care and maintenance of children. Children's institutions are governed by provisions of the Charitable Institutions Act and day nurseries by the Day Nurseries Act. In 1957 the Children's Boarding Homes Act was passed requiring the registration of all premises not covered by other legislation in which five or more children not related to one another are lodged, boarded or cared for. The Act provides for inspection and for the establishment of standards in the operation of the homes. The Province makes per diem grants for children in charitable institutions and pays one-half of the operating and maintenance costs of municipal day nurseries. Juvenile Courts are under the Attorney General's Department while training schools for juvenile offenders are operated by the Department of Reform Institutions.

Care of the Aged.—Under the Homes for the Aged Act municipalities must provide institutional or boarding home care for the aged. The Province contributes 50 p.c. of the cost of constructing approved homes or of approved additions and extensions and 50 p.c. of their net operating and maintenance costs. It also pays up to 50 p.c. of the cost of maintenance in approved boarding homes. Private homes for the aged are licensed, inspected and assisted under the Charitable Institutions Act which provides grants-in-aid of construction equalling 50 p.c. of the costs up to \$2,500 per bed and a monthly maintenance payment of \$8 per resident. The Elderly Persons Housing Aid Act provides for grants to limited-dividend housing corporations building low-rental housing for elderly persons.

Social Assistance.—Under the Unemployment Relief Act the Province reimburses municipalities, up to a prescribed maximum, for 60 p.c. of their expenditures on relief to needy unemployables and on incapacitation allowances and rehabilitative measures for single, needy, handicapped residents. In unorganized areas the program is administered and financed by the Department. The Soldiers' Aid Commission extends emergency assistance and advice to ex-servicemen and their families.

Manitoba.—The Public Welfare Division of the Department of Health and Public Welfare is responsible for provincial welfare services.

Child Care and Protection.—The Director of Public Welfare administers provincial child welfare legislation, including the supervision of Children's Aid Societies and of child care institutions. The Public Welfare Division administers child welfare services in a large area of the Province, through decentralized district offices. In the remainder of the Province the Director supervises the four non-denominational Children's Aid Societies

in their respective areas. Neglected children may be made wards of the Director of Public Welfare or of a Children's Aid Society. Municipalities are responsible for the maintenance of wards with provincial reimbursement on the basis outlined below under Social Assistance. Payment of annual provincial grants to Children's Aid Societies is conditional on the provision of a basic level of service and the collection of substantial voluntary contributions.

The Division provides foster home care and supervision for mental defectives placed in the custody of the Director of Public Welfare and, with the Division of Psychiatry, operates a home for mentally defective girls. The Attorney General's Department is responsible for Juvenile Courts and operates a boys' home and a girls' home for delinquents.

Care of the Aged.—Institutions and nursing homes for the aged and infirm are supervised and licensed by the Department under public health legislation. Under the Elderly Persons Housing Act, the Province makes construction grants to municipalities, charitable organizations or limited dividend companies equalling 20 p.c. of costs for housing accommodation and one-third of the costs of building and renovating homes for the aged.

Social Assistance.—Municipalities are responsible for social assistance, which is defined as relief to indigents, together with maintenance costs of children under the Child Welfare Act. The Province reimburses a municipality to the extent of at least 40 p.c. of its social assistance costs; where it is to the municipality's advantage, provincial reimbursement is on the basis of 80 p.c. of the excess of the municipality's social assistance costs over the revenue the municipality receives from a tax levy of one mill on its equalized assessment. The Province is responsible for aid to persons without municipal residence as well as for general assistance in unorganized territory. Federal payments to the Province, made by agreement under the federal Unemployment Assistance Act 1956 (*see* p. 282), were made retroactive to July 1, 1955.

Saskatchewan.—Provincial welfare services are administered by the Department of Social Welfare and Rehabilitation.

Child Care and Protection.—The Department provides welfare services for children throughout the Province with the exception of Saskatoon where certain responsibilities are delegated to the Children's Aid Society. Children found to be neglected are, by court order, made wards of the Minister and are placed in foster homes, adoptive homes or institutions. A portion of the maintenance costs of wards, except of children born out of wedlock, for whom the Province assumes the entire cost, is paid by the municipality of residence. The Branch operates two institutions for the temporary care of wards and also a program of non-ward care.

The Corrections Branch of the Department is responsible for both adult and juvenile correctional services, supervises probation and parole services for juvenile delinquents and administers the Saskatchewan Boys' School and the provincial gaols. The Juvenile Court is presided over by a judge who devotes his time exclusively to cases of juvenile delinquency. Juveniles are discharged from correctional institutions only by parole. A Youth Guidance Authority supervises the discharging of juveniles from probation, from institutions and from parole.

Care of the Aged.—Aged and infirm persons are cared for in four provincial nursing homes and in private homes for the aged. The latter are inspected and licensed under the Housing Act which also empowers the Province and municipalities to subscribe to the stock of limited-dividend housing companies building low-rental accommodation for older persons. The Province may also make loans to the municipalities to assist them in subscribing. Capital grants amounting to 20 p.c. of construction costs and also maintenance grants equalling \$40 per bed per year, may be made to municipalities, church or charitable organizations sponsoring approved homes or housing projects.

Social Assistance and Special Services.—The costs of assistance to needy persons with municipal residence are divided on a 75-25 basis between the Province and the municipalities and the Province pays the entire cost for transients and for persons in unorganized areas. Federal payments to the Province made by agreement under the federal Unemployment Assistance Act 1956 (see p. 282) were made retroactive to July 1, 1955.

The Rehabilitation Branch provides training and placement services for the handicapped; one-half the cost of this training is borne by the Province and one-half by the municipality of residence. It is also responsible for the rehabilitation of minority groups and operates a farm where the métis—persons of mixed Indian and white stock who do not qualify under the Indian Act—are instructed in modern methods of farming while being paid for their work. Three schools are conducted for métis children.

The Department administers the Provincial Housing Act which empowers the Province to enter into public housing projects under the National Housing Act, and to stimulate construction of low-rental housing projects by limited-dividend housing corporations.

Alberta.—The Department of Public Welfare is responsible for the administration of provincial welfare measures. It has branches at the four larger centres and inspectors are located in suitable areas throughout the Province.

Child Care and Protection.—The Provincial child welfare program is directed by a Child Welfare Commission. Neglected children, made wards of the Government by court order or by agreement, may be placed in foster homes, adoptive homes or institutions. The cost of maintenance of wards is paid by the Province which recovers 40 p.c. of such cost from the municipality of residence. The Home Investigating Committee is responsible for the inspection and the licensing, where required, of all homes and institutions in which children are given care. The Attorney General's Department administers legislation regarding juvenile delinquency.

Care of the Aged.—Provincial grants equalling one-third of the cost or \$750 a bed, whichever is less, may be made to municipalities erecting or purchasing homes with ten or more beds for aged or infirm persons. The Province also meets up to 60 p.c. of the cost incurred by municipalities for the maintenance of indigent aged and infirm persons in homes licensed by the municipality in accordance with specified standards.

Social Assistance.—Municipalities are responsible for assistance to indigent residents but the Province reimburses the municipalities for up to 60 p.c. of the value of the assistance and pays the total cost of assistance to transients. The Province administers relief to residents of unorganized districts subject to a refund of 40 p.c. of the assistance from the districts. Families may be assisted through settlement on suitable farm lands. The Single Men's Branch maintains two hostels and one welfare centre to care for unemployable single homeless men without municipal domicile. The Province has also established a number of métis colonies where settlers have extensive fishing, hunting and trapping rights and are encouraged to engage in lumbering, agriculture and stock-raising. Educational services are provided and government operated stores sell goods at cost price.

Widows Pensions.—Under the Widows Pension Act, widows aged 60 to 64 years inclusive may receive pensions of up to \$46 per month. Also included in this category are wives of husbands committed to mental hospitals or deserted wives who meet the conditions of need and residence and are within the designated age group.

British Columbia.—Administration of provincial services by the Social Welfare Branch of the Department of Health and Welfare is decentralized through district and municipal offices in six regions covering the whole Province. Generalized field service is provided by provincial social workers. The staff of the Social Welfare Branch is also responsible for welfare services required in connection with a number of programs operated by the Health Branch.

Cities and municipalities of over 10,000 population must have their own social welfare departments to administer the social assistance program and to provide case-work services. The Province pays 50 p.c. of the salaries of municipal social workers or, where more than

one is needed, matches the municipal appointees, worker for worker. Smaller municipalities may have their own or amalgamated social welfare departments or they may pay for the services of the Social Welfare Branch.

Child Care and Protection.—The Child Welfare Division administers legislation governing the protection of children, including adoptions, and provides direct services except at Vancouver and Victoria where it supervises the Children's Aid Societies. Municipalities are responsible for the costs of maintaining wards but the Province reimburses them to the extent of 80 p.c. of such expenditure and pays the entire cost for children in unorganized areas. The Province pays the total maintenance cost of wards who are children of unmarried mothers. Child care institutions, boarding homes and day nurseries are licensed and supervised. The Social Welfare Branch administers an industrial school for delinquent boys and one for delinquent girls. Family case-work and rehabilitative supervision of children released from the schools are carried on in co-operation with the Psychiatric Division and the probation service of the Juvenile Courts. These courts are under the jurisdiction of the Attorney General's Department.

Care of the Aged.—The Province operates the Provincial Home for elderly, homeless men, the Provincial Infirmary for the chronically ill and the Provincial Homes for the Aged for senile and psychotic patients. It also licenses and supervises homes for the aged, nursing homes, and boarding homes, and where necessary shares with the municipalities on an 80-20 basis the costs of maintaining needy residents. The Province meets the total cost for provincial charges. Under the Elderly Citizens Housing Aid Act the Province makes grants amounting to one-third of construction costs to municipalities and non-profit corporations, including religious and service organizations, building homes or low-rental housing units for elderly citizens.

Social Assistance.—The social assistance program is administered by the Director of Welfare and supervised by the Family Division. It includes allowances to indigent individuals or families, counselling services, occupational training and the maintenance costs of nursing home or boarding home care. The Province reimburses the municipalities for 80 p.c. of the cost of basic and certain supplementary social assistance payments to indigent municipal residents and assumes the total cost of assistance granted for those without municipal residence. Federal payments to the Province made by agreement under the federal Unemployment Assistance Act 1956 (p. 282) were made retroactive to July 1, 1955.

Subsection 3.—Workmen's Compensation

In all ten provinces, legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment or by a specified industrial disease. A summary of provincial workmen's compensation legislation is given in Chapter XVIII.

Subsection 4.—Charitable and Benevolent Institutions

Statistics of charitable and benevolent institutions were secured by the Census of 1951 and covered the 1950 activities of 533 institutions, 490 being residential institutions and 43 being day nurseries. Summary statistics are given in the 1954 Year Book, p. 263.

PART III.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning and education. These agencies, some of which are described below, supplement the services of the federal and provincial authorities in many fields and play a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them.

The Canadian Welfare Council.—The Council, established in 1920, is a national voluntary association of organizations and individual citizens whose aim is to further the development of social services in Canada. Member organizations include community funds and councils, other private social agencies, various federal, provincial and municipal departments, and citizen groups and individuals active in the fields of health, welfare and recreation. It furnishes authoritative information, technical consultation and field service in the main areas of social welfare and provides a means of co-operative planning and action by public and private agencies.

The policies and programs of the Council are determined by its members under the leadership of a nationally representative board of governors. Aided by professional staff, the members work together through Divisions of Family and Child Welfare, Recreation, Public Welfare, Corrections, and Community Chests and Councils, and through special committees on such subjects as welfare of immigrants and the aging. Departments of the Council include the Information Branch and French Speaking Services.

Matters which have been under study by the Council include public assistance, health insurance, adoption, probation services, problems of the Hungarian refugees, homemaker services, recreation facilities, and united appeals. The Council undertakes surveys, on request, for agencies, communities and provinces. Council publications include the periodicals *Canadian Welfare* and *Bien-Être Social Canadien*, a directory of Canadian welfare services, pamphlets, and division bulletins.

The Canadian Red Cross Society.—Established in 1896 in Canada, the Society is affiliated with the International Red Cross and has branches in all ten provinces with a national headquarters in Toronto. Its objectives, defined in its Charter, are "... in time of peace or war to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering throughout the world". Its activities cover a very broad area, ranging from national and international disaster relief services, to the support of local projects such as the establishment and operation of local clinics, the provision of medical services to indigent children and the promotion of water safety campaigns. One of its major activities in Canada has been the operation of blood banks in seven provinces and in parts of two others; it also maintains outpost hospitals, nursing stations and emergency units in eight provinces, and the Alberta Red Cross Crippled Children's Hospital in Calgary. The Junior Red Cross promotes health education through its schoolroom branches across Canada, supports a special fund to supply treatment to indigent handicapped children in Canada and a fund to promote international understanding.

The Health League of Canada.—The Health League of Canada, first established in 1918 as a National Committee for Combating Venereal Disease, has broadened its scope until its membership covers sixty national associations supporting a wide variety of health activities. The primary objectives of the League are the promotion of personal and community health and the prevention of disease through health education. Its major activities are administered from a national office in Toronto, usually working through the affiliated organizations. Educational efforts include the provision of speakers for meetings and the preparation of radio scripts, health education films and literature; a magazine is published bi-monthly and weekly news bulletins are released to the press. The League also sponsors a National Health Week and a National Immunization Week.

Victorian Order of Nurses.—Since its inception in 1897, the Victorian Order of Nurses has provided a professional home nursing service, details of which are given on pp. 269-270.

St. John Ambulance Association.—The Priory of Canada of the Most Venerable Order of the Hospital of St. John of Jerusalem, popularly known as the St. John Ambulance Association, began from a local unit in Montreal in 1884. The Association is composed

of two parts, the St. John Ambulance Association and the St. John Ambulance Brigade, the latter being a group of volunteer field workers. Headquarters of the Association is in Ottawa, with provincial divisions in all provinces controlling their own programs and financing the operation of their local branches; the St. John Ambulance Brigade is under the supervision of the national headquarters. The chief work of the Brigade is first aid and emergency nursing.

The Canadian National Institute for the Blind.—Since its inception in 1918 the Canadian National Institute for the Blind has been dedicated to the provision of rehabilitation and social welfare services to the blind and to those with partial sight. The national office, located in Toronto, serves all provinces through its six regional divisions and 46 branches. The Institute provides both social services and financial assistance; it arranges for examinations and eye treatment services, purchases glasses for needy individuals and operates an eye bank. Under an extensive rehabilitation program, with training facilities centred in Toronto, it trains blind persons in various occupations, offers job counselling and placement services and, for those who cannot compete in industry, it provides sheltered workshops; its more than 8,000 newspaper, tobacco and confectionery concession stands are operated by blind persons. Sightless field workers bring a home training program to blind persons to help them learn Braille, typing and handicrafts, and a special program for pre-school blind children prepares them for attendance at a school for the blind. The Institute builds and maintains residential quarters and recreational facilities in all larger centres and supplies Braille books and recordings to the blind from its national library in Toronto.

The Canadian Hearing Society.—Organized in Toronto in 1940 as the National Society of the Deaf and the Hard of Hearing, the Society operates chiefly in Toronto and the surrounding area. It is concerned with the preservation of hearing, the treatment of deafness and the provision of rehabilitation services for those with impaired hearing. It provides otological examinations, counselling, vocational guidance and job placement services for the deaf or hard of hearing, and hearing aids to indigent persons.

The Canadian Mental Health Association.—The Association, organized in 1918 as the National Committee for Mental Hygiene, now has divisions in all provinces except Prince Edward Island and Newfoundland; its national office is located in Toronto. Since its inception the organization has participated directly or indirectly in almost every development in the mental health field in Canada. The Association conducts an active public education program, serves as consultant to government departments, welfare agencies and voluntary organizations, operates a teacher training program and encourages research. It is supported by voluntary donations and federal and provincial grants.

The National Cancer Institute of Canada.—The National Cancer Institute, composed of persons representing various societies and agencies concerned with cancer research and therapy, was founded in 1947 to develop a nationally co-ordinated research and professional education program. The Institute promotes fundamental research through selected projects in universities, hospitals and research centres, maintains a Canadian Tumour Registry, provides training fellowships and, in co-operation with the Canadian Medical Association and medical schools, promotes professional education on cancer topics. The Institute receives support from federal and provincial grants and an annual contribution from the Canadian Cancer Society; a special project on lung cancer has been supported by the Canadian Tobacco Industry.

The Canadian Cancer Society.—Organized in 1938 to co-ordinate voluntary activities and disseminate knowledge in the cancer field, the Canadian Cancer Society operates in all provinces and has its national office in Toronto. Its services include a

public education program, welfare services such as transportation, home nursing and cancer dressings to needy persons, and fellowships to medical graduates for advanced study in cancer. The Society also makes an annual grant to the National Cancer Institute of Canada and supports clinical research.

The Canadian Arthritis and Rheumatism Society.—Established in 1948 to promote research, professional education and treatment services in the field of rheumatism and arthritis and to disseminate factual information, the Society has branches operating in all provinces except Prince Edward Island and Newfoundland; its national office is in Toronto. Medical advisory boards in each of the eight provinces and one at the national level give advice and guidance to the provincial and national directors. The Society sponsors an educational program both for the general public and for physicians; it encourages the establishment of stationary clinics in general hospitals for the treatment of low-income patients; it pioneered in the operation of mobile clinics and now operates some seventy units to bring treatment to home-bound patients; in two provinces it supports a mobile consultative service as well as research projects in various universities and institutions; and provides clinical fellowships to physicians in all parts of Canada.

The Canadian Council for Crippled Children and Adults.—The Council was established in 1937 to co-ordinate and support activities for the care and rehabilitation of physically impaired children. The first provincial organization was formed in Ontario in 1922 and similar organizations, which have remained autonomous, now exist in all provinces except Prince Edward Island. In 1954 the services of the organization were extended to include adults. Programs in the provinces vary, ranging from the establishment of cerebral palsy clinics and the operation of summer camps for the handicapped, to payment for treatment services, prosthetics, and hospital and nursing care for needy handicapped persons. In most provinces, service clubs raise funds to support the work of the organization, particularly through the sale of Easter Seals.

The Canadian Paraplegic Association.—The Canadian Paraplegic Association, which was established in 1945 to complement the specialized treatment and rehabilitation services developed for veterans by the Department of Veterans Affairs, now includes services for civilian paraplegic cases and persons seriously handicapped by poliomyelitis and other disabling conditions. The national office of the Association and the major treatment centre, Lyndhurst Lodge, are housed in the same building in Toronto. Services include in-patient and out-patient therapy, the provision of prosthetic appliances, loans to patients, and rehabilitation services such as job counselling. Four regional divisions also have been established—the Maritime, Quebec, Central Western and Western Divisions. The Western Division is affiliated with the G. F. Strong Rehabilitation Centre.

National Heart Foundation of Canada.—The Canadian Heart Foundation, formed in 1947 by physicians to co-ordinate research and disseminate information, was replaced by the National Heart Foundation of Canada in 1956. Its membership consists of lay and medical organizations interested in promoting or assisting research on cardiovascular diseases. Its national office is in Toronto.

Multiple Sclerosis Society of Canada.—Organized in 1948 to encourage, support and co-ordinate research regarding multiple sclerosis, the Society also compiles statistics and carries on public education. The national office in Ottawa is maintained by twelve provincial and local chapters whose chief function is fund raising.

The Muscular Dystrophy Association of Canada.—This Association was organized in 1954 to stimulate and unify efforts in research into the cause, nature and cure of muscular dystrophy and to promote the establishment of facilities for diagnostic, consultative and treatment services. It has a national office in Toronto supported by nine regional chapters and its chief activity is the support of research projects in medical centres across the country.

PART IV.—VETERANS SERVICES*

The Department of Veterans Affairs administers the legislation making up the Veterans Charter, except for the Pension Act which is the responsibility of the Canadian Pension Commission. The work of the Department now consists, in the main, of: the provision of medical treatment to veterans eligible to receive it; the rehabilitation of veterans including allowances, other financial assistance, education of veterans and educational assistance for children of war dead, and general welfare services; land settlement and home construction assistance; and veterans insurance. These functions are dealt with in Sections 1 to 5 of this Chapter. Pensions payable under the Pension Act are covered in Section 6, the payment of allowances under the War Veterans Allowance Act will be found in Section 7 and Veterans Commissions and Boards are in Section 8.

The work of the Department, except as regards the Veterans' Land Act, is carried out through 17 district and five sub-district offices located across Canada and one district office in London, England. The Veterans' Land Act is administered through eight district and 32 regional offices.

Section 1.—Medical, Dental and Prosthetic Services

Medical Services.—The Department of Veterans Affairs provides medical services to entitled veterans across Canada. A chain of 11 active-treatment hospitals is maintained together with two convalescent centres and two homes for provision of domiciliary care. These institutions had a total operating capacity of 9,285 beds at Mar. 31, 1957. Special centres exist in active-treatment hospitals for the investigation and treatment of arthritis, paraplegia, tuberculosis, mental and other conditions. An additional 588 beds are available in veterans' pavilions at Ottawa, Regina and Edmonton. These pavilions are owned by the Department but are operated by the parent hospitals and partially administered by the Department. Where Departmental facilities are not available, entitled veterans may be treated at Departmental expense by their own doctor in the hospital of their choice.

Professional staffs in Departmental institutions are employed on a part-time basis and the majority are members of medical faculties, nominated for staff positions by the dean of medicine. Close co-operation is maintained with medical schools, and the hospitals in the proximity of universities are actively engaged in medical teaching. The active-treatment hospitals have received approval of the Royal College of Physicians and Surgeons of Canada for postgraduate training in internal medicine and surgery, and the majority have been approved for advanced postgraduate teaching in the various specialties.

A program of Medical Research and Education was established in 1950 and has been gradually expanded. During the fiscal year 1956-57 some 95 projects were in progress, employing 105 persons. The program is varied and deals mostly with conditions affecting the older veteran, which the Department is in a unique position to investigate. Among the problems under study may be mentioned arthritis, hypertension and allied cardiac conditions, chronic respiratory diseases and mental conditions. Five of the larger hospitals operate clinical investigation units for provision of basic facilities such as detailed metabolic studies. Radioisotope laboratories are maintained at Toronto and Montreal.

During 1956-57, 30 persons received financial assistance from a research and educational grant for attendance at various courses. Schools for the training of nursing assistants were operated at Halifax, Montreal and Toronto with a potential of 180 graduates per year. These schools provide a reservoir of trained personnel for employment in Departmental hospitals. At Mar. 31, 1957, 135 nursing assistants were in the employ of the Department.

* Prepared by the Department of Veterans Affairs, Ottawa.

An Intern-Resident Program is maintained in the active-treatment hospitals and at the end of March 1957 some 253 interns and residents were in Departmental employ. In addition, training was provided for over 130 interns in occupational therapy, physiotherapy, psychology, laboratory and medical social services. These training programs are undertaken with the close co-operation of universities.

Members of the Armed Forces, Royal Canadian Mounted Police and sick mariners receive treatment in Departmental hospitals at the request and expense of the Departments concerned. In three of the active-treatment hospitals, special Armed Forces units staffed by National Defence personnel have been established as self-contained units within the hospitals. Any veteran may receive treatment in a Departmental hospital for a non-pensioned condition upon guarantee of full cost of hospitalization. During 1956-57 over 2,600 veterans were hospitalized under this plan. Certain veterans of limited income may receive treatment for non-pensioned conditions by payment of the costs on a sliding scale according to the adjusted income. The weekly average of those making some contribution was 280. In addition, a weekly average of 180 persons received free treatment.

Minor changes in veterans' legislation have been effected during the two years ended Mar. 31, 1957. Deductions from disability pensions for veterans under treatment as in-patients were eliminated. Authority was obtained to provide treatment for those who served with the United Nations Forces, other than those of Canada, in military operations undertaken by the United Nations to restore peace in Korea. Treatment is at the request and expense of the government concerned. The amount payable for overnight lodging for patients incurring this expense, when required by the Department or the Canadian Pension Commission to report for medical examination, was increased from \$3 to \$4.

Treatment for a non-pensioned neuropsychiatric disability was authorized on a sliding scale of payment according to income, so that treatment of these conditions is no longer available under more favourable circumstances than for other non-pensioned disabilities. Authority was obtained to provide treatment for non-pensioned disabilities and domiciliary care to members of the North West Field Force with recovery on a sliding scale basis. Minor changes were effected in funeral and burial grants. Certain amounts paid to veterans were exempted as income for all purposes of the Veterans Treatment Regulations including additions to pensions for attendance under Sect. 30 of the Pension Act; allowances for wear and tear of clothing and, under War Claims Regulations, compensation for maltreatment.

Dental Services.—Dental treatment is provided for those pensioned veterans whose disability would be alleviated by such treatment, for War Veterans Allowance recipients, and for other persons whose health care is the responsibility of the Department such as Royal Canadian Mounted Police personnel and members of the Canadian Forces. Treatment is also provided at the request of other governments.

The Department employs 37 full-time dentists, one half-time dentist and two dental consultants, specialists in their fields, on a part-time basis. Twenty-six dental clinics are maintained in Departmental hospitals or centres on a full-time or part-time basis. Elsewhere, the services of private dentists on a 'fee-for-service' basis are utilized.

Since 1948, 38 training courses for dental surgeons in various specialties of dentistry have been conducted by the Department. Many Departmental dentists have given instructional clinics at various national and regional conventions, participated in the research programs of their respective hospitals, and assisted the dental colleges by part-time lecturing.

Treatments provided by the Department in 1956-57 showed a slight increase over the previous year and all clinics and dentists were working well up to capacity. There were 18,105 courses of treatment given during the fiscal year, an increase of 987 cases and an increase of 5,009 in the total number of operations.

Prosthetic Services.—The Department of Veterans Affairs provides a complete coverage of prosthetic and orthopaedic appliances and sensory aid devices to Canada's disabled veterans and other Departments of Government. The primary issue is made on medical prescription. Maintenance and renewal are carried out at District Centres. Service is given without expense to the eligible veteran. Twelve centres or shops are located in or adjacent to the Departmental hospitals in major cities from coast to coast, and six sub-centres in smaller localities. Every effort is made to maintain a high standardization of stock parts and quality of materials supplied. The largest centre, located at Sunnybrook Hospital, Toronto, manufactures stock parts and is the central stores supply. It is one of the most complete centres of its kind in existence.

A research section is maintained for the design and testing of new materials and appliances. Among new developments that might be mentioned are the plastic Syme's leg with a solid ankle and sponge rubber foot, the Canadian Hip Disarticulation leg, the development of a motorized unit designed by the National Research Council for wheel chairs for quadruplegic cases. Many items, such as cosmetic gloves, mechanical hands, various new designs of arms, drop-foot splints and foam-sponge feet for artificial legs are still in the project stage.

During the year ended Mar. 31, 1957, service was provided to approximately 70,000 patients who received 143,000 issues.

Section 2.—Rehabilitation of Veterans

The Welfare Services Branch of the Department of Veterans Affairs, in addition to administering the rehabilitation benefits still available, renders welfare assistance to veterans, their dependants, widows and orphans. Specialized services are given by the Casualty, Social Service, Older Veterans and General Services Sections. This aspect of the work requires close liaison with other government departments—federal, provincial and municipal—as well as national and local welfare and rehabilitation organizations for co-operation and prevention of duplication of services.

War Service Gratuity.—The payment of war service gratuities was discontinued after Dec. 31, 1954, for World War II veterans except for those with overseas service who satisfy the Minister that they could not apply before that date as a result of unusual circumstances. The amounts paid in gratuities up to the end of the 1954-55 fiscal year are shown in the 1956 Year Book, p. 306. Those paid in 1955-56 and 1956-57 and the cumulative totals were:—

<i>Year</i>	<i>World War II Veterans</i>	<i>Special Force Veterans</i>
	\$	\$
1955-56.....	30,536	16,932
1956-57.....	9,457	7,351
Totals to Mar. 31, 1957.....	470,012,032	6,688,822

Re-establishment Credit.—On Mar. 31, 1957, the amount of \$21,680,134 in re-establishment credit, out of nearly \$325,000,000, had not yet been authorized on behalf of the veterans entitled to claim it. These veterans have until Dec. 31, 1959, or 15 years after discharge, whichever is the later, to apply for their unused credit. The amounts paid during 1955-56 and 1956-57, and the cumulative totals to Mar. 31, 1957, by required purposes, are shown in Table 1.

1.—Re-establishment Credits Paid by Required Purpose, Years Ended Mar. 31, 1956 and 1957 with Cumulative Totals to Mar. 31, 1957

Casualty Rehabilitation.—The work of the Casualty Welfare Division continued to increase during the two years ended Mar. 31, 1957, by which date the number of disabled veterans registered had risen to 43,123, an increase of 2,454 from Mar. 31, 1955. During the 1956-57 fiscal year, 1,294 disabled veterans registered with the Division but 1,898 cases were closed, resulting in a reduction over the year of more than 600 in the number of active cases. The number of active cases at Mar. 31, 1957, was 4,257.

The function of the Casualty Welfare Division is outlined in the 1956 Year Book, p. 307. Statistics up to Mar. 31, 1957, showing the registrations by type of disability and the status at that date of those registered, are given in Table 2.

2.—Total Registrations for Casualty Rehabilitation by Type of Disability up to Mar. 31, 1957 and Status of Registrants as at Mar. 31, 1956 and 1957

Social Services.—The Social Services Division provides a “case work” service to veterans and their dependants, and a social welfare consultant service to other Departmental officials dealing with welfare matters. It maintains liaison with welfare departments at all levels of government and with private social and philanthropic agencies.

The Division has specific responsibilities in connection with the operation of the Assistance Fund, which is available to War Veterans Allowance recipients who are in need (*see below*) and, at the request of the Department of National Defence, furnishes reports on home circumstances of Armed Forces personnel who request compassionate leave, posting or discharge. The latter service provides information on which decisions may be based and may help those concerned through counselling and referral to community social services.

During the year ended Mar. 31, 1957, there were received 13,689 requests for services from all sources, a slight increase over the previous year.

Rehabilitation of Older Veterans.—During the two years ended Mar. 31, 1957, liaison was continued and extended with the Department of Labour, National Employment Service, Canadian Corps of Commissioners, Canadian Legion and other public and private organizations through which older veterans and their dependants are assisted to find employment matched to their physical and mental abilities. Assistance was also provided to the Canadian Welfare Council, universities and other bodies in their efforts to study and publicize the problems and needs of those who, on account of age, often coupled with physical, mental or economic handicaps, need help in obtaining or retaining suitable employment.

The Welfare Services Division continued to review all rejected applications for War Veterans Allowance to ensure that any alternative services, for which the applicant may be eligible, are brought to the attention of the veteran or widow.

At Mar. 31, 1957, there were 10,589 World War I and dual-service veterans registered for employment with the National Employment Service, a decrease of 653 over the previous year. At the same date there were 4,869 veterans employed in the Corps of Commissioners, 2,410 by the Federal Government and 2,459 with provincial and municipal government and private organizations.

Assistance Fund.—Supplementary financial assistance is provided by the Assistance Fund to recipients under the War Veterans Allowance Act (*see p. 304*) who are in need. Assistance may be given as a continuing monthly grant in accordance with a formula which includes costs of shelter, fuel, food, clothing, personal care and certain health needs, or in single grants to meet needs not covered by the formula. During the two years ended Mar. 31, 1957, the maximum assistance available from the Fund was \$120 and \$144 per annum respectively to single and married recipients of WVA. However, these amounts were increased to \$240 and \$180 per year respectively as a result of the increases in rates and ceilings of the WVA Act which became effective on July 1, 1957.

Field work for the fund is done almost entirely by the Welfare Services Branch which, through counselling and referral, also assists applicants in other ways. Since a monthly Assistance Fund grant can be continued without interruption until there is a change in the recipient's financial circumstances the number of people assisted in any fiscal year is greater than the number applying during that period. A statistical summary of Fund activity during the years ended Mar. 31, 1956 and 1957 is as follows:—

<i>Item</i>	<i>Mar. 31, 1956</i>	<i>Mar. 31, 1957</i>
Persons assisted.....No.	6,256	8,331
Persons applying during year....."	3,847	4,765

Proportion of applicants assisted.....p.c.	80	90
Fund expenditures during year.....\$	509,624	741,895
Proportion of expenditures given in monthly grants.....p.c.	78	78
Persons in receipt of continuing monthly grants:.....No.	4,058	5,949

Education and Training.—By the end of March 1957, very few veterans were still eligible for training under the Veterans Rehabilitation Act and the Veterans Benefit Act, 1954. Still eligible were a few with service in the Korean theatre who had not been released from the Armed Forces, and those seriously disabled veterans whose rehabilitation could be assisted by training or retraining.

At Mar. 31, 1957, there were 119 World War II veterans and 42 of the Korean Operation taking university courses, and 65 and 44 respectively receiving vocational training.

Pensioned veterans of World War I and ex-members of the Regular and Reserve Forces who are also in receipt of pensions may be given training under the Pensioners Training Regulations if required to fit them for suitable employment. At the end of the 1956-57 fiscal year, eight such pensioners were taking university courses and 10 were receiving vocational training.

Children of deceased veterans are also eligible for training, under the terms of the Children of War Dead (Education Assistance) Act, if the Canadian Pension Commission has ruled that the deaths were attributable to war service and if, at some time, a pension has been paid on behalf of the children concerned. Assistance for an approved student consists of a training allowance of \$25 per month while in attendance at a training institution, and prescribed fees not exceeding \$500 for each academic year.

Awaiting Returns Allowance.—Only veterans who are settled under the Veterans' Land Act as full-time farmers or commercial fishermen are still eligible for awaiting returns allowances, which are \$50 per month for a single veteran and \$70 for a man and wife plus allowances for children. The allowance must be applied for within the year following settlement under VLA. Its purpose is to provide maintenance for the veteran and his family until an income has been developed from the farming or fishing venture and, in any event, it may not be continued for more than 12 months.

Up to Mar. 31, 1957, 62,732 veterans, including 55 ex-members of the Special Force, were approved for these allowances and 91 p.c. of them were discontinued as established. The total amount expended for this allowance from inception to the end of the 1956-57 fiscal year was \$27,129,445. At Mar. 31, 1957 there were 222 active cases.

Vetcraft Shops.—Vetcraft Shops manufacture poppies and wreaths to be distributed and sold by the Canadian Legion for Remembrance Day, thus providing sheltered employment to some 41 veterans as poppy workers and some 32 dependants as home workers on piece-work rates. Shops are operated at Toronto and Montreal with additional home assembly work being carried out at Winnipeg, Regina and Calgary. Some 6,300,000 poppies and 58,000 wreaths of a floracraft type were manufactured for the 1956 campaign.

Section 3.—Life Insurance

Returned Soldiers' Insurance.—This insurance, issued under the authority of the Returned Soldiers' Insurance Act, was available to veterans of World War I. No applications were accepted after Aug. 31, 1933. A brief summary of Returned Soldiers' Insurance appears in the 1956 Year Book.

On Mar. 31, 1957, of the total of 48,319 policies issued there remained 11,322 policies in force for a face amount of \$23,864,638. Of these policies 3,259 were premium-paying, 7,135 were paid-up, 153 had been converted to Extended Term Insurance, and 775 were being covered under the disability provision of the policy contracts. Terminations from 1920 to 1957 totalled 36,997, of which 11,469 were by death, 16,642 by surrender for the cash value and 8,886 by lapse, expiry, or other mode of termination.

Veterans Insurance.—Veterans Insurance was available to veterans of World War II and of the Korean action. A brief summary of Veterans Insurance appears in the 1956 Year Book. As the period of eligibility to contract for this insurance for World War II veterans expired (except for veterans who still have unused Re-establishment Credit) ten years after their discharge, comparatively few of these veterans are now eligible. Korean veterans may contract for the insurance until Oct. 31, 1958.

The legislation has permitted acceptance of a markedly high proportion of the applications received, fewer than two per 1,000 having been declined. Of the 41,824 policies issued only 4.2 p.c. have lapsed during the first two policy years, an unusually low ratio. At the

end of March 1957, there were 29,655 policies in force with a face value of \$90,045,191. The death claim experience has followed a consistent pattern and is closely related to that observed for the general population.

3.—Death Claims Intimated, Years Ended Mar. 31, 1946-57 with Cumulative Totals 1921-45

Section 4.—Land Settlement and Home Construction

Veterans' Land Act.—The Veterans' Land Act Branch is organized into eight Districts comprising 32 Regional Offices and 243 field areas across Canada. A resident Field Supervisor is responsible for each area and each Supervisor has an average of 250 active accounts involving a gross initial public investment of close to \$1,500,000. Each Field Supervisor is responsible for the sound appraisal of properties and the implementing of the Branch's supervised credit program through which veterans are assisted in the organization and management of their farms.

There are also 93 Construction Supervisors throughout the country whose main duties consist of giving practical advice to veteran-builders and supervising the actual construction, remodelling or extension of homes and other buildings. A continuous and progressive on-the-job program of staff training is conducted to ensure that the Supervisors keep abreast of the latest developments and newest techniques in land appraisal, farm organization, farm management and construction.

During the two years ended Mar. 31, 1957, \$23,963,805 became due under Veterans' Land Act contracts with veterans who paid, including pre-payments, \$24,142,354. As a further indication of the effectiveness of the supervised credit program of the Branch, less than 2 p.c. of the active accounts had arrears in excess of \$200, if on annual or semi-annual payments, or \$100 if paying monthly.

Nearly 22,000 settlers are using pre-arranged systems of making payments, 14,359 of whom are using post-dated cheque plans. A further 6,376 have given orders on pensions or have made salary assignments and, at the end of March 1957, there were 1,134 share-of-crop agreements in effect in the spring wheat areas of the Prairie Provinces. In addition, 2,610 veterans have completely repaid their contract debts.

The settlement of veterans of World War II and the Special Force under the Veterans' Land Act falls within four broad categories: farming or fishing as a full-time occupation; part-time farming in rural or semi-rural areas to supplement income from other employment; settlement, in general, on pioneer land under agreements between the Federal Government and the provinces; and home building on city-sized lots by veterans who have been approved for a loan under the National Housing Act and who act as their own contractors.

The amounts of financial assistance and the repayment terms differ for the various types of settlement. A veteran being settled as a full-time farmer on other than provincial land may obtain financial assistance under Part I of the Act to a maximum of \$6,000 including \$1,200 for livestock and farm equipment, and \$3,000 under Part III of the Act.

Of the amount approved under Part I, exclusive of that for livestock and farm equipment, 10 p.c. is repayable as a down payment and 66 $\frac{2}{3}$ p.c. is repayable with interest at 3 $\frac{1}{2}$ p.c. over a maximum period of 25 years. Assistance under Part III is available on the basis of the veteran making a contribution of \$1 in cash or equivalent value for each \$2 loaned with the amount loaned fully repayable with interest at the rate of 5 p.c.

Part-time farmers and commercial fishermen may obtain financial assistance up to \$6,000 under Part I and \$1,400 under Part III. The amounts repayable and the interest rates are similar to those for full-time farmers.

Veterans being settled on federal or provincial lands and Indian veterans being settled on Indian reserves may obtain a grant of \$2,320 which is non-repayable provided they meet settlement terms and conditions for a period of 10 years.

Under Part II of the Act any qualified veteran, who has been approved for a loan under the National Housing Act may receive financial and other assistance to build his own home on any lot suitable for a single family dwelling. The maximum financial assistance available is \$8,000 which is repayable under a mortgage contract at the rate of interest chargeable under the National Housing Act.

At the end of March 1957, a total of \$382,792,157 had been expended on behalf of 75,356 veterans. There were 60,981 of the accounts still active at Mar. 31, 1957, including 1,500 Indian veterans settled on Indian reserves whose accounts are administered by the Department of Citizenship and Immigration. During the fiscal year 1956-57 approvals for assistance were made on behalf of 2,815 veterans of World War II and the Special Force including 526 for full-time farming; 1,867 for part-time farming; 25 for commercial fishing; 37 for settlement on Indian reserves; and 396 for home building on city-size lots. There were also 698 additional loans made to established full-time farmers under the provisions of Part III of the Act. These approvals involved the expenditure of approximately \$21,000,000 of public funds.

To Mar. 31, 1957, a total of 21,538 houses had been completed and another 1,838 were under construction. The 1,697 houses completed in 1956-57 was the highest total for any year since 1951-52. There were 1,397 new houses started during the year and another 946 veterans received approval to effect additions or improvements to their homes and other buildings.

A total of 10,367 veterans had earned their conditional grants as of Mar. 31, 1957, of which number 8,722 were earned in the fiscal year 1956-57. Titles to properties or chattels, or both, have been received by 3,473 of these veterans.

4.—Summary of Settlement Status, Loans and Grants under the Veterans' Land Act as at Mar. 31, 1957¹

Section 5.—Pensions Advocates

Veterans Bureau.—The Veterans Bureau, which has completed its twenty-sixth year of operation, is a branch of the Department of Veterans Affairs and has an office under the direction of a District Pensions Advocate in all districts in Canada in which offices of the Department are situated.

During the year ended Mar. 31, 1957, 5,861 claims were submitted to the Pension Commission, with 8,103 in preparation at the end of the year. These figures showed little change from the 5,833 claims submitted during the previous fiscal year and 8,276 in preparation at the end of that year.

The duties of Pensions Advocates, most of whom are lawyers, are to assist former members of the Armed Forces and their dependants and former members of the various auxiliary organizations, such as merchant seamen, firefighters and others, in preparing and submitting claims to the Canadian Pension Commission. They also appear as counsel for applicants before the Appeal Boards of the Commission. No charge is made for the services of the Bureau.

Section 6.—Veterans Pensions

Previous issues of the Year Book contain information on the development of Canadian pension legislation, together with yearly statistics of numbers and liabilities. In the 1956 edition, pension data is given on pp. 304-305.

On Mar. 14, 1957, the Minister of Finance, in his Budget Speech, announced an upward revision in the basic scale of pensions under the Pension Act and an increase in the maximum helplessness allowance payable under the Act, to become effective July 1, 1957. This revision was given Parliamentary sanction in April 1957. It represents the third increase in basic pensions in the past ten years, the current rates being exactly double those which were in effect from 1920 to 1947. Over 159,000 disability pensioners benefited from the increases at an estimated increase in annual liability of \$15,150,248. Additionally, the estimated increase in annual liability for dependants, widows and parents, will be \$4,647,259.

The following gives a comparison of the new rates with those formerly in effect:—

Item	Former Monthly Rate	Monthly Rate Effective July 1, 1957
	\$	\$
Single pensioner, 100 p.c. disability.....	125	150
Married pensioner, 100 p.c. disability.....	170	200
Pensioned widow.....	100	115
Dependent parent, maximum award.....	75	90
Two dependent parents, maximum award.....	100	115

The new rates result in the basic scale being the same for all ranks up to and including Lieutenant-Colonel and equivalent ranks. Slightly higher rates are provided for Colonel and higher ranks and, although these were not increased, a married disability pensioner who held one of these ranks will benefit by the increase in additional pension for a wife, which is the same for all ranks.

The rates for children were not increased and for 100 p.c. disability pensioners (all ranks) they are \$20 a month for the first child, \$15 a month for the second child and \$12 a month for the third and any subsequent children.

Helplessness allowance, which is payable to a pensioner who is totally disabled and in need of attendance and which varies depending on the amount of attendance required, is paid in addition to pension. The maximum has been increased from \$1,400 to \$1,800 per annum.

The widow of a Lieutenant-Colonel or lower rank is now entitled to \$115 a month for herself and monthly payments of \$40 for the first child, \$30 for the second child and \$24 for the third and any subsequent children.

While the rates of pension for disability and pensioned widows are statutory and adjustments were made by Treasury Branch without reference to the Canadian Pension Commission, amounts payable to parents and in respect of helplessness are not fixed and a review of many thousands of cases was necessitated.

The Civilian War Pensions and Allowances Act.—This Act provides for the payment of pensions to, or on behalf of, persons who served in certain civilian groups that were closely associated with the World War II war effort, and who suffered injury or death as a result of such service. Among these groups are merchant seamen, salt-water fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, fighters who served in the United Kingdom, etc.

6.—Pensions in Force under the Pension Act as at Mar. 31, 1957

Service	Disability		Dependant		Disability and Dependant	
	Pensions in Force	Liability	Pensions in Force	Liability	Pensions in Force	Liability
	No.	\$	No.	\$	No.	\$

Section 7.—War Veterans Allowances

War Veterans Allowances are payable, in Canada only, to Canadian veterans of the Northwest Field Force, the South African War, World Wars I and II and the Korean Operation; and to veterans of Commonwealth and Allied forces who were domiciled in Canada at time of enlistment or, alternatively, have resided in Canada for 20 years. Allowances may also be paid to widows or orphans of eligible veterans. To be eligible for an allowance, a veteran must have served in both World Wars I and II and have been honourably discharged. Allowances are awarded subject to certain financial limitations to those whose age or physical and mental conditions meet the requirements of the Act.

The development of these allowances is reported in previous issues of the Year Book and the main provisions of the present Act are outlined in the 1956 edition at pp. 313-314.

While no changes* have since been made in the Act, provision was included in the Budget of Mar. 14, 1957, for increased rates and ceilings to be effective on July 1, 1957. On that date the maximum rates and annual income ceilings became:—

<i>Recipient</i>	<i>Monthly Maximum Allowance</i>	<i>Annual Income Ceiling</i>
	<i>\$</i>	<i>\$</i>
Veterans and widow(er)s, single status	60	960
Veterans and widow(er)s, married status	120	1,620
Veterans with blind spouse	120	1,740
One orphan	40	720
Two orphans of one veteran	70	1,200
Three or more orphans of one veteran	85	1,440

At the time these changes were announced, it was estimated that the increase would add nearly \$6,000,000 to the annual liability for the allowances.

The number of veterans and others in receipt of allowances at the close of each of the fiscal years 1952-57, and the amounts of allowances paid, are as follows:—

<i>As at Mar. 31—</i>	<i>Veterans in Receipt of Allowances</i>	<i>Others in Receipt of Allowances</i>	<i>Total in Receipt of Allowances</i>	<i>Expenditures</i>
	<i>No.</i>	<i>No.</i>	<i>No.</i>	<i>\$</i>
1952	29,137	9,602	38,739	23,544,760
1953	30,005	10,607	40,612	27,114,849
1954	30,650	11,737	42,387	26,486,988
1955	32,471	12,883	45,354	27,702,077
1956	37,907	14,347	52,254	39,074,156
1957	39,664	15,578	55,242	41,259,185

During the year ended Mar. 31, 1957, 56,165 cases were reviewed by the 18 District Authorities across Canada, and 16,160 by the War Veterans Allowance Board at Ottawa (see below), so that changes in the financial, physical or domestic circumstances of the recipients concerned might be reflected in the allowances being paid. Of the 412 decisions appealed during the year, 32 were allowed and 380 were disallowed.

Section 8.—Veterans Commissions and Boards

Canadian Pension Commission.—The Canadian Pension Commission is a statutory body charged with the administration of the Pension Act and the Civilian War Pensions and Allowances Act. The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs.

It is the responsibility of the Commission to adjudicate on claims for injury or disease resulting in disability or death, incurred during service with the Canadian Navy, Army or Air Force during war or peacetime. The Commission may also supplement certain awards of pension made by the British or Allied Governments (see 1956 Year Book, p. 304).

The Commission's representatives across Canada are called Pension Medical Examiners and they are located in most of the district offices of the Department of Veterans Affairs.

War Veterans Allowance Board.—The War Veterans Allowance Board is a statutory body set up to administer the War Veterans Allowance Act. The members are appointed by the Governor in Council and the Board reports to Parliament through the Minister of Veterans Affairs. Administration of the Act is decentralized across Canada through 18 District Authorities located in the district offices of the Department of Veterans Affairs.

* Effective Nov. 1, 1957, the Act was further amended by increasing the single rate to \$70 per month and by raising the annual income ceilings to \$1,080 for single recipients and \$1,740 for those who are married. Some changes were made also in the eligibility requirements with the result that additional groups of veterans and dependants may now be awarded allowances.

Much of the information on which decisions on applications for allowances are based is provided through investigations carried out by officers of the Veterans Welfare Services Branch.

In addition to defining policy, the Board adjudicates on appeals from decisions of the District Authorities and periodically reviews, on its own initiative, decisions of these Authorities.

Imperial War Graves Commission.—All Commonwealth Governments are members of the Commission, incorporated by Royal Charter in 1917, and are represented by their High Commissioners in London. The Commission is entrusted with the marking and maintenance, in perpetuity, of the graves of those of the British Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921, and between Sept. 3, 1939 and Dec. 31, 1947. The Commission erects memorials to commemorate those in unknown graves.

The Minister of Veterans Affairs is the Agent of the Commission in Canada and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

The area of responsibility of the Canadian Agency is the Continent of North America but it has also certain duties of inspection in Argentina, Bahamas, Barbados, Bermuda, Brazil, British Guiana, British Honduras, Chile, Costa Rica, Cuba, Falkland Islands, French West Indies, Guatemala, Hawaiian Islands, Jamaica, Leeward Islands, Netherlands Antilles, Panama Canal Zone, Peru, Puerto Rico, Trinidad, Uruguay, and Windward Islands.

In North America the Agency is responsible for about 13,000 War Graves in over 2,000 cemeteries. Approximately 3,400 servicemen of both wars, missing in operations while based in North America, are commemorated on the memorials erected at Victoria, B.C., and at Halifax, N.S.

It is expected that construction will be started early in 1958 on a memorial in Ottawa commemorating by name approximately 850 Commonwealth Air Forces servicemen who lost their lives in the Second World War while on operations from bases in Canada and the United States, and who have no known grave.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages, and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and

* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Prepared by the Criminal Law Section, Department of Justice, Ottawa.

organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however, (Sect. 101) establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931, effected important changes particularly by abrogating the Colonial Laws Validity Act, 1865 (U.K.), and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciaries are given in Chapter II, pp. 42-43 and provincial judiciaries are dealt with briefly at pp. 43-44; more detailed information on provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869 in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbidge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Opium and Narcotic Drug Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and criminal sexual psychopaths partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally passed on June 15, 1954, and the new Criminal Code (2-3 Eliz. II, c. 51) came into effect on Apr. 1, 1955. A short outline of the system that existed under the repealed Code together with the major revisions effected by the new Code is given in the 1955 Year Book, pp. 295-298.

Since the Code came into force amendments have been few and of minor importance. An amendment relating to race meetings was passed in 1955 and in 1956 it was provided that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of the judges of that Court instead of by a single judge.

* Salmond on *Jurisprudence*, 7th Edition, p. 496.

Section 2.—Adult Offenders and Convictions

The main interest in criminal statistics is concerned with those persons guilty of the more serious crimes. Such offenders are fewer than those who commit summary conviction offences but, from the standpoint of the protection of society, they are more important.

In 1949 the basis of the statistics of indictable crimes was changed from *convictions* to *persons* so that the figures for 1949 and subsequent years are not comparable with those for previous years. Where any person is prosecuted at the same hearing for several offences, one offence must be selected for tabulation. The rule followed is to select that for which the proceedings were carried to the furthest stage—to conviction and sentence if the prisoner were tried on several charges; if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; if the final result of proceedings on two or more charges were the same, the most serious offence (as measured by the maximum penalty allowed by the law) appears in the tables. Where a person was prosecuted for one offence and convicted of another (e.g., charged with murder and convicted of manslaughter), the case appears only under the offence for which he was convicted.

In the case of summary conviction offences the figures continue to be based on convictions and are thus comparable with those for earlier years.

Statistics include only cases finally determined within the year. Cases not entirely disposed of within the year (e.g., tried but sentence postponed) are held over for the next year's report.

Subsection 1.—Adults Convicted of Indictable Offences

During 1955 the courts of Canada dealt with 32,367 adults charged with 54,252 indictable crimes, of whom 28,273 were found guilty of 46,239 offences. These figures show little change from those of 1954 when 35,278 adults were charged with 56,847 indictable crimes and 30,848 were found guilty of 47,981 offences.

1.—Adults Convicted of Indictable Offences and Ratio per 10,000 Population 16 Years of Age or Over, by Province 1954 and 1955

¹ Per 10,000 population 16 years of age or over excluding the Yukon and Northwest Territories.

Indictable offences are grouped into six classes as shown in Table 2. In 1955 persons convicted of assaults of various kinds and obstructing police represented 79.4 p.c. of Class I, which covers crimes against the person. In that year 16 persons were convicted of murder, 7 of attempted murder and 43 of manslaughter as compared with 15, 4 and 81 respectively in 1954.

Classes II to V cover offences against property. Thieves predominate among the offenders in these classes, and burglars and robbers whose serious crimes involve acts of violence are the next most numerous. In Class VI which includes miscellaneous offences the most numerous convictions are for offences connected with the improper operation of motor vehicles. In 1955 there were 349 offenders under the Opium and Narcotic Drug Act, of whom 242 were convicted of possessing heroin, 249 were males and 308 were born in Canada. British Columbia courts convicted 59.3 p.c. of the drug offenders and Ontario courts 23.2 p.c.

2.—Adults Charged and Convicted of Indictable Offences by Class of Offence 1954 and 1955

¹ Includes abortion, assault against females or wife, indecent assault, carnal knowledge, incest, procuration, rape, attempted rape and seduction.

Table 3 shows that, in 1955, 56.9 p.c. of the persons convicted of indictable offences had not gone beyond elementary school grades in education, 40.4 p.c. were 24 years of age or younger, 11.2 p.c. were 45 years of age or over, and 74.5 p.c. lived in urban centres. Of these offenders 94.0 p.c. were males, 89.7 p.c. were born in Canada, 54.7 p.c. were unmarried, 23.5 p.c. were recorded as labourers and 7.5 p.c. had no remunerative employment. These percentages have changed very little in recent years.

Female Offenders.—There were 1,705 female offenders convicted of indictable offences in 1955, 39.1 p.c. of whom were in Ontario and 21.1 p.c. in Quebec. Of the total convicted in that year 43.1 p.c. were found guilty of theft and receiving stolen goods and 9.1 p.c. were committed for assault. Three women were convicted of manslaughter.

4.—Females Convicted of Indictable Offences by Province 1954 and 1955

Disposition of Cases and Recidivism.—Of all suspects before the courts for indictable crimes in 1955, 87.4 p.c. were adjudged guilty; the convictions against males (87.8 p.c.) constituted a higher percentage than those against females (81.0 p.c.) and varied considerably between provinces. Prince Edward Island showed the highest percentage (99.2 p.c.) of convictions and Nova Scotia the lowest (79.8 p.c.).

Sentences.—In 1955, 32.9 p.c. of the persons convicted of indictable crimes were fined, 33.4 p.c. were sent to gaol without option of fine, 6.0 p.c. were committed to reformatories and 7.4 p.c. to penitentiaries, and 20.3 p.c. were given suspended sentences or put on probation. Eight habitual criminals were given preventive detention, four persons received life sentences and 16 were given the death penalty. The proportions in 1955 were much the same as in recent preceding years.

Court Proceedings.—In 1955, 66.4 p.c. of the persons tried by jury were convicted; speedy trials (by court after waiver of jury trial) brought convictions in 77.1 p.c. of the cases so tried and summary trials by magistrates ended in convictions in 88.4 p.c. of the cases. Of persons charged on indictment 93.5 p.c. were tried by magistrate or family and juvenile court judge, 3.5 p.c. in county and district courts and 3.0 p.c. in higher courts.

Subsection 2.—Young Adult Offenders (16-24 Years)

Young men and women from 16 to 24 years of age each year form about 43.0 p.c. of the criminal population who commit indictable offences but they comprise less than 19.5 p.c. of the total population 16 years of age or over. As this age group includes some of the most daring offenders who may be already experienced criminals as well as first offenders likely to be turned from crime by further education and training, it seems worth while to give consideration to offenders in this group as distinct from offenders in the older age groups.

Of the young offenders in 1955, 70.7 p.c. were tried in three provinces—Ontario 37.9 p.c., Quebec 22.4 p.c., and British Columbia 10.4 p.c.; 48.6 p.c. of them were still under 20 years of age.

Totals, 1955	268	54	674	281	2,567	4,338	612	524	925	1,192	1	11,436

In 1955, 12 of the 40 men found guilty of manslaughter and 24 of the 47 convicted of rape were under 25 years of age; 62.2 p.c. of the men found guilty of burglary and robbery were in that group as well as 46.6 p.c. of those convicted of offences against property without violence, which includes all thefts, 47.6 p.c. of those who maliciously damaged property, 40.5 p.c. of those found carrying offensive weapons and 57.5 p.c. of the prison escapees.

There were 1,705 women offenders in 1955, 627 of them under 25 years of age; nearly half (310) of the young offenders were guilty of theft and receiving stolen goods. Of the 100 women convicted under the Opium and Narcotic Drug Act, 30 were in the young adult group as were 33 of the 65 found guilty of forgery and uttering; 17 of the 22 female prison escapees were also young women.

¹ Includes abortion, assault against females, assault against wife, indecent assault, carnal knowledge, incest, procuration, rape, attempted rape, seduction and wife desertion.

Table 13 shows the proportions of young offenders per 100,000 population in three age groups.

13.—Numbers per 100,000 Population of Young Adults Convicted of Indictable Offences by Age Group 1954 and 1955

Age Group	1954			1955		
	Offenders	Per 100,000 Population in Respective Group	Change from Preceding Year	Offenders	Per 100,000 Population in Respective Group	Change from Preceding Year
	No.		p.c.	No.		p.c.
16 - 17 years.....	2,769	622	+3.1	2,743	602	-0.9
18 - 19 ".....	2,778	637	+5.7	2,814	636	+1.3
20 - 24 ".....	6,660	598	+2.2	5,879	524	-11.7

The sentences meted out to these young people vary somewhat from those given to offenders over 24 years of age. Usually a higher proportion of them are given suspended sentences, put on probation or sent to reformatories and a lower proportion fined or given gaol sentences.

14.—Disposition of Sentences for Indictable Offences by Sex 1954 and 1955

Disposition of Sentences	1954				1955			
	16-24 Years		25 Years or Over		16-24 Years		25 Years or Over	
	M.	F.	M.	F.	M.	F.	M.	F.
	No.	No.	No.	No.	No.	No.	No.	No.
Suspended sentence.....	1,389	143	1,435	210	1,521	136	1,428	186
Probation.....	1,408	143	731	144	1,529	169	649	120
Fine.....	2,865	140	7,118	448	2,530	99	6,285	398

Penitentiary.....	909	9	1,418	25	783	8	1,259	34
Death.....	4	—	11	—	8	—	7	1

Through the system of suspended sentence and probation supervising, many young offenders receive another chance to make good and reformatory training gives others an opportunity to better their employment possibilities. It is interesting to note that 29.8 p.c. of the young male offenders in 1955 were recorded as labourers, indicating that they had no particular skill by which to earn a living; the proportion of male offenders 25 years or

over recorded as labourers was 22.4 p.c. Those recorded as students made up 5.9 p.c. of the youths and 8.0 p.c. were reported as unemployed as compared with 3.0 p.c. of the older men. Approximately two of every three lived in urban centres.

Subsection 3.—Convictions for Summary Conviction Offences

Offences punishable on summary conviction—those not expressly made indictable—include all offences against provincial statutes and municipal by-laws. Summary conviction offences are triable by magistrate or justice of the peace under Part XXIV of the Criminal Code or under the provincial summary convictions Acts.

It is debatable how far summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort as, for example, parking violations or practising trades without licence, but they do not involve violence, cruelty or serious dishonesty. On the other hand, offences as serious as cruelty to animals and contributing to juvenile delinquency are included under this classification and such indictable offences as common assault and driving with ability impaired may be tried on summary conviction.

Summary convictions increased by 8.6 p.c. to 2,147,776 in 1955 from 1,977,567 in 1954. Increases were general in all provinces except Manitoba.

15.—Convictions for Summary Conviction Offences by Province 1946-55

NOTE.—Figures for years before 1951 are for the 12 months ended Sept. 30, 1951; those for 1952-55 are for the calendar year. Statistics for the intervening months, October-December 1950, are given in DBS report, *Statistics of Criminal and Other Offences*. Figures for 1900-45 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

Year	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon	N.W.T.	Canada

In considering statistics of summary convictions it should be remembered that such convictions are greatly influenced by the customs of the people and by the application and degree of enforcement of municipal regulations. These differ from place to place and from year to year and affect summary conviction offences more than they do indictable offences.

In 1955 increases appeared in convictions for breaches of municipal by-laws, the Lord's Day Act, the Indian Act and traffic regulations, and for frequenting bawdy houses, common assault, contributing to delinquency and non-support and neglect of children. Decreases were shown for offences against the Railway Act and the Liquor Control Act and for vagrancy, damage to property, disturbing the peace and gambling.

16.—Convictions for Summary Conviction Offences by Type 1951-55

NOTE.—See headnote to Table 15, p. 320.

Type of Offence	1951	1952	1953	1954	1955	Increase or Decrease 1954-55

For the year 1955, Ontario, with 41.0 p.c. of the registrations of motor vehicles in Canada, had 60.0 p.c. of the total convictions for breaches of traffic regulations; Quebec in the same year had 18.8 p.c. of the registered vehicles and 21.2 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. These two provinces have large urban centres but in provinces with lower degrees of urbanization, such as the Atlantic Provinces, Saskatchewan and Alberta, convictions are lower when considered in proportion to the number of motor vehicles registered.

Convictions for Drunkenness and Offences against the Liquor Acts.—In considering these convictions it should be noted that the same person may and often does appear before the courts on such charges more than once within a year and that the number of convictions may thus be well above the number of persons convicted.

18.—Convictions for Drunkenness by Province 1946-55

NOTE.—See headnote to Table 15, p. 320.

There is general interest in the relation of alcoholism to crime but, when examining statistics to support the assumption that some crimes are associated with the consumption of liquor, it should be observed that accurate interpretation would necessitate allowance for population variables such as age and sex distribution and other classifications according to social and economic status, etc.

Convictions of Females.—The number of convictions against females for summary conviction offences was higher in 1955 than in 1954 by 12.2 p.c., an increase more than accounted for by a 22.0 p.c. advance in Ontario. New Brunswick, British Columbia, Nova Scotia, Quebec and Alberta recorded percentage decreases of 25.1, 19.6, 6.6, 4.8 and 1.5 respectively. Traffic offences were the cause of 82.1 p.c. of all summary convictions against women, in 1955 such convictions increased by 14.6 p.c. as compared with 1954.

20.—Convictions of Females for Summary Conviction Offences by Province 1951-55

Section 3.—Juvenile Delinquents

The Juvenile Delinquents Act defines a child as "any boy or girl apparently or actually under the age of 16 years". Provision is made, however, by which the Governor General in Council may proclaim that in a province the definition of a child be a "person under the age of 18 years". This has been done in British Columbia, Manitoba and Quebec. Newfoundland considers a juvenile to be a girl or a boy of under 17 years of age. For uniformity the figures relating to juveniles compiled by the Dominion Bureau of Statistics refer to the younger ages of under 16 years only and deal primarily with cases disposed of by the courts.

The fact that juvenile court statistics furnish the most comprehensive figures collected on a countrywide basis makes it important that their possibilities and limitations be understood. This Section gives an account of juvenile delinquency in Canada from the viewpoint of legal action taken, for in the eyes of the law a *child is a delinquent only when he or she is adjudged before the court to have committed a delinquency*. To many people the term 'juvenile delinquent' has a broader interpretation but that adopted in this Section does not include those boys and girls whose misdemeanours have not been reported to the courts nor those given the necessary advice and aid from their parents, their school, the police or a child care agency. Moreover it does not include those cases that are handled unofficially by the court, where the judge or probation officer makes an adjustment without filing a legal record of the offence. The tendency to follow this practice and thus keep children's names from court records is growing and may account to some extent for the decreasing number of recorded court cases.

These statistics represent cases of delinquency reported to the courts, from the most trivial infractions to the most serious, that of murder. The number of cases brought before the courts is influenced by such factors as personnel and facilities of the court, community

interest in and understanding of the function of a juvenile court, and by variations in the policies of the courts in the disposition of cases. As more courts are established the additional returns may exaggerate an apparent increase in delinquency or may underestimate a decrease. In some communities the juvenile court is the only available agency to provide services to children; in others there are well established agencies serving children of which the juvenile court is only one.

It should be noted, too, that the total figures do not represent the actual number of children charged and found guilty but rather tend to exaggerate them, for a child referred to the court two or more times during the year for different offences is counted as a different case each time. Neither do the figures represent the number of offences committed by offenders, as when a child is charged with more than one delinquency at a hearing only the most serious offence is counted.

Reports of juvenile delinquents were received in 1955 from 157 of the 169 judicial districts. Twelve of these had no cases to report. Separate reports were received in 1955 from 159 incorporated urban centres of 4,000 population or more.

Juveniles Before the Courts.—The number of cases of juveniles brought before the courts in 1955 was 8,187, an increase of 5.6 p.c. over 1954. Newfoundland and Alberta showed the greatest percentage increases among the provinces.

Children Adjudged Delinquent.—Over a period of ten years it has been found that between 80 and 90 p.c. of the children brought before the courts each year have been adjudged delinquent. The number of delinquents in 1955 was 7,025, an increase of 10.9 p.c. over 1954. The major increases in 1955 were shown in Quebec and Alberta.

Offences.—Thieving is the most prevalent delinquency among boys and, together with receiving stolen goods, was the reason for court appearance in 40.4 p.c. of all cases in 1955. Burglaries, robberies, house- and shop-breaking were committed by 24.5 p.c. of the delinquent boys and another 9.7 p.c. committed wilful acts against property. Only 2.7 p.c. of the boys were guilty of offences against the person and 36.7 p.c. of these were charged with common assault.

Incorrigibility (25.4 p.c.) and thefts (19.9 p.c.) were the complaints against 45.3 p.c. of the delinquent girls in 1955.

Sex and Age.—Juvenile delinquents are predominantly boys. The proportion for all offences in 1955 was approximately one girl to eight boys, a ratio which has remained much the same over a long period. Juveniles of 13 to 15 years of age comprised the majority of delinquents in 1955, 73.8 p.c. in the case of boys and 87.7 p.c. in the case of girls. However, 242 boys and 12 girls (3.6 p.c. of the children) were under 10 years of age.

28.—Percentages of Delinquent Boys and Girls by Age Group 1954 and 1955

Age Group	1954			1955

13 - 15 years.....	72.4	88.3	74.0	73.8	87.7	75.4
Not given.....	0.7	0.5	0.7	0.7	0.8	0.8
Totals.....	100.0	100.0	100.0	100.0	100.0	100.0

Education and Employment.—Many causes contribute to backwardness in school work. The retarding influence may be illness, over-crowding in the home, disturbed family situations or dull mentality. Presuming that six years is the usual age for entering Grade I, 46.8 p.c. of the boys and girls in 1955 were reported to be two or more years below the normal grade for their age and 4.0 p.c. of the boys and girls were a year or more above it.

Well over half of the boys had attained Grade VII and 44.2 p.c. of the girls Grade VIII at the time of delinquency. The majority of boys who had left school had reached Grades VI to VIII and the girls, Grades VII to IX. Some high school education had been achieved by 20.5 p.c. of the boys and girls.

In 1955, 9.8 p.c. of the delinquent boys and 17.5 p.c. of the delinquent girls were not attending school. At the time of leaving school their ages ranged from 10 to 15 years, the majority being between 14 and 15 years. Nearly 32 p.c. of the delinquent boys, having left school, were unemployed. The largest group of wage earners (86) were in occupations concerned with transportation, such as messengers, helpers on milk delivery routes, truck drivers' assistants, etc. More than half of the girls were idle after leaving school. Factory work, domestic and personal service were the main occupations of those who were employed.

Birthplaces of Juvenile Delinquents and their Parents.—Canada was the country of birth of 95.3 p.c. of the juvenile delinquents in 1955 (the place of birth was not recorded in 1.0 p.c. of the cases); 3.9 p.c. were born in the British Isles, Europe, the United States, and Latin American countries. Ontario was the province of residence of 49.5 p.c. of those born outside Canada.

Both parents of 75.2 p.c. of the delinquent children in 1955 were born in Canada and another 12.0 p.c. had one parent born in this country. To evaluate these figures comparison should be made of population ratio of children from 7-15 years of age whose parents were Canadian-born with those whose parents were born elsewhere.

Home Circumstances.—The type of home in which he lives and the amount and quality of supervision he receives are important factors in a child's behaviour. The statistics of the marital status of the parents and the place and type of residence of the child reflect home conditions and are worth recording as possible reasons for social or emotional maladjustment. The parents of 78.3 p.c. of the delinquent children were reported to be living together in 1955 but homes broken by separated parents, divorce or death was the background of 19.9 p.c. of the delinquent boys and girls. The mothers of 11.0 p.c. of the juvenile delinquents were employed other than in the home and the mothers of another 2.6 p.c. were dead. The fathers of 6.7 p.c. of the cases were deceased.

Of every five juveniles who appeared in court, four were urban residents; 92.3 p.c. were living in their own homes at the time they got into difficulties; 4.7 p.c. of them were in foster homes, either with a relative or some other person; and institutions were the homes of 1.7 p.c. of them.

Sources of Complaint.—The police were the complainants in the majority of juvenile cases, 85.6 p.c. of the boys having been charged by them. Probation officers and parents were responsible for 3.0 p.c. and 2.8 p.c., respectively, of those charged. School authorities referred 2.1 p.c. of the boys to the courts and social agencies another 1.0 p.c.

The proportion (55.9 p.c.) of girls charged by the police was considerably less than the proportion of boys so charged. Parents made more use of the courts for girls than for boys (17.4 p.c.). School authorities laid complaints in 6.3 p.c., probation officers in 9.3 p.c. and social agencies in 5.1 p.c. of the girls' cases.

Repeaters.—In 1955 approximately one in every four children brought before the courts failed to heed the first warning and made at least a second appearance. In that year 77.2 p.c. of the delinquent children appeared before the courts for the first time, 15.1 p.c. were second offenders, 4.6 p.c. third, and 3.1 p.c. were dealt with by the courts four or more times.

30.—First Offenders and Repeaters of Major Offences 1946-55

¹ Minor offences included since 1949.

² Newfoundland included since 1951.

Disposition of Cases.—In 1955 not quite one-half of the children's cases (43.7 p.c.) were heard within four days of the charge and slightly over two-thirds (67.0 p.c.) within nine days. However 9.2 p.c. of them had to wait at least two weeks and 9.8 p.c. waited a month or more before the first hearing. These waiting periods may be explained in various ways.

Some county courts sit only twice or even once a month. Hearings may be deferred because of sickness in the family, school examinations, stormy weather or long distances. The chief cause for delay, however, is the time it takes to investigate the facts properly. The probation officer, and frequently there is only one to a court, has to find out what occurred at the time of the delinquency; he must get in contact with the parents and the school, learn something of the home situation, perhaps arrange medical or psychiatric examinations and explore community resources. The disadvantage of a long waiting period is outweighed by the assistance the court receives in deciding the form of treatment best suited to the child's needs and the type of care that will be the most economical for the community. For these intervening days or weeks most children are left in their own homes while a minority are placed in detention homes and, in the long run, whether the effect of the waiting period is good or bad is determined by the care given the youngster during that time.

Juvenile court judges heard 93.4 p.c. and magistrates 5.8 p.c. of the juvenile cases before the courts. The balance were heard by justices of the peace. The proportion of those declared delinquent (93.7 p.c.) in the magistrate's courts was greater than in the juvenile courts (85.3 p.c.). In the former court 4.4 p.c. of the cases were dismissed while in the juvenile courts only 2.4 p.c. were dismissed but 12.3 p.c. were adjourned *sine die*.

Some courts consider children whose hearings are adjourned *sine die* as delinquent while others do not but, for the sake of uniformity in this report, the latter point of view is maintained by the Dominion Bureau of Statistics. In assessing the total problem of juvenile delinquency, however, cases adjourned *sine die* have to be taken into account for, when the proportion of cases dealt with in this way increases, the proportion of those declared delinquent declines.

31.—Juveniles before the Courts, Dismissed and Delinquent 1951-55

Item	1951		1952		1953		1954		1955	
	No.	p.c.	No.	p.c.	No.	p.c.	No.	p.c.	No.	p.c.
Before the courts.....	7,521	100.0	7,213	100.0	7,829	100.0	7,751	100.0	8,187	100.0
Dismissed.....	195	2.6	178	2.5	216	2.8	237	3.1	207	2.5
Adjourned <i>sine die</i>	682	9.1	967	13.4	1,236	15.8	1,182	15.2	955	11.7
Delinquent.....	6,644	88.3	6,068	84.1	6,377	81.4	6,332	81.7	7,025	85.8

Sentences for delinquent boys usually differ somewhat from those for girls. In 1955 the proportion of boys put on probation was 48.8 p.c. and of girls 49.3 p.c. Fines or restitution were meted out to 16.3 p.c. of the boys but to only 6.9 p.c. of the girls. This is because damage to property, for which restitution seems a reasonable adjustment, is committed relatively more often by boys than by girls. A much larger proportion of girls (33.7 p.c.) than boys (14.4 p.c.) were sent to training schools. Final disposition of case was postponed for 8.6 p.c. of the girls and 16.9 p.c. of the boys were given suspended sentences.

Section 4.—Police Forces

The Police Forces operating in Canada are organized under three groups: (1) the Federal Force, which is the Royal Canadian Mounted Police whose operations cover a very wide field in addition to purely police work; (2) Provincial Police Forces—the Provinces of Ontario and Quebec have organized their own Provincial Forces, but the other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their boundaries; (3) Municipal Police—every urban centre of reasonable size has its own police organization which is paid for by the local taxpayers and which attends to police matters within the borders of the municipality concerned.

Subsection 1.—The Royal Canadian Mounted Police*

The Royal Canadian Mounted Police is a Civil Force maintained by the Federal Government. Organized in 1873 as the North West Mounted Police, its duties were confined to what was then known as the North West Territories. By 1904 the work of the Force received signal recognition when the prefix "Royal" was bestowed upon it by King Edward VII. In 1905 when Alberta and Saskatchewan were constituted Provinces an arrangement was made whereby the Force continued to discharge its duties as formerly, each Province making a contribution towards defraying the cost. This arrangement was continued until 1917.

In 1918 the Royal North West Mounted Police was assigned the duty of enforcing Dominion legislation for the whole of Canada west of Port Arthur and Fort William. Soon after the end of World War I an extension of governmental activities made it obvious that the enforcement of Dominion statutes throughout Canada must be the responsibility of a Dominion Force and therefore the jurisdiction of the Royal North West Mounted Police was extended to the whole of Canada early in 1920. In that year the name of the Force was changed to the Royal Canadian Mounted Police and the former Dominion Police with Headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., was absorbed by the Royal Canadian Mounted Police.

The Force is controlled and administered by a Minister of the Crown (the Minister of Justice). Its Commissioner has the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from serving non-commissioned officers. The Force is divided into 17 Divisions, including the Marine Division, with Headquarters at Ottawa, Ont. There are 613 detachments distributed over the entire country. Its land transportation consists of 1,359 motor vehicles, most of which are fitted with two-way radio sets connecting with wireless stations operated by the Force. Such stations operate in both Western and Eastern Canada, including the Quebec-United States boundary area. The Air Division of the Force operates 13 aircraft of various types. The strength of the Force is 4,863 officers and men, with a reserve strength of 300. The reserve strength is located chiefly in the larger cities where men can be congregated easily and where instruction can be given in the evenings. The Marine Division has a strength of 219 officers and men and operates 28 ships of various kinds, the majority of which are located on the Atlantic and Pacific Coasts and on the Great Lakes. The Personnel Branch of the RCMP has officers in each Division across the country. Great care is taken in the selection of recruits.

The Royal Canadian Mounted Police is responsible for enforcing federal laws throughout Canada and is specially empowered to deal with infractions against smuggling by sea, land and air. It also enforces the provisions of the Excise Act and is responsible for the suppression of traffic in narcotic drugs. In all, the Force has responsibility in over 50 Federal Government Acts including the Indian Act. It also assists many departments of the Federal Government in administrative duties and is responsible for the protection of government buildings and property. It is the sole police force operating in the Yukon and Northwest Territories. Furthermore it undertakes secret and security services for the Federal Government. In addition to its federal duties agreements have been made with the Provinces of Alberta, Saskatchewan, Manitoba, Nova Scotia, New Brunswick, Prince Edward Island, Newfoundland and British Columbia whereby the services of the Royal Canadian Mounted Police can be secured to enforce provincial laws and the Criminal Code in rural districts upon payment for such services. The agreement with Saskatchewan has been in existence since 1928 and those with the Provinces of Alberta, Manitoba, New Brunswick, Nova Scotia and Prince Edward Island since 1932. The agreements were entered into with the Provinces of Newfoundland and British Columbia in August 1950 and the police forces of those Provinces were absorbed by the Royal Canadian Mounted Police. The Force has agreements also for policing more than 124 district municipalities, cities and towns.

* Revised by Commissioner L. H. Nicholson, M.B.E., Royal Canadian Mounted Police, Ottawa.

The services of Royal Canadian Mounted Police experts in fingerprints, crime-index information, examination of firearms and questioned documents are available to all other police forces in Canada. A *Police Gazette*, issued monthly and containing instructional articles on police work as well as the latest information on wanted or missing persons, is sent to all police forces across the country. The Force has two Police Colleges that are open to selected personnel from other police forces in Canada and to a more limited number of those outside its boundaries.

The Royal Canadian Mounted Police has gained and held an outstanding position in the police world by its adherence to certain basic conceptions, as outlined in the following special article.

THE PHILOSOPHY OF THE ROYAL CANADIAN MOUNTED POLICE

If the philosophy of the Royal Canadian Mounted Police could be expressed in one word, that word would be "service". Service to the individual and to the community has always been the creed of the Force. It began when the North West Mounted Police went to the prairies in 1873, at which time it was essentially a frontier and a rural police force. The opportunity to give greater service arose in 1920 when, as the Royal Canadian Mounted Police, the organization acquired new responsibilities by expanding its field of operation over the whole of Canada. Since that time still greater opportunities have arisen as the Force has accepted certain provincial as well as wider federal duties.

The service rendered has included dealing with pioneer problems in Western Canada and the North, combating Canada's illicit drug traffic, preventing smuggling on the coasts and the United States border, policing rural areas from coast to coast, patrolling the Arctic and providing Canada's security service. In performing these duties, a strong sense of service has developed in individual members, and therein lies the real strength of the Force.

In order to master its original problems and to survive the conditions under which it was to function, the Force was organized as a semi-military body. And because this kind of organization has proved of lasting value, the training of present-day recruits and the work of the Force are still carried out in a semi-military atmosphere. It is not correct, however, to say that Royal Canadian Mounted Police discipline is military in character. Rather it is a training that serves the unique needs of the Force, which recognizes that discipline must be intelligently enforced and accepted in order to maintain high standards in an organization of some 4,800 members spread over the whole of Canada.

The Royal Canadian Mounted Policeman is impressed with the idea that public esteem for the law and its administration depends in large part on the exemplary behaviour of the individual who enforces that law. The Force therefore insists that discipline, as it pertains to its members, must set moral standards, often at a level higher than those displayed by the average citizen. Thus, a member must at all times act in accordance with the letter of the law and the spirit of the law—civil as well as moral law. Unless he is prepared to adopt this attitude he cannot approach his duties in the manner required of him.

In addition to discipline, the Force stresses the need for a strong sense of public service, initiative, independence of mind, and adaptability to changing conditions. These qualities are essential to the success of every member of the Royal Canadian Mounted Police and an effort is made to show all members, as early as possible, why they are desirable, not only for the sake of the Force but also for the country. At the same time, the Force realizes that it is not possible to convey the full meaning of public service until a member has had practical experience and has developed a satisfaction from his work.

The word "service" means different things to different people. To a member of the Royal Canadian Mounted Police, as distinct from most other public servants, it must be related to what the public in a democracy such as Canada requires of its police forces. Every member of the Royal Canadian Mounted Police, from his earliest days in training, is impressed with the fact that despite his powers as a peace officer, which are given him to carry out his many duties, his rights are no more than those of any other citizen. He must also understand that, although it is his duty to investigate crime, it is the courts of

the country which assess the evidence collected and administer justice. Every member of the Force must realize that his work, though important, is only one link in the legal chain, and that he must be scrupulously careful always to act within the law.

The Royal Canadian Mounted Police has proved that, given a sound sense of service, it is not difficult to maintain high standards. However, the Force considers it is not sufficient to appeal to idealism. Conditions of service receive attention at all levels so that men may develop a pride in their leaders and in their organization. Also, effort is made to develop in each member a sense of accomplishment, both in himself as an individual and in the Force as a whole. This is achieved through his work, through the personal attention paid to his progress and development by his superiors and through the opportunity given him to gain recognition and promotion for initiative, industriousness and devotion to duty.

The sense of accomplishment on a Force-wide basis is developed through a knowledge of the history of the Force, its present responsibilities, and its place in the development of Canada. The Force keeps alive all the colourful and inspiring traditions of the past and, although the work is now somewhat less colourful, it is still inspiring and of vital importance to the country.

Ever since its inception as the North West Mounted Police, the first aim of the Force has been the prevention of crime. The detection of crime has been of secondary importance. Both prevention and detection today, however, demand vastly different methods of procedure from those of early days. Modern methods of living and modern methods of commerce and industry permit the committing of crimes by methods not formerly possible. Crimes arising out of business have become more prevalent as have crimes arising out of the use of automobiles. Modern transport enables criminals to leave scenes of crime quickly and to commit similar crimes at distant points. The police of today can combat crime only by using modern methods. The realization of the need for advanced criminology has had a great influence on the Royal Canadian Mounted Police. Scientific laboratories have been set up, staffed by laboratory detectives who are more than a match for the criminals with whom they contend. Policemen are trained to understand and recognize modern and scientific criminal methods. They are also trained to understand and to use or to avail themselves of scientific methods for combating crime. Policemen in the field, on whom the scientific laboratories depend to collect and protect the material upon which they have to work, are given extensive courses in scientific crime detection, both in their initial training and from time to time throughout their careers. This leads to a constant awareness of up-to-date methods during daily work at all levels of the organization.

A further aspect of Royal Canadian Mounted Police development lies in its growing links with other police forces. The value to the public of co-operation between the Royal Canadian Mounted Police and other police forces in Canada and in other parts of the world, through the International Criminal Police Organization and similar bodies, becomes more evident each day. Indeed, in its unique position as a police force with federal, provincial and municipal police responsibilities, the Royal Canadian Mounted Police is increasingly aware of the necessity for the closest co-operation among all agencies engaged in combating crime and with law-abiding citizens.

The attitude of the public toward any police force depends in large part on the policemen the public meets personally, whether on a prairie farm, on the highway or on the beat in a large city. A police force may be up-to-date in every respect but unless relations between the police and the public lead the citizen to identify himself with his police force, a desirable situation will not exist. It is this sense of citizen-police identification which develops public confidence, and without this confidence police work becomes difficult if not impossible. Members of the Royal Canadian Mounted Police, therefore, are taught to strengthen citizen-police co-operation and are encouraged to approach their work with a sincere desire to develop good public relations. The paramount aim is to provide well-trained, courteous policemen who will win the confidence of the public by serving with efficiency and zeal, and who will also merge with and be a respected part of the community in which they live.

Although through continuous good service the Force has secured for itself a place of confidence in the minds of the Canadian public, its present performance is being used as a measure for raising standards in the future. By developing in its members an ever-increasing sense of loyalty and pride, the Force is endeavouring to improve the quality of service which is now synonymous with the name "Royal Canadian Mounted Police".

Subsection 2.—Provincial Police Forces*

Quebec Provincial Police Force.—This Force is responsible for upholding law and order over the whole territory of the Province from the provincial boundary between Ontario and Quebec to the Magdalen Islands in the Gulf of St. Lawrence. The Force is composed of about 1,000 men in charge of a Director, who is responsible to the Attorney-General of the Province.

To facilitate operations the territory is divided into two almost equal parts designated as the District of Montreal and the District of Quebec. The Director has his office in Montreal and an Assistant Director is situated in the city of Quebec. Working under these Directors are two Deputies and an Inspector General. In each District the Police Force is divided into three sections: the detective corps, the constabulary and the traffic officers. Each section is in charge of a captain supported by a number of lieutenants and sergeants.

A province-wide frequency modulation radio-communication system has been established at Montreal. A main station operating on the top of Mount Royal directs radio equipped cars within a radius of between 60 and 80 miles around Montreal; similar stations operating from the cities of Quebec and Three Rivers direct the mobile units operating in their respective areas. Substations operate at each of the eight bridges giving access to or exit from the city of Montreal and a number of cars, all equipped with three-way radio units, patrol the surrounding country day and night.

Ontario Provincial Police.—The Ontario Provincial Police Force is maintained by the Ontario Government and administered by the Attorney-General's Department. It is responsible for law enforcement in the rural and unorganized parts of the Province and in certain municipalities by contract. The development of the Force from its beginning in the early years of Confederation to the passing of the Police Act in 1946, is outlined in the 1950 Year Book, pp. 332-333.

The Force, with a strength of approximately 1,550 in 1956, consists* of a General Headquarters at Toronto and District Headquarters at Chatham, London, Dundas, Niagara Falls, Newmarket, Mount Forest, Barrie, Peterborough, Belleville, Perth, Cornwall, North Bay, Sudbury, Sault Ste. Marie, Timmins, Port Arthur and Kenora. Each District has Detachments adequate to meet local law enforcement requirements. A Criminal Investigations Branch, under the command of a Chief Inspector, is maintained at Toronto to handle crimes of a major nature.

The Force operates one of the largest frequency modulation radio networks in the world, which is a most efficient method of combating every type of lawlessness. The network includes sixty fixed stations—forty-four 60-watt stations and sixteen 250-watt stations, one of which is dual-controlled—and 515 radio-equipped mobile units including five boats operating on Lake Temagami, Lake Simcoe, Lake Nipissing, Lake of the Woods, and Georgian Bay.

As of May 1957, the Ontario Police Force was policing 69 municipalities which requested this service under the provisions of the Police Act.

Subsection 3.—Municipal Police Statistics

Police statistics were submitted to the DBS for 1955 by Chiefs of Police in 239 urban centres, 16 district communities, 15 townships and one unorganized district, all of 4,000 population or over. The ratio of police per 1,000 population in urban centres of 4,000 population or over for each province was as follows:—

* Revised by Geo. A. Shea, O.B.E., Secretary-Treasurer, Canadian Association of Chiefs of Police, Montreal, Que.

Province	Police per 1,000 Population	Province	Police per 1,000 Population
Newfoundland.....	2.2	Manitoba.....	1.5
Prince Edward Island.....	1.1	Saskatchewan.....	1.5
Nova Scotia.....	1.2	Alberta.....	1.7
New Brunswick.....	1.6	British Columbia.....	1.5
Quebec.....	1.7		
Ontario.....	1.6	ALL PROVINCES.....	1.6

Police statistics for 1954 and 1955 are shown for urban centres of 10,000 population or over in each province in Table 33, and totals are given therein for centres of from 4,000 to 10,000 population. The figures in the column "Offences Known to the Police" include offences and attempted offences which became known to the police, having been reported by any person (including a police officer). Complaints about offences or attempts which, upon investigation, proved to be groundless are not included. Offences known to the police provide the basic data for estimating the prevailing volume and trends of criminality.

RATIO OF MUNICIPAL POLICE FORCES TO POPULATION
IN CERTAIN CITIES, 1955

Section 5.—Penal Institutions and Training Schools

Penal institutions may be classified under three headings: (1) penitentiaries, where prisoners have long sentences and the turnover is slow; (2) reformatories, where the turnover is also rather slow; and (3) common gaols, where the turnover is extremely rapid.

If the average of the figures for inmates at the beginning and at the end of the year be considered the average population for the year, and the number of discharged as the turnover, the turnover in the years 1954 and 1955 was: in penitentiaries, 61 and 51 p.c.; in reformatories, 351 and 365 p.c.; and in gaols, no less than 1,658 and 1,712 p.c. respectively.

In considering these figures it should be borne in mind that the common gaol population changes from day to day and is made up partly of accused persons awaiting trial who may be either liberated or sent to a penitentiary or reformatory.

Subsection 1.—Penitentiaries*

The penitentiaries of Canada are administered by the Penitentiaries Branch of the Department of Justice. Eight institutions are included in the system, the two largest being at Kingston, Ont., and St. Vincent de Paul, Que. Others are at Dorchester, N.B., Prince Albert, Sask., Stony Mountain, Man., New Westminster, B.C., Collin's Bay, Ont., and St. John's, Nfld., though the latter is operated under provincial authority. Included also in the system is a Federal Training Centre at St. Vincent de Paul operated for the treatment and training of offenders under 25 years of age and a Penitentiary Staff College at Kingston for the training of penitentiary officers through courses of instruction and training conferences. In April 1957, Joyceville Institution, ten miles from Kingston, started operating as part of Kingston Penitentiary. Its present accommodation is limited to 48 inmates, but when construction is completed the capacity of this new eastern institution will be increased to 500. It will then become a self-contained organization distinct from Kingston Penitentiary. During the year ended Mar. 31, 1956, the average daily population of the penitentiaries was 5,237 and the total net cash outlay for maintenance for the year was \$8,832,502 or \$4.62 per inmate per day.

Females given penitentiary sentences in the various provinces are sent to the Prison for Women at Kingston, Ont., where special quarters and staff are maintained for their detention and supervision; inmates in custody on Mar. 31, 1956, numbered 84.

Since the proclamation of the Penitentiary Act on Sept. 1, 1947, many of the recommendations of the Royal Commission (1938)—usually called the Archambault Commission—to investigate the penal system in Canada have been implemented. The Commission made 88 recommendations 68 of which involved action on the part of the Federal Government and the other 20 involved either joint action with the provinces or were the responsibility of the provinces and/or local communities.

Of the 68 recommendations which called for action on the part of the Federal Government, at least 50 have been or are in process of being carried out. Among these are the following:

- (1) In 1947 the headquarters administration of the penitentiaries was completely reorganized, a move which included the appointment of a Commissioner responsible directly to the Minister of Justice, and of Deputy and Assistant Commissioners to assist him in the performance of his duties.
- (2) Wardens have been given full responsibility for the executive management of their institutions under the direction of the Commissioner. Four conferences of all Penitentiary Wardens have been held in Ottawa since 1947.

* Prepared under the direction of R. B. Gibson, Commissioner of Penitentiaries, Ottawa.

- (3) More than half of all the penitentiary staffs have so far attended training courses at the Penitentiary Staff College at Kingston. In addition, in-service training officers have been appointed at all institutions and local training is carried out for all newly appointed officers.
- (4) The pay of penitentiary officers has been increased in nearly all cases by at least 100 p.c. since the Commission's report. For example, guards in 1938 received a maximum salary of \$1,500 and now receive \$3,600. The 40-hour week was introduced in 1955.
- (5) A complete revision of the methods of classifying prisoners has been made and two or more qualified Classification Officers are now employed at each institution. These officers assess each inmate, after obtaining information as to his previous record, social habits, aptitudes, educational attainments and general background, and submit their reports to a Classification Board for decision upon a plan for treatment and employment. The Classification Officers work in close co-operation with officials of the National Employment Service and the Prisoners' Aid Societies in planning employment and assistance on the prisoner's release and officials of these organizations regularly visit the penitentiaries and interview inmates.
- (6) Full-time vocational training courses in most of the construction trades have been set up at five institutions under competent teacher-trainers, the courses lasting for a period of nine months. Necessary equipment, tools and materials to turn out well qualified tradesmen are provided. Results to date show that less than 20 p.c. of those who have taken these training courses have been subsequently charged with criminal offences.
- (7) The staff of school teachers has been more than doubled since 1947, libraries have been modernized and the supply of books, magazines, technical books and educational films greatly increased. Correspondence courses provided by the Department of Veterans Affairs and by the Provincial Departments of Education are available free of charge to all inmates who wish to take advantage of them.
- (8) A comprehensive program of recreational activities is in effect in all institutions, with facilities for softball, soccer, hockey, boxing and other sports to be carried on in non-working hours. Hobbycraft activities are permitted in the cells, and prison magazines prepared and edited by inmate editorial boards are published at all institutions.
- (9) Hospitals have been modernized and supplied with much additional equipment, such as X-ray equipment, surgical appliances, and other modern aids to diagnosis and treatment.
- (10) Psychiatrists are now employed on the staff of six penitentiaries, and outside psychiatrists are consulted at the institutions where a staff psychiatrist is not available. At one institution there is a special psychiatric ward with a trained staff.
- (11) A thorough survey of the prison industrial shops was undertaken, shops were modernized, provided with proper lighting and facilities and hundreds of thousands of dollars worth of modern machinery. The value of industrial work produced in these shops increased from \$409,278 in 1946-47 to \$1,223,723 in 1955-56.
- (12) Remuneration for the prisoners has been increased from a flat rate of 5 cents per day to a graded scale of 12, 18 and 24 cents, based on individual rating for conduct, industry and progress towards rehabilitation. A portion of the money so earned is set aside for the day of release, with the balance available for spending in the institutional canteen for small comforts such as tobacco, sweets, soft drinks and toilet articles.
- (13) The recommendation of the Commission with regard to Prisoners' Aid Societies has been largely implemented by the formation of John Howard Societies or other similar associations in every province and in many localities in the individual provinces; these societies are assisted by grants from the Government of Canada.
- (14) The rules for the discipline of officers have been revised, and provide that no officer may be dismissed without being heard, and he must be advised of the reason for his dismissal.
- (15) All penitentiary kitchens have been modernized and supplied with the necessary mechanical equipment to meet approved culinary and sanitary requirements. A qualified official at Headquarters is employed to supervise and direct the operation of the kitchens.
- (16) An agricultural college graduate was appointed Supervisor of Farms and the farming operations have been greatly expanded. Dairy herds are maintained at all institutions except British Columbia and Collin's Bay, with pedigree stock and a high record of milk production. Most of the pork, eggs, and vegetables used in the penitentiaries are produced on the farms. Factories for the canning of fruit and vegetables are in operation at two institutions.

The Ticket-of-Leave System.—The parole system in Canada is legalized under the Ticket-of-Leave Act (R.S.C. 1952, c. 264) administered by the Minister of Justice. It is described in detail in the 1948-49 Year Book, pp. 305-308.

Subsection 2.—Reformatories and Other Corrective Institutions

As of June 1, 1951, there were 13 reformatory and corrective institutions, four of which were for women. Enumeration cards were completed for 2,551 men and 141 women on June 1, 1951. In these institutions for adults 29 p.c. of the inmates were under 21 years of age at the time of admission and almost 50 p.c. were between the ages of 21 and 39 years. The proportion of single men was 63 p.c. and three out of four of the men whose residence was known lived in urban centres. More than one-half of the women (53.2 p.c.) were single and the majority (91.0 p.c.) of those whose residence was known lived in urban centres. From five to eight years of elementary school education were recorded for about one-half of the male and female inmates. Only 6.7 p.c. of the men were unemployed at the time of admission. On the other hand 20.6 p.c. of the women were unemployed and another 34.0 p.c. had never worked.

The revenue for the support of the institutions for men was derived chiefly from provincial funds (56.0 p.c.) and from the sale by the institutions of farm and industrial products (41.3 p.c.). To support the institutions for women, income was received from provincial funds (31.0 p.c.), municipalities (1.8 p.c.), sale of products (53.4 p.c.), donations and bequests (4.6 p.c.) and other sources (9.2 p.c.).

Summary statistics of inmates, movement of population, terms of sentence and penal record of inmates are given in the 1954 Year Book, pp. 311-313.

Subsection 3.—Training Schools

Reports on movement of population are received yearly from training schools and figures compiled therefrom are shown in Table 37 for the years 1952 to 1955.

37.—Movement of Population in Training Schools, Years Ended Mar. 31, 1952-55

Pupils in residence at beginning of year.....	2,342	2,555	2,692	2,905
Admitted during the year.....	2,205	2,503	2,592	2,846
Discharged during the year.....	1,992	2,366	2,372	2,762
In residence at end of year.....	2,555	2,692	2,912	2,989

¹ The discrepancy between pupils in residence end of year 1954 and those in residence at beginning of year 1955 comes from the inclusion in Home of the Good Shepherd, Saint John, N.B., of seven adults.

More detailed information on training schools is collected at each decennial census. Statistics compiled from the Census of 1951 are summarized in the 1954 Year Book, pp. 314-316.

PART I.—FORMAL EDUCATION*

Section 1.—Education in the Provinces and Territories

"In and for each Province the Legislature may exclusively make Laws in relation to Education..." In these words the British North America Act of 1867 makes constitutional provision for the control of Canada's schools.

With certain exceptions, which are mentioned below, each provincial public school system is administered by a Department of Education, headed by an elected Minister who is a member of the provincial Cabinet and operated under the direction of a Deputy Minister who is a civil servant. In accordance with the school laws of the province, the Department of Education determines curricula for the elementary and secondary schools, is responsible for the certification of teachers, and supervises and provides central services for the schools. Local boards of school trustees, usually elected, arrange for the construction and maintenance of school buildings and employ the teachers. Their funds come chiefly from local property taxes and provincial grants.

In addition to these public elementary and secondary school systems there are private elementary and secondary schools, institutions (for the most part governmental) for the education of exceptional children, vocational training institutions controlled by a variety of provincial government departments and by non-governmental bodies, public and private universities and colleges, and adult education agencies under the control of governments and voluntary associations.

* Prepared in the Education Division, Dominion Bureau of Statistics.

Although there are variations from province to province, and within provinces, the usual pattern of education is an eleven- to thirteen-grade system of elementary and high schools, one- to three-year courses in trade schools and technical institutes at the secondary level, post-secondary teachers' colleges with one- to four-year programs of training, and universities offering three-year and longer courses in the arts and sciences and the professions. Agencies of adult education, both formal and informal, provide short- and long-term programs of study.

Characteristic of education at all levels and in most regions are: (1) rapidly increasing enrolments; (2) active school building programs, never quite catching up with the demand for facilities; (3) a shortage of teachers—despite increased salaries, recruitment from the United Kingdom, and emergency short-course training schemes; and (4) mounting expenditures. The attention being given to the education of exceptional children in recent years is worthy of special note.

The following paragraphs indicate the ways in which the several provincial systems differ from the pattern outlined above, together with mention of institutions and practices of special interest and of significant recent developments in education.

Newfoundland.—Newfoundland might be said to have a public denominational school system. The Deputy Minister is assisted by four Superintendents of Education, one for each of the four main religious denominations—Anglican, Roman Catholic, Salvation Army and United Church. The Minister of Education, the Deputy Minister and the four Superintendents form a Council of Education which makes educational policy and co-ordinates the various parts of the system. One curriculum serves the schools of all denominations and teachers receive common training in the Memorial University of Newfoundland, a provincial institution.

Each denomination builds and maintains its own schools, with financial assistance from the Provincial Government. The salaries of almost all teachers are paid directly by the Province according to a provincial scale. Until recently no provision had been made for local taxation, but in 1954 legislation was passed which provided that any area might be declared taxable for school purposes. By 1955 only one area had been so declared.

Some children are admitted to school at the age of five in what is called a "pre-grade 1" class. Elementary education includes grades 1 to 8 and secondary education grades 9 to 11. Most schools teach both elementary and secondary grades. The high school curriculum is academic, leading to university entrance after grade 11. In some schools in St. John's, grade 12 studies are offered (they follow the Nova Scotia grade 12 program of studies and the pupils write Nova Scotia examinations) and a post-grade 11 commercial course is taught. An active school building program in the Province includes, for the first time, regional high schools. Few private schools are operated in Newfoundland.

Trade training is offered in the St. John's Vocational Training Institute. A provincial university to which is affiliated a theological college (Queen's) is located in St. John's. The Division of Adult Education of the Department of Education sponsors programs in both urban and rural centres.

Prince Edward Island.—Except in Charlottetown and the incorporated towns, the school boards are the only local governing authorities, and therefore collect the school tax. Teachers' salaries are provided by the Provincial Government, supplemented by the local school board.

Kindergarten classes are available in a few urban schools. The elementary school curriculum comprises grades 1 to 8 and high school grades are 9 to 12, grade 12 being the junior matriculation grade. The majority of the Island's schools are of one room and it is common for rural schools to teach grades 1 to 10, with grades 11 and 12 available in the larger centres. One junior high school has been established recently. There are a few private Roman Catholic schools in the Province.

Trade training is given in the Provincial Vocational School and two private business colleges provide commercial courses. The Government operates the Prince of Wales College and Normal School in Charlottetown, offering junior college and teacher-training courses, and both high school and university programs are available at St. Dunstan's College (Roman Catholic). A Director of Adult Education on the staff of the Department of Education organizes programs throughout the Province.

Nova Scotia.—The public school curriculum of Nova Scotia is in three divisions: elementary school (primary grade and grades 1 to 6), junior high school (grades 7 to 9) and senior high school (grades 10 to 12). The junior matriculation level is reached at the end of grade 11 and the senior matriculation level at the end of grade 12. Senior high schools provide commercial courses as well as a general academic course.

In recent years, numbers of rural and regional high schools, commonly offering grades 7 to 12, have been created to provide secondary school facilities outside the urban centres. The number of pupils studying by correspondence, though a relatively small proportion of the total, has increased in recent years because of the shortage of qualified teachers. There are about a score of private elementary and secondary schools in the Province, almost all of them Roman Catholic.

On Jan. 1, 1956, significant legislation gave effect to recommendations of a Royal Commission on Public School Finance in Nova Scotia. It was designed to establish a "foundation program" in all public elementary and secondary schools, to make more equitable the basis of taxation for school purposes and to distribute provincial support in relation to need.

Vocational training is provided under the auspices of the Department of Education in two county vocational high schools, in evening vocational classes in more than 40 centres, by correspondence courses, and in eight coal-mining schools, a land survey school, a marine navigation school, a marine engineering school, and a college of art. The Department of Labour operates three Canadian Vocational Training Centres. The Nova Scotia College of Agriculture, operated under the Department of Agriculture, gives short courses in agriculture. Fisheries schools are operated by the Department of Trade and Industry. In 1955 there were seven private business colleges and nine private correspondence schools registered under the Trade Schools Regulations Act, which is administered by the Department of Education.

Until 1955, elementary school teachers were trained only in the Nova Scotia Normal College and secondary school teachers in the universities. Since that year, however, Acadia University, Dalhousie University, Mount Allison University and St. Francis Xavier University provide teacher-training to students who have completed two or three years of college studies, as well as to those who have university degrees, thus preparing teachers for the elementary and junior high schools.

Nova Scotia has 14 institutions of higher education: Acadia University, Collège Sainte-Anne, Convent of the Sacred Heart (junior college), Dalhousie University, University of King's College, Maritime College of Pharmacy, Pine Hill Divinity Hall, Holy Heart Seminary, Maritime School of Social Work, Mount Saint Vincent College, Nova Scotia Agricultural College (junior college), Nova Scotia Technical College, St. Francis Xavier University (including Mount Saint Bernard College and Xavier Junior College), and St. Mary's University.

With the assistance of the Adult Education Division of the Department of Education, there is a province-wide program for adults which includes folk schools, evening classes, short courses and cultural services, with special emphasis on economic development. A number of the universities offer extension services.

New Brunswick.—New Brunswick has a 12-grade public school system: elementary school (grades 1 to 8) and high school (grades 9 to 12). Grade 12 is the junior matriculation grade. In two urban high schools a thirteenth grade is taught which follows

the program of studies of the first-year course at the University of New Brunswick, whose examinations the pupils write. There are somewhat fewer than twenty private academic schools in the Province, most of them Roman Catholic.

In recent years facilities for secondary education have been increased by the construction of regional and rural high schools. In many of these and in urban composite high schools, there are several choices of curricula—academic, commercial, industrial, home economics and agriculture.

Vocational education is provided also in two vocational schools, in the New Brunswick Technical Institute at Moncton, in evening classes in many centres, in the Maritime Forest Ranger School, in four agricultural schools (two operated by the Department of Agriculture and two by the Department of Education), and in private business colleges of which there are about half a dozen.

Elementary school teachers are trained in the New Brunswick Teachers' College and in the normal school of the Université Saint-Joseph. In addition, there are normal school courses for men and women in six Roman Catholic educational institutions. Secondary school teachers are trained in five universities, and for industrial-course teachers there is a training program at the New Brunswick Technical Institute. A recent development in teacher education was the establishment in 1955, at the University of New Brunswick and at least one other university, of a course leading, in three years beyond the year at Teachers' College, to a Bachelor of Elementary Education degree.

New Brunswick has six universities and colleges: Mount Allison University, University of New Brunswick, Université de Sacré-Coeur, Université Saint-Joseph (including Collège de l'Assomption and Collège Notre-Dame d'Acadie), Université Saint-Louis (including Collège Maillet), and St. Thomas College.

Quebec.—In Quebec, education is represented in the provincial Cabinet by the Provincial Secretary rather than by a Minister of Education. Public elementary and secondary schools are controlled by a Council of Education which is made up of two committees—one supervising Catholic education and the other supervising Protestant education. The Department of Education is headed by a Superintendent and two Deputy Ministers—one for Catholic and the other for Protestant schools—and Catholic and Protestant school systems exist side by side, each relatively independent of the other.

Private or independent schools play a much more prominent role in Quebec than in other provinces. Chief among these are the classical colleges, which number nearly a hundred. Affiliated to the French-language universities (Laval, Montreal and Sherbrooke), they offer an eight-year course, entered after completion of elementary school and leading in two four-year stages, secondary and college, to the baccalaureate degree.

The French public school curriculum was recently revised to the English pattern. In other words, a seven-year elementary school and a four- or five-year secondary school was substituted for a three-stage primary school (elementary, 1 to 7; complementary, 8 and 9; superior, 10 to 12). A classical course has also been introduced in the public secondary school, equivalent to the first four years of the classical college curriculum. The junior matriculation level in both Catholic and Protestant schools is at the end of the eleventh year.

Public vocational education is highly developed in Quebec, chiefly under the Department of Social Welfare and Youth which operates a network of arts and trades schools, technical schools, and institutes. Teacher training, too, has undergone radical revision within the past few years. The normal schools raised the entrance requirement to completion of the eleventh year, instituted one-, two- and four-year courses, and related their programs to university requirements so that a degree in pedagogy may be earned in the four-year course.

In addition to the three French-language universities mentioned above, there is a Canadian Services College—Collège Militaire Royal de Saint-Jean—and three English-language institutions of higher education: McGill University (including Macdonald College), Sir George Williams College and Bishop's University.

Adult education forms part of the program of a host of governmental and voluntary bodies, many of the latter receiving support from the Province.

Ontario.—Ontario has a thirteen-grade public school program, the junior matriculation level being reached at the end of grade 12, and senior matriculation at the end of grade 13. Commonly, elementary schools comprise grades 1 to 8, but some teach up to grade 10 and many have kindergarten classes (for four-year-olds) and kindergarten-primary classes (for five-year-olds). Secondary schools include grades 9 to 13, offering several curricula: general (academic), art, commercial, home economics and industrial.

Elementary schools under control of the Department of Education may be public or separate, all but three of the latter being Roman Catholic. A considerable number of the Roman Catholic separate schools in French-language communities are bilingual and are staffed by teachers trained in both French and English. Secondary schools under departmental control are all public and are of five main types: collegiate institutes, high schools, continuation schools, vocational schools and composite schools. A relatively small number of pupils attend private schools, most of which are inspected by the Department of Education and the students at which are prepared for Departmental certificates.

Most vocational education at the secondary level is provided in the public secondary schools, although there is a Provincial Institute of Trades (in Toronto), and there are two agricultural schools under the Department of Agriculture, many private business colleges and a number of private trade schools. The Department of Education also operates four technical institutes with most courses at the post-secondary level.

Teachers for the elementary schools are trained at teachers' colleges operated by the Department of Education, in a one-year course following completion of grade 13 or a two-year course following grade 12. Secondary school teachers receive a one-year period of training at the Ontario College of Education, University of Toronto, after university graduation. Vocational school teachers are also trained at the Ontario College of Education.

In addition to a number of independent junior colleges and professional training schools, the Province has nine institutions of higher learning: University of Ottawa, Queen's University, Royal Military College, University of Toronto, McMaster University, University of Western Ontario, Assumption University of Windsor, Carleton University and Collège du Sacré-Coeur. All but the last two have federated or affiliated colleges.

A Community Programmes Branch of the Department of Education provides assistance to informal adult education and recreation programs, public secondary schools sponsor night classes, the universities offer extension services and many voluntary agencies operate in the field of adult education.

Manitoba.—The curriculum of Manitoba's public schools is organized in three stages: elementary (kindergarten and grades 1 to 6), junior high school (grades 7 to 9) and senior high school (grades 10 to 12). The junior matriculation level is reached at the end of grade 11, and the senior at the end of grade 12. In the larger centres there are schools of these three types while in rural areas most or all of the grades are often taught in one school. There has been little consolidation in Manitoba and many small schools still exist.

In the city of Winnipeg one of the eight senior high schools is vocational. There are composite high schools in other centres, and vocational as well as academic courses are available in a number of schools. No provision is made for separate schools in the public system but there are private or parochial schools which are inspected by officials of the Department of Education.

In addition to the vocational courses provided in the senior high schools, the Department of Education operates a trade school (Manitoba Technical Institute) in Winnipeg, and the Department of Agriculture has an Agriculture and Home-making School in Brandon.

Elementary school teachers are trained at the Provincial Normal School, Tuxedo, and at the Normal School of Brandon College—in a one-year course following grade 12. Secondary school teachers are prepared by the University of Manitoba and by Brandon College in a post-graduation year. Summer courses at the Manitoba Technical Institute are provided for the training of vocational instructors.

Higher education is provided by the University of Manitoba, with which are affiliated Brandon College, the Manitoba Law School, Collège de Saint-Boniface, St. John's College, St. Paul's College and United College, and by the Grand Séminaire de Saint-Boniface an affiliate of the University of Montreal. Direction of the provincial adult education program and the University of Manitoba's extension services is fused in the office of the Director of University Extension and Adult Education. Agricultural extension is under the Department of Agriculture.

Saskatchewan.—The Saskatchewan school curriculum is divided into two stages: elementary (kindergarten and grades 1 to 8) and high school (grades 9 to 12). The senior matriculation level is at the end of grade 12 and there is no leaving certificate awarded at the junior matriculation level (end of grade 11). Both public and separate (chiefly Roman Catholic) schools are under the control of the provincial Department of Education which also inspects all private elementary and most private secondary schools.

Three technical schools and an increasing number of composite high schools are included in the provincial system. A Canadian Vocational Training centre is located in Saskatoon. A government correspondence school serves a growing number of students, offering courses at all grade levels and in vocational subjects. Consolidation of school districts is proceeding in Saskatchewan but there are still many small rural schools in operation. Special attention was given to the problems of rural schooling by a provincial Royal Commission on Agriculture and Rural Life whose report on *Rural Education* was published in 1956.

The elementary school teachers of Saskatchewan are trained in a one-year course, following grade 12, at two Saskatchewan Teachers' Colleges (Moose Jaw and Saskatoon), or at the College of Education of the University of Saskatchewan which also trains secondary school teachers. A recent move to relate more closely the teachers' colleges and the University made it possible for graduates of the former to gain a year's credit for their training when entering the University for the four-year Bachelor of Education course.

The University of Saskatchewan (including Regina College) and its ten affiliated colleges dominate the higher educational scene, but there are also two independent Roman Catholic theological seminaries and four colleges affiliated with the University of Ottawa.

There is an active Adult Education Division in the Department of Education and a flourishing program of rural extension centred in the College of Agriculture of the University.

Alberta.—Like Saskatchewan, Alberta has a 12-grade system ending at the senior matriculation level, and divided into public and separate schools, with, in addition, departmental inspection of private schools. The curriculum is divided into three stages: elementary school (grades 1 to 6), junior high school (grades 7 to 9) and senior high school (grades 10 to 12). Because of crowding in the schools there has been no kindergarten in the public system since 1954, but private kindergartens do operate.

A major project was completed in 1954 when the Coterminus Boundary Commission submitted its final report. For most of the settled parts of the Province, the Commission's work resulted in identical boundaries for rural school and municipal administrative areas. Centralization of school facilities has been a significant aspect of school administration in recent years, resulting in improved facilities, better qualified teachers and greater retention of pupils in high school grades.

Vocational education is provided in public high schools, many of them of the composite type; in the Provincial Institute of Technology and Art at Calgary; at three Canadian Vocational Training centres—one for trade training, one for nursing aide training and one for commercial training; at three agricultural and home economics schools operated by the Department of Agriculture; and in private trade schools and business colleges.

All teacher training in Alberta is conducted by the University of Alberta at Edmonton and a branch of that institution at Calgary. Minimum training of elementary school teachers is given in a one-year course following grade 12 while secondary school teachers must have a university degree. Since 1954, Alberta, like a number of other provinces, has had an emergency teacher-training program consisting of summer courses with intervening periods of teaching during the school year.

Higher education is concentrated in the University of Alberta, including its Calgary branch and three affiliated colleges. There is an independent Roman Catholic seminary affiliated with the University of Ottawa, and also two independent junior colleges.

The University of Alberta's extension service is province-wide and the Department of Agriculture also conducts an active extension program.

British Columbia.—The basic divisions in the public school system of British Columbia are: elementary school (kindergarten and grades 1 to 6), junior high school (grades 7 to 9) and senior high school (grades 10 to 13). There are, however, several combination patterns, e.g., elementary-junior high school, elementary-senior high school, junior-senior high school. The junior matriculation level is reached at the end of grade 12 and the senior matriculation level at the end of grade 13. No provision is made for the public support of separate schools but there are private schools in the Province serving minority groups. Consolidation of schools has progressed far in British Columbia.

Public vocational schools include the Vancouver Technical School, Vocational Institute and the Vancouver School of Art, all at the secondary level, two provincial trade schools and a number of private trade schools and business colleges.

Until 1956 elementary school teachers were trained in two provincial normal schools and secondary school teachers in the University of British Columbia. In that year all teacher training was integrated in a College of Education created in the University.

The chief institution of higher education is the provincial University of British Columbia, to which are affiliated Victoria College (a junior college) and four theological schools, two of which are recent establishments. There are, in addition, a Canadian Services College at Royal Roads and Notre Dame College at Nelson which is a junior college affiliated to Gonzaga University, Spokane, Washington.

Under the jurisdiction of the provincial Department of Education there are night classes, vocational courses, correspondence courses and community program services for adults, and the University operates a province-wide system of extension services.

Yukon Territory.—The Government of Yukon Territory has its own Department of Education, headed by a Superintendent of Schools at Whitehorse. It operates 14 public schools and two Roman Catholic separate schools. In addition, under the jurisdiction of the Indian Affairs Branch of the Department of Citizenship and Immigration, there are four Indian schools in the Territory proper and another in nearby northern British Columbia.

Northwest Territories.—The Federal Department of Northern Affairs and National Resources operates schools in the Territories for Eskimos and Indians, often with the co-operation of the Anglican and Roman Catholic churches. On behalf of (and at the expense of) the Territorial Government it also operates schools for white and mixed-blood children and, in addition, is responsible for the education of Eskimos in northern Quebec.

Curricula in the schools of the Northwest Territories is adapted to the special needs and the way of life of the people. Recent innovations include provision for vocational training and the education of adults, and of correspondence courses for those unable to

receive classroom instruction. To accommodate the children of nomadic Eskimos and Indians, denominational hostels are being built at federal expense in certain of the centres in which there are federal day schools. They are then operated by the Anglican or Roman Catholic churches.

Federal Roles.—In addition to the responsibility of the Department of Northern Affairs and National Resources for education in the Northwest Territories, the Indian Affairs Branch of the Department of Citizenship and Immigration, in co-operation with the provinces, administers Indian schools throughout Canada; the Department of National Defence, also in co-operation with the provinces, operates schools on military stations in Canada and in Europe and operates three Canadian Services Colleges in Canada; the Department of Justice provides schooling in the penitentiaries; and the Department of Veterans Affairs has a program of education in veterans hospitals as well as correspondence courses for veterans, federal civil servants and inmates of penitentiaries. Vocational training in the provinces is assisted by the Training Branch of the Department of Labour.

Higher education is aided by federal grants to universities and by the provision of fellowship, scholarship, bursary and loan funds. Research grants are made by a number of departments and agencies of the Federal Government. In the field of adult education, the Federal Government's participation is through such channels as the newly created Canada Council for the Encouragement of the Arts, Letters, Humanities and Social Sciences, the Canadian Citizenship Branch of the Department of Citizenship and Immigration, the Canadian Broadcasting Corporation, the National Film Board, the National Museum and the National Gallery. These phases of education are dealt with in Part II of this Chapter, pp. 363-373.

Section 2.—Statistics of Schools, Universities and Colleges

Educational institutions in Canada are herein grouped under four captions: provincially controlled schools, privately controlled schools, universities and colleges, and federal schools in the Territories and for Indians. The first three groups are dealt with in this Section, while information on Indian schools, with the exception of enrolment figures shown in Table 2, is included with the general material on the Indians of Canada given in the Population Chapter, at pp. 146-149.

The provincially controlled schools, both public and separate, are most numerous and account for about 90 p.c. of the total enrolment shown in Table 2. These schools are financed essentially through direct taxes on property (the amount fixed by local school authorities) and provincial grants. In addition there is a much smaller number of private schools in all provinces (i.e., schools that are not conducted by publicly elected or publicly appointed boards and are not financed out of public money). At the higher education level considerable provincial support is given to the six provincial universities and one or more colleges in each of the other provinces and some provincial aid is given to most of the other 16 private universities and 163 colleges giving degree credit courses. In addition all degree-granting universities and colleges are eligible for grants from the Federal Government and these are paid to all except those in the Province of Quebec.

Agricultural colleges and schools, their location, courses offered and other pertinent information are listed in Chapter IX on Agriculture.

Direct control and operation of the public schools is in the hands of boards of school trustees which operate under provincial school law and whose members are elected or appointed usually for terms of two or three years. In most provinces in addition to the unit boards in charge of a single-room rural school, and village, town or city school systems, there are unit boards in charge of larger administrative units. These are usually formed of the rural and sometimes the urban schools in a county or inspectorate, the local boards often retaining ancillary functions. Table 1 gives the number of active boards by province whether these are in charge of local areas or larger units, the number of official trustees appointed in lieu of boards and the number of board members appointed and elected.

² Included with independent local boards.

² Estimated where necessary.

Subsection 1.—Provincially Controlled Elementary and Secondary Schools*

Enrolment and Attendance.—At the elementary school level, enrolments have been increasing steadily in the postwar period and recent birth registrations and immigration figures indicate that this trend will continue.

Other factors responsible for increased enrolment include: the introduction of family allowances in 1945 which improved attendance and kept greater numbers of pupils in school to the minimum age limit; increased attention to guidance and other means of keeping pupils in school; greater appreciation of the importance of completing secondary education; increased transportation facilities provided at public expense; the erection of dormitories in certain provinces; adoption of larger units of administration and the establishment of junior high schools and of composite schools to serve rural areas particularly.

Enrolment in provincially controlled schools for the latest school year available is given in Table 2 and average daily attendance is shown in Table 3.

* Academic and vocational day schools only.

¹ Province reports totals only for grades 1 to 3 and 4 to 6; numbers for individual grades are estimated.

² Includes 179 grade 11 students and 154 grade 12 students enrolled in Prince of Wales College.

Teaching Staffs.—In 1954-55 the teaching staffs of provincially controlled elementary and secondary schools consisted of 28,777 men and 79,264 women, a total of 108,041. Omitting Quebec, for which comparable data are not available, 38 p.c. of the teachers were in cities, 31 p.c. were in towns and villages, 20 p.c. were in one-room rural schools and the remaining 11 p.c. in schools of two or more rooms outside of urban centres. Again omitting Quebec where 36 p.c. of the teachers were members of religious orders, approximately 30 p.c. of the women teachers were married. Of the total number of teachers in the nine provinces (exclusive of Quebec), about 8 p.c. had received little or no training. At least 15 p.c. of the teachers leave the profession each year.

5.—Teachers in Provincially Controlled Schools classified according to Salary, by Province, School Year 1954-55

Financial Support.—The public elementary and secondary schools are financed almost wholly from money derived from local taxation and provincial grants. Fees for elementary schooling may be charged in Quebec. In a few of the other provinces nominal fees are charged for the higher secondary grades; in Newfoundland there is little local taxation and fees are generally charged.

In general, school boards submit their budgets to the local municipal councils which levy for and collect the required amounts. However, school boards in Quebec and a few in other provinces have the power to levy and collect taxes for school purposes. Assessment, on which taxes for school purposes are levied, is the total valuation of land and buildings and sometimes improvements, personal property or business income are added in. Steps have been taken by several provinces to equalize real property assessment over large areas or even the whole province.

Each province has its own method of apportioning funds to local school boards. Grants are of two types. (1) The basic grant may be calculated on a minimum cost determined by an amount per classroom, salary and qualifications of the teacher, average attendance, etc. All provinces make some attempt to equalize educational opportunity through basing grants in part on some indication of need. (2) Special grants are paid to assist with transportation, music, arts and crafts, special classes, equipment, building costs, night classes, etc. They are largest in Quebec where there is marked emphasis on training for home industries, arts and crafts.

Newfoundland schools are largely supported from provincial funds. Tuition fees may be charged by school boards and by the boards of the colleges (actually schools of fairly high standard giving elementary and high school instruction) in the city of St. John's; and additional fees may be charged for fuel or janitor service where these are not provided by pupils or their families. There has been no local taxation until very recently and it now exists only in a few of the larger centres. The Province pays teachers according to experience and qualifications and some school boards supplement this amount. The Province also makes annual grants for plant maintenance and repairs and for new construction.

Table 6 presents a comparative statement of the finances of school boards operating provincially controlled schools in so far as this information is available.

6.—Income of School Boards of Publicly Controlled Elementary and Secondary Schools by Province, Fiscal Years Ended 1950-51

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

¹ Net figures, after deduction of sinking funds.

Subsection 2.—Private Elementary and Secondary Schools

Private schools include all those not operated by publicly elected or appointed boards. Except in Quebec, they receive no support from public funds. Instruction is similar to that given in public schools except that more tuition may be given in music, dramatics, art, etc., and in schools under religious control there is greater emphasis on religious instruction. In most provinces there is some form of inspection or regulation by the provincial Department of Education.

Of the 865 private schools reporting in 1953-54, 550 were in Quebec, 110 in Ontario, 130 in the Prairie Provinces, 41 in British Columbia and 34 in the Maritimes. There were 6,057 full-time teachers of whom 1,593 were men. Outside of Quebec the salaries for lay teachers in these schools ranged from \$1,000 to \$8,000 with a median of \$2,432.

Salaries of members of religious orders are omitted as they are usually only nominal. In 1953-54 there were 41,727 girls and 31,595 boys enrolled in the reporting private schools, about 63 p.c. of them in the elementary grades. At the secondary level there were 24,711 girls and 17,574 boys enrolled.

Private schools are financed largely from fees, legacies and gifts, or are supported through religious organizations. Annual fees vary widely—in 1953-54 (for eight provinces) 122 schools charged no fees or fees under \$50, three schools charged fees of \$500 or more for day pupils, nine boarding schools charged no fees or fees of less than \$50 and 13 other boarding schools had fees of \$1,000 and up. The average fee in 1953-54 was \$90 for day schools and \$450 for boarding schools. Expenditures of private schools in all provinces in that year amounted to over \$18,869,000 of which \$6,100,000 was paid out in teachers' salaries.

7.—Enrolment in Private Elementary and Secondary Schools by Province, School Years Ended 1945-54

NOTE.—Figures from 1921 will be found in the corresponding table of previous Year Books beginning with the 1937 edition. There is one small private school in Newfoundland.

¹ Exclusive of Quebec.

² Estimated.

Business Colleges.—Of the 132 business schools reporting in 1953-54 in eight provinces (exclusive of Quebec and Newfoundland), 15 were in the Maritimes, 75 in Ontario, 25 in the Prairie Provinces and 17 in British Columbia. These employed 110 men and 277 women as full-time teachers and 29 men and 100 women as part-time teachers.

In these schools, girl students far outnumbered boys and the enrolment in evening classes was greater than that in the full-time day classes. The 1953-54 enrolments were: full-time day classes, 10,754 girls and 2,013 boys; correspondence courses, 601 girls and 174 boys. The total increased by 515 as compared with 1952-53. More than three-quarters of the full-time day students were from 16 to 19 years of age, inclusive.

Monthly fees ranged from \$9 to \$35 for day classes and from \$3 to \$15 for evening classes. Total operating expenditures for 1954 amounted to over \$2,886,000, of which \$1,308,000 went for teachers' salaries.

8.—Enrolment in Private Business and Commercial Schools (Business Colleges) by Province, School Years Ended 1945-54

NOTE.—Figures include day and evening classes. Those from 1921 will be found in the corresponding table of previous Year Books beginning with the 1937 edition.

Subsection 3.—Universities and Colleges

Enrolment.—Total full-time university-grade enrolment in the regular winter session at Canadian universities and colleges totalled 63,041 in 1952-53, 64,140 in 1953-54 and 67,987 in 1954-55. The estimated figure for 1955-56 was 71,600 and for 1956-57 it was 78,100. Table 9 gives details of enrolment in 1953-54.

¹ Includes enrolment in diploma and certificate courses not of degree credit.

In 1954-55 one of about every 18 full-time university-grade students in Canada was a resident of a country other than Canada. Foreign enrolment has risen considerably since the end of World War II, with a larger proportion of students from outside the United States and the United Kingdom coming to Canadian institutions. In 1954 and 1955 well over half of all foreign students were from other than these two countries, as shown in Table 10.

¹ Before 1949 Newfoundland was considered as being a country outside Canada.

² Data from the Committee on Friendly Relations Among Foreign Students, New York, U.S.A.

³ Data from the Association of Universities of the British Commonwealth, London, England. Newfoundland is included with Canada for all years.

Graduates.—Awards made during the 1953-54 session included 12,083 bachelor and first professional degrees, 1,468 master and licence degrees, 242 earned doctorates, 249 honorary doctorates and 6,989 diplomas and certificates. For 1954-55 awards included 12,290 bachelor and first professional degrees, 1,438 master and licence degrees, 271 earned doctorates, 282 honorary doctorates and 7,218 diplomas and certificates. Table 11 shows figures for graduates in most faculties for three years.

11.—Graduates from Universities and Colleges, Academic Years Ended 1953-55

NOTE.—Figures for 1920-36 are given in the 1938 Year Book, pp. 993-997, and for 1937-52 in the corresponding tables of subsequent editions.

¹ Includes Bachelors of Letters and Social Science. ² Some institutions include Science degrees in Arts. ³ Includes Bachelors of Accounting and Secretarial Science. ⁴ Includes diplomas in Architecture from the School of Fine Arts of Montreal.

⁵ Includes all diplomas and degrees except for Bachelors of Divinity. ⁶ Includes M.Com., M.Ed., M.Paed., M.S.W., as well as M.A. In some institutions, M.Sc. degrees are included with M.A.'s.

⁷ Includes M.A.Sc., M.S.A., M.Sc.F., M.Arch., M.V.Sc., M.Sc. Dent., M. Surgery (where conferred separately), as well as M.Sc. ⁸ The "Licence" in the French-language universities is the next degree in advance of the Bachelor.

⁹ Except diplomas for students in education and theology reported elsewhere.

Teaching Staff.—Table 12 shows the upward trend in university teaching staffs since 1921.

12.—Teaching Complement in Universities and Colleges, Academic Years Ended 1921-55

¹ In 1937-38 one institution reported 333 instructors and lecturers earning less than \$1,000. As a corresponding number were not reported in later years, many of these were presumed to be either part-time or below the rank of instructor or lecturer; the median was calculated without these persons.

² Less than \$1,000.

Finances.—Since 1952, grants from federal, provincial and municipal governments to a group of institutions representing about 80 p.c. of the total full-time university-grade enrolments have exceeded half of the total current income, less ancillary enterprises. Table 14 gives a historical series of the finances of this group of institutions. The institutions omitted are mainly those conducted by religious orders where teachers receive little or no salary and the financial returns are consequently not comparable.

14.—Current Income and Expenditure and Capital Resources of Universities and Colleges, Academic Years Ended 1921-54

¹ Board and lodging not included.

² Included with "Endowments".

The Federal Government established a system of university grants for current operating purposes, the first of which were paid during the academic year ended 1952. The grants were paid on the basis of 50 cents per head of population in each province, the eligible institutions receiving their shares of the total provincial allotment according to the number of full-time students at university level attending degree or graduate diploma courses. For 1956-57 the payment was increased to \$1 per head of population. The distribution of payments, by province, is shown in Table 15.

¹ The grant from 1951-52 to 1955-56 was 50 cents per head of population in each province; for 1956-57 it was \$1 per head of population.

² Institutions in Quebec accepted payment only in 1951-52, refusing from 1952-53 to 1955-56. For 1956-57, payments refused will be held in trust by the National Conference of Canadian Universities until the institutions see fit to accept them.

During the 1956-57 academic year, plans were announced by the Federal Government for the distribution of \$50,000,000 to Canadian universities and colleges for new construction and capital equipment projects. The grants will be made in an amount not exceeding

50 p.c. of the cost of specific building or capital equipment projects, with appropriate regard to the population of each province. The University Capital Grants Fund will be administered by the Canada Council, which came into existence on Mar. 28, 1957, when an Act for the establishment of a Canada Council for the Encouragement of the Arts, Humanities and Social Sciences in Canada was given Royal Assent. The Council, first proposed in the Massey Report of 1951, was also endowed with an additional \$50,000,000 for the provision of scholarships and other assistance in the fields of the arts, humanities and social sciences.

PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION*

Section 1.—Art and Education†

Fine Art Schools, Galleries and Museums.—Fine art appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five subjects for a year or two; in some, e.g., Acadia University, N.S., there are six or more elective courses. In Mount Allison University, N.B., and in the Universities of Saskatchewan and Manitoba, there is a sufficient number of courses to allow the taking of a Bachelor degree with specialization in fine art. At the University of Toronto, Ont., an Honour B.A. in art and archæology is offered, as well as graduate work in this field. Departments of fine art were opened by McGill University in 1948-49, by the University of British Columbia in 1949-50 and by the University of Alberta in 1953-54; McMaster University reopened its department in 1951.

There are also schools of art not requiring any fixed academic standing for admission, as they are more concerned with the technical development of the artist. The most widely known of these are:—

Nova Scotia College of Art, Halifax, N.S.

École des Beaux-Arts, Quebec, Que.

École des Beaux-Arts, Montreal, Que.

School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.

Ontario College of Art, Toronto, Ont.

University of Manitoba School of Art, Winnipeg, Man.

Provincial Institute of Technology and Art, Banff School of Fine Arts,
Banff, Alta. (affiliated with the University of Alberta) Calgary, Alta.

Vancouver School of Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. Summer schools of art are sponsored by some of the foregoing institutions, by universities, and by various independent groups.

Public art galleries and museums in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and often concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions, and organizations such as the Maritime Art Association, the Western Canada Art Circuit, the Saskatchewan Arts Board and the Art Institute of Ontario, have been founded to carry on the work on a regional basis. The National Gallery of Canada has a nationwide program of this nature.

* An outline of the *Report of the Royal Commission on National Development in the Arts, Letters and Sciences*, which was tabled in Parliament on June 1, 1951, is given in the 1952-53 Year Book, pp. 342-345. Available from the Queen's Printer, Ottawa.

† Revised under the direction of Alan Jarvis, Director, National Gallery of Canada, Ottawa.

The principal art galleries and museums* are:—

New Brunswick Museum, Saint John, N.B.
 Museum of the Province of Quebec, Quebec, Que.
 Montreal Museum of Fine Arts, Montreal, Que.
 National Gallery of Canada, Ottawa, Ont.
 London Public Library and Art Museum, London, Ont.
 Art Gallery of Toronto, Toronto, Ont.
 Royal Ontario Museum of Archaeology, Toronto, Ont.
 Art Gallery of Hamilton, Hamilton, Ont.
 Willistead Library and Art Gallery, Windsor, Ont.
 Winnipeg Art Gallery, Winnipeg, Man.
 Regina College Gallery, Regina, Sask.
 Edmonton Museum of Arts, Edmonton, Alta.
 Vancouver Art Gallery, Vancouver, B.C.
 Arts Centre of Greater Victoria, Victoria, B.C.

Other Art Organizations.—The leading art organizations of national scope, exclusive of museums and art galleries, include the following:—

- Association of Canadian Industrial Designers
- Canadian Arts Council†
- Canadian Group of Painters
- Canadian Guild of Potters
- Canadian Handicrafts Guild
- Canadian Museums Association‡
- Canadian Society of Graphic Arts
- Canadian Society of Painter-Etchers and Engravers
- Canadian Society of Painters in Water Colour
- Canadian Society of Landscape Architects and Townplanners
- Community Planning Association of Canada
- Federation of Canadian Artists
- Royal Canadian Academy of Arts
- Royal Architectural Institute of Canada
- Sculptors Society of Canada.

The National Gallery of Canada.—Founded in 1880 by the Marquis of Lorne, the National Gallery at first served only as an exhibition gallery. Provided with an Advisory Arts Council in 1907, and first incorporated under a Board of Trustees in 1913, it has assembled a permanent collection mainly during the past 40 years. This collection of pictures and sculpture, prints and drawings, representing the styles, past and present, of various parts of the world, was assembled for public enjoyment, study, and the improvement of arts and industrial products, and as the necessary basis of a program of art education. The National Gallery Act, amended in 1951, gives the institution a larger Board of Trustees and other advantages.

The collection of the National Gallery today is of international repute and is accessible to the whole country by means of catalogues, photographs, colour reproductions and, to a limited extent, by loans. The Canadian section, naturally the most inclusive, is the best available source for the study of Canadian art. Each year, examples of the best contemporary work are added, along with those of earlier periods.

The National Gallery conducts a program of extension work throughout the country. The majority of exhibitions are available to the entire country and are widely circulated. About 30 such exhibitions are toured and as many as 200 separate showings have been held annually under the auspices of the National Gallery of Canada. In addition individual loans of material from the collection are made to centres in many parts of the country each year. In this way original works of art are constantly being brought to the attention of the public. Sets of reproductions are also sent on tour of localities that have not the facilities for handling originals.

* A complete list of Canadian art museums, societies and schools is included in the Canadian section of the current issue of the *American Art Directory* (R. R. Bowker Co., New York).

† An account of the Canadian Arts Council and a list of its constituent bodies appears in the 1951 Year Book, p. 308.

‡ Formed in 1947 with the object of improving the services of museums as educational institutions by promoting co-operation among themselves, by exchange with other countries and by the training and securing of expert staffs.

An Industrial Design Division has been set up as the result of public interest in bringing the design of Canadian goods up to the best international standards and in fostering distinctive Canadian designs and a number of exhibitions on Canadian industrial art have been held in various parts of the country. The Design Centre in the Daly Building, Ottawa, serves as an exhibition centre and as headquarters for the national program in industrial design sponsored by the National Gallery.

Other methods of education in the arts apply more specifically to young people and are designed, in part, to supplement regular school work. The Gallery provides written lectures illustrated by lantern slides on all aspects of art history, reproductions of paintings with introductory texts for art appreciation, school broadcasts, classes for school children at the Gallery, exhibitions of children's art, conducted tours of the Gallery's collections and educational demonstrations. Lecture tours by well known authorities are also held throughout Canada.

The National Gallery also maintains a library of art films. These as well as the facsimile colour reproductions and silk screen prints published by the National Gallery are listed in the free leaflet, *Reproductions, Publications and Educational Material*. In connection with the CBC school broadcasts on Canadian artists, the National Gallery distributes small colour reproductions to school children in all parts of the country. The magazine *Canadian Art*, in the publication of which the National Gallery has taken a leading part, is widely distributed.

The *Report of the Royal Commission on National Development in the Arts, Letters and Sciences* made recommendations for the extension and improvement of the Gallery's exhibition and education services; increases in funds, staff and facilities; maintenance or increase of appropriations for acquisitions; and a new building containing adequate facilities for display, storage, circulation of exhibitions and conservation of paintings. Many of these recommendations are being carried out and new quarters, to be known as the Lorne Building, are now under construction.

Further details concerning recent purchases, exhibitions and lecture tours arranged by the National Gallery are contained in the *Annual Report of the Board of Trustees*.

Section 2.—The Educational and Cultural Functions of the National Film Board*

The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its establishment the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film producing and distributing organization whose films about Canada are seen wherever people may freely assemble. The Board also produces and distributes filmstrips and still photos on Canadian themes in accordance with its primary function outlined in the Act "to initiate and promote the production and distribution of films in the national interest".

Films and filmstrips are being more widely employed as adjuncts to formal teaching in schools and universities. In the fiscal year 1956-57 there were 105,970 showings in schools and universities of films made or distributed by the National Film Board. Films produced by the Board are also shown in commercial theatres and on television in Canada and abroad. Items particularly designed for theatre use include the *Canada Carries On* and *Eye Witness* series in English (*En Avant Canada* and *Coup d'Oeil* in French) as well as newsreel features. Distribution of these usually is arranged through the major film distributing organizations, whose facilities are world-wide.

An increasing proportion of the Board's productions are being shown by television in Canada and abroad. A weekly series, *Perspective* (*Panoramique* in French) is televised nationally by CBC-TV, and local TV stations have constant recourse to individual films from the Board's general production. Abroad the principal televising of the Board's films takes place in the United States.

* Prepared, under the direction of the Government Film Commissioner, in the Information and Promotion Division, National Film Board, Montreal, Que.

The non-theatre program in Canada is based on a nation-wide system of film circuits, film councils and libraries and is deeply rooted in community activities. In the year ended Mar. 31, 1957, no less than 474 film councils—voluntary groups promoting wider use of documentary films—were in existence and 460 film libraries and depots assisted in the circulation of thousands of prints.

Canada's story on film is also being told abroad. In addition to commercial distribution through theatres and television, non-commercial circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board offices in London, England, New York and Chicago in the United States and New Delhi in India, as well as through libraries operated by various educational agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with Canada, aiding better international understanding.

The National Film Board maintains a library of more than 100,000 still photographs, which are available to magazines, newspapers and other periodicals wishing to present current information about Canada.

Section 3.—The Educational and Cultural Functions of the Canadian Broadcasting Corporation*

Many hours of educational or semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation in the English and the French languages. Whether these programs are directed to children or adults, entertainment is combined with information whenever possible. Spoken-word programs cover a very wide range of interests and are presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music.

Pre-school Broadcasts.—Though many story programs for pre-school-age children are broadcast purely as entertainment, a special series has been developed to give young children, particularly in remote areas, many of the benefits of kindergarten training. This series, *Kindergarten of the Air*, is broadcast Monday to Friday for children from three and a half to six years of age. Planned with the advice of kindergarten experts and representatives of the Canadian Home and School Federation, the Federation of Women's Institutes and the Junior League, it includes stories, songs, simple games, keeping-fit exercises, information about animal life and nature study, and encourages good habits of hygiene, eating and relaxation. The program is intended primarily for home listening but has been found useful in many organized kindergarten groups and classes.

School Broadcasts.—In an average school year, more than 1,000 school programs, mostly in dramatized form, are broadcast to all parts of Canada. The CBC provides facilities for thirty-minute daily programs specifically planned by Departments of Education to meet classroom requirements. These supplementary aids help teachers to stimulate student imagination and strengthen motives for study. The National School Broadcasts series are planned by the National Advisory Council on School Broadcasting to promote among students a stronger consciousness of Canada and its achievements. During the 1956-57 season, seven such series were planned for students from Grade 4 to senior high school. These were: *Voices of the Wild*, on Canadian wildlife; *Look to the North*, a series to give students a wider, up-to-date knowledge of Canada's increasingly important Arctic region; *They Explored Canada*, a series dramatizing outstanding events in Canadian history; *Hamlet*, a full-length performance of the Shakespearean drama; *Commonwealth Roundup*, comprising four programs on interesting aspects of other Commonwealth nations with specially recorded effects contributed by the broadcasting organizations in the United

* Prepared under the direction of J. A. Ouimet, General Manager, Canadian Broadcasting Corporation, Ottawa. Other aspects of CBC services are outlined in Chapter XX.

Kingdom, Australia, South Africa and India; *Canadian Legends*, a series of five broadcasts in which a new approach to music appreciation was used—a composer, Peter Tchaikovsky, tells about his life with particular emphasis on the music of his three ballets, *The Swan Lake*, *The Sleeping Beauty* and *The Nutcracker*.

The first experimental television programs for school use were presented during November 1954, and a second series in April 1956. The second series consisted of fifteen telecasts planned to provide a visual supplement to classroom studies in social studies, language, science and art. They were divided into three grade levels—2 to 4, 5 and 6, and 7 to 10. They were presented in an early afternoon period and carried over a network of 29 CBC and privately owned stations. Teachers were supplied in advance with a manual giving instruction on how to use the telecasts. Approximately 1,850 classes with 62,500 students, covering all ten provinces, viewed the second series. In the report on their evaluation published by the CBC under the title *School Television in Canada*, the National Advisory Council on School Broadcasting concluded that "television has definite value as a teaching aid in the school classroom"; that the programs should be closely correlated with the curriculum; and that further experiments should be undertaken at the provincial level.

Adult Education.—Programs of an adult education nature are presented frequently by the CBC on its radio and television services. In the planning of these programs co-operation is received from various educational organizations. The CBC is an active participant in the work of the Joint Planning Commission, a body established by the Canadian Association for Adult Education for exchange of information and co-ordination of plans for adult education in Canada.

Radio Programs.—*Citizens' Forum*, which has been telecast for the past two years, is a round-table program on which a panel of informed speakers who hold varying viewpoints discuss important issues of the day. It is arranged jointly by the Canadian Association for Adult Education and the CBC. Its French counterpart, *Les idées en marche*, which is carried on television as well as radio, is planned in co-operation with La Société Canadienne d'Éducation des Adultes. Similar types of programs prepared specially for rural listeners are *National Farm Radio Forum* and *Le choc des idées*, arranged by CBC in co-operation with the Canadian Federation of Agriculture and the Canadian Association for Adult Education. All these forum programs are heard by organized listening groups, which continue the discussion of the topic at the conclusion of the broadcast.

For the past six summers the evening sessions of the Couchiching Conference have been broadcast. This week-long conference, organized jointly with the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions. Other programs of an educational nature are *Cross Section*, a series of radio documentaries dealing with economic and social questions; various dramatized series in the field of human relations and mental health; *Science Review*, which examines important discoveries in the field of the natural sciences and their branches; *Business and Labour Review*, designed to inform listeners of developments in Canada's economic life; *Anthology*, a literary program with emphasis on Canadian writers; and *Trans-Canada Matinée*, a daily afternoon program including informative talks and commentaries designed specially for the woman in the home. On the French network *Les voisins d'en face*, prepared in conjunction with L'École de Parents, presents a series of programs relating to parents and children; and general questions sent in by parents are answered by psychologists in the series *Le Courrier de radio-parents*. For women listeners, the daytime program *Fémina* is presented three times a week.

The French network also broadcasts a number of weekly programs dealing with fine arts, music, literature, theatrical arts, sciences, religion and philosophy, under the auspices of *Radio-College*. These broadcasts are not designed for classroom use, being of a more adult nature than the School Broadcasts on the English-language networks and scheduled, in the main, for other than school hours.

In addition, talks on a wide range of subjects including international affairs, Canadian history and community activities are broadcast regularly over the various networks.

Television Programs.—In addition to *Citizens' Forum*, programs which are carried regularly on both radio and television are *Press Conference*, in which people who make the news are questioned by those who report it; and *Fighting Words*, in which guest experts in various fields discuss controversial quotations sent in by viewers.

Open House, a daily program for women, presents information on a wide variety of commodities and services, and interviews with people of note. Important world news of the preceding week is discussed by a panel each Sunday night on *This Week*. *Explorations*, a series of drama documentaries which examines questions in the fields of sociology and the natural sciences, was one of seven CBC programs to win First Awards at the 1957 Exhibition of Educational Radio and Television Programs at Columbus, Ohio. Programs in the field of parent-education and mental health are also telecast.

Portions of the afternoon sessions of the Winter Conference of the Canadian Institute on Public Affairs were telecast. This three-day weekend conference examined sociological questions in open meetings and group discussions.

On the French network *C'est la vie* investigates various professions and callings; *Pays et merveilles* presents illustrated discussions of life in other countries; and *Profil d'adolescents* considers topics and problems of interest to teenagers.

Section 4.—The Canada Council

On Feb. 15, 1957, the House of Commons passed an Act for the Establishment of a Canada Council for the Encouragement of the Arts, Humanities and Social Sciences. The continuing objects of this body are to foster and promote the study and enjoyment of, and the production of works in, the arts, humanities and social sciences. The expression, "the arts" is defined by the Canada Council Act as: architecture, the arts of the theatre, literature, music, painting, sculpture, the graphic arts, and other similar creative and interpretative activities. The Council, in furtherance of its objects, may (a) assist, co-operate with and enlist the aid of organizations, the objects of which are similar to any of the objects of the Council; (b) provide a scheme of scholarships, fellowships and other grants to persons in Canada for study or research in the arts, humanities and social sciences in Canada or elsewhere, and to persons in other countries for study and research in the same subjects in Canada; (c) make awards to persons in Canada for outstanding accomplishment in the arts, humanities and social sciences; (d) arrange for and sponsor exhibitions, performances and publications of works in the arts, humanities and social sciences; (e) exchange with other organizations or persons and with other countries knowledge and information respecting the arts, humanities and social sciences; (f) arrange for representation and interpretation of Canadian arts, humanities and social sciences in other countries. In addition, the Canada Council may be assigned by the Governor in Council such functions and duties in relation to the United Nations Educational, Scientific and Cultural Organization (UNESCO) as he considers desirable.

The Council is a corporation consisting of a Chairman, a Vice-Chairman and nineteen other members, all appointed by the Governor in Council. The Chairman and Vice-Chairman are appointed for terms not exceeding five years and the other members for terms of three years each. After serving two terms, members of the Council, including the Chairman and Vice-Chairman, are not eligible for re-appointment during the twelve months following completion of the second term. The principal officers of the organization are the Director and the Associate Director, also appointed by the Governor in Council, the Treasurer and the Secretary. The Council is not an agent of the Crown, but its officers and employees are considered to be employed in the Public Service for the purposes of the Public Service Superannuation Act. The Council is deemed to be a charitable organization in Canada.

The continuing work of the Council will be financed by income from a permanent Endowment Fund of \$50,000,000 and by a University Capital Grants Fund of \$50,000,000, both to be paid out of the Consolidated Revenue Fund. The latter Fund and the income it earns will be completely expended by the Council over a specified term of years. This Fund will enable the Council to make grants to universities and other institutions of higher learning by way of capital assistance in respect of building projects, with the following limitations: (a) a grant for any one project may not exceed one-half the total expenditures made in respect of that project; (b) in any province the aggregate of the grants made may not exceed an amount that is in the same proportion to the aggregate amount credited to the University Capital Grants Fund as the population of the province (latest census) is to the aggregate population of the provinces in which there is a university or other similar institution of higher learning. The Canada Council is also permitted to expend and administer any gifts and bequests it may receive.

To aid and advise the Council in making, managing and disposing of investments under the Canada Council Act, an Investment Committee has been set up consisting of the Chairman of the Council, one other member of the Council designated by the Council, and three members appointed by the Governor in Council. Proceeds from the sale or other disposition of any investments made out of the Endowment Fund or the University Capital Grants Fund are credited to the Fund out of which the investment was made. Investments out of money standing to the credit of the University Capital Grants Fund are made only in bonds or other securities of, or guaranteed by, the Government of Canada.

The Governor in Council appoints a member of the Queen's Privy Council for Canada to whom at the end of each fiscal year the Chairman reports all proceedings under the Canada Council Act for that fiscal year, including the financial statements of the Council and the Auditor General's report thereon. Provision is made for a review of these reports by Parliament.

Section 5.—Library Services

The National Library.—The National Library of Canada, authorized by the National Library Act of June 18, 1952 (1 Elizabeth II, c. 330), came into existence formally on Jan. 1, 1953. The work formerly carried on by the Bibliographic Centre and the staff of the Centre were then absorbed by the National Library, which came under the administration of the Secretary of State.

The Act provides for the establishment of an Advisory Council consisting of 15 members, including at least one representative from each of the ten provinces; the appointment of a National Librarian, an Assistant Librarian and other personnel. Duties of the National Librarian include the establishment of a National Union Catalogue listing the books in every important collection in Canada; the purchasing of book stock; and the publication of a National Bibliography listing books published in Canada, written by Canadians, or of special interest to Canadians. The Act requires two copies of each book published in Canada to be supplied to the National Librarian within one month of the date of publication; one copy of expensive books must be deposited.

The site has been selected and working plans are being prepared for the National Library building at Ottawa. The acquisition of book stock is limited until permanent quarters are available but activities in other departments of the Library reflect noteworthy progress. The coverage of *Canadiana*, a bilingual monthly publication listing new Canadian publications, has been expanded to include those issued by all provincial governments. By Dec. 31, 1956, individual library catalogues representing about 7,000,000 volumes in 122 libraries had been microfilmed for the National Union Catalogue. In addition the library has assumed the duty of receiving, registering and acknowledging all books deposited under the terms of the Copyright Amendment Act.

Public Libraries.—Public library service in Canada includes main libraries and their branches in metropolitan areas—sometimes augmented by bookmobile service to outlying districts—small association libraries in villages and hamlets, regional service on a county or wider basis, and the use of boats and the mails to supply remote rural areas. Through these facilities, 75 p.c. to 80 p.c. of the population receive library service.

Preliminary statistics of public library operations for the year 1956 appear in Table 1. These cover the activities of 825 public libraries in Canada.

1.—Summary Statistics of Public Libraries by Province 1956

Province or Territory	Libraries	Volumes	Circulation	Borrowers	Full-Time Staff	Trained Staff ¹
	No.	No.	No.	No.	No.	No.

Totals.....	825	9,785,987	35,423,236	2,026,211	2,003	647

¹ Librarians with Bachelor of Library Science degrees.

Of the 825 libraries surveyed in 1956, 101 were in cities of 10,000 population or over, and these employed the bulk of the full-time staff members of all public libraries. Median annual salaries in city libraries varied with the size of the city as follows:—

<u>Staff</u>	<i>Cities with Populations of—</i>		
	<i>10,000- 24,999</i>	<i>25,000- 99,999</i>	<i>100,000 Or over</i>
	\$	\$	\$
Chief librarian.....	3,771	4,929	6,750
Deputy chief librarian.....	3,583	4,333	5,250
Head of branch or division.....	3,400	3,868	4,212
Other librarians.....	3,083	3,292	3,569
Other professional staff.....	2,250	3,188	2,792
Library assistants.....	1,881	2,039	2,439
Clerical staff.....	1,500	2,063	2,149

In addition to the primary task of circulating reading material, public libraries undertake varied special services. City libraries in 1956 lent 104,235 films and 116,474 records, organized 166 art exhibits, presented 293 radio and drama shows and had 11,317 public film showings with total attendance of over 3,000,000 persons. About 4,741 story hours for children were presented, usually on Saturday mornings.

Regional Library Service.—Regional library service, or an adaptation thereof, now functions in Newfoundland, Prince Edward Island, Nova Scotia, Ontario, Saskatchewan, Alberta and British Columbia. In addition, the first regional library supervisor has been appointed in New Brunswick to organize a regional system originating in Moncton and designed eventually to provide library service for the counties of Westmorland, Albert and Kent. In February 1956, a program of provincial grants to regional libraries was announced in Manitoba and the Provincial Library is fostering regional library development in that Province.

OPERATING EXPENDITURES OF PUBLIC LIBRARIES FOR SPECIFIC CALENDAR YEARS

Summary statistics for the regional libraries in operation are given in Table 2.

¹ Includes figures for Newfoundland Travelling Library.² Excludes juvenile libraries.³ Organized in November 1956.⁴ Includes figures for Gosling, Regional, and Service by contract with Thunder Bay District.

Academic Libraries.—The 1953 Survey of Libraries covered 263 academic libraries which contained about 7,630,000 volumes, employed 545 full-time and 615 part-time personnel. Of all the employees 290 were trained in library science.

Government Libraries.—The 102 Federal Government libraries covered by the 1953 Survey reported 2,067,430 volumes and the 99 provincial government libraries reported 1,389,516 volumes. The federal libraries employed 345 full-time staff and the provincial libraries 162.

Business, Professional and Technical Libraries.—The 131 libraries operated by business, professional and technical societies and establishments in 1953 reported 774,629 volumes in stock. Two-thirds of these libraries reported full-time staff numbering 253 persons.

Section 6.—Canada and the United Nations Educational, Scientific and Cultural Organization

In the words of its constitution, the purpose of the United Nations Educational, Scientific and Cultural Organization (UNESCO) is "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms".

Total membership in the Organization at the beginning of 1957 numbered 79 states. The structure of the Organization includes three principal organs: (a) the General Conference; (b) the Executive Board; and (c) the Secretariat. The General Conference is the policy-making body of the Organization. It meets every two years and its main functions are to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period.

At the General Conference held in New Delhi, India, from Nov. 5 to Dec. 5, 1956, decision was reached to launch three major projects: the extension of primary education in Latin America; scientific research on arid lands; and mutual appreciation of the cultural values of the Occident and the Orient. The Conference approved a total budget of \$22,679,000 for the years 1957 and 1958 to be applied to common services and administrative expenses as well as to UNESCO's seven program areas—education, natural sciences, social sciences, cultural activities, mass communications, technical assistance and exchange of persons. Canada's share in this budget is \$685,485 or about 3 p.c. of the assessment level.

Both governmental and non-governmental organizations in Canada are interested in, and contribute to, UNESCO program activities. During the period under review, Canadians either as individuals or as organizations attended a number of UNESCO-sponsored meetings and seminars, contributed information to a variety of UNESCO publications and participated in UNESCO technical assistance missions and projects. Several UNESCO travelling art exhibitions toured Canada; International Museums Week was observed by museums and galleries across the country, and training programs were organized for Fellows from under-developed countries.

In the absence of a National Commission for UNESCO, the Department of External Affairs has carried out the essential liaison functions between the various official and voluntary agencies concerned with the Organization's program. However, pursuant to Sect. 8 of the Act passed at the Fifth Session of the Twenty-second Parliament for the establishment of a Canada Council for the Encouragement of the Arts, Humanities and Social Sciences, the Governor in Council assigned to the Canada Council certain functions in relation to UNESCO and the Canada Council, on Aug. 21, 1957, announced the establishment of a National Commission for UNESCO.

PART III.—SCIENTIFIC AND INDUSTRIAL RESEARCH

Section 1.—The National Research Council*

Forty years of scientific research on a national basis have made it possible for Canada to keep pace with the exploitation of its own vast resources as well as with the accelerated economic development noticeable in all parts of the world.

History and Organization.—Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the Honorary Advisory Council for Scientific and Industrial Research under a Committee of the Privy Council. Provision was made for the planning and integration of research work, organization of co-operative investigations, postgraduate training of research workers, and prosecution of research through grants-in-aid to university professors. This was the basis of the Council's work from 1916 to 1924.

* Prepared by John R. Kohr, Public Relations Branch, National Research Council of Canada, Ottawa.

A Special Committee of Parliament, appointed to study a recommendation for establishing national laboratories, endorsed the proposal and the Research Council Act was revised by Parliament in 1924. Temporary laboratories were secured and research on utilization of magnesian limestones for refractories was carried out so successfully that a wartime industry, established during World War I, was re-established on a large scale. As a result of this achievement the Government, in 1929-30, provided funds for new laboratories.

The National Research Building on Sussex Drive, Ottawa, was opened in 1932; and in 1939 construction was begun of the aerodynamics building on a 130-acre site on the Montreal Road just east of the city. Later, other buildings were erected on this site, including woodworking and metalworking shops and separate laboratories for research on engines, gas and oil, hydraulics and structures. These facilities have since been enlarged and extended and new buildings have been provided for engineering, low-temperature studies, and high-speed aerodynamics. In 1952 a cosmic ray laboratory, a thermodynamics building, and a large structure to house the Division of Applied Chemistry were added; in 1953 a modern laboratory was constructed in one of the Montreal Road service tunnels for the exact measurement of surveyors' tapes and the Building Research Centre was completed. The same year development began on a new 250-acre site on the opposite side of the road, where the new headquarters for the Radio and Electrical Engineering Division was constructed. An underpass connects the two areas.

A Prairie Regional Laboratory built on the University of Saskatchewan campus has been in operation since June 1948 and an Atlantic Regional Laboratory, on the campus of Dalhousie University at Halifax, N.S., was opened in June 1952. The Division of Building Research has established one of the most northerly building research stations in the world at Norman Wells, N.W.T. Completing its long-term plan for regional activities, the Division has also established a small Pacific Regional Station at Vancouver, in co-operation with the British Columbia Research Council.

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour or research in one of the basic natural sciences. Many of the members are drawn from the science departments of Canadian universities.

The Council's scientific and engineering activities are organized in nine divisions and two regional laboratories, each with its own director. Five laboratory divisions are concerned with fundamental and applied studies in the natural sciences: applied biology, applied and pure chemistry, and applied and pure physics. Three others are devoted chiefly to engineering work—building research, mechanical engineering, which includes aeronautics and hydraulics, and radio and electrical engineering. The Division of Medical Research has no laboratories but awards grants-in-aid and fellowships tenable chiefly in the medical schools of Canadian universities.

Links with Industry.—In addition to its basic research functions, the Council operates a Technical Information Service. Through a trained research staff, using the extensive library facilities available to the Council, it is usually possible to provide any required information at very short notice. A free and constant flow of personnel and information is maintained between the Council laboratories and industrial laboratories, the aim being to have Canadian industry use the Council's laboratories just as the units of a large company use their own laboratories as a source of scientific information and assistance. The Council also undertakes for any firm, under contract, research problems that cannot be solved by private consulting and testing laboratories and, in return, obtains assistance from many companies. The Council has long-standing and intimate contacts of this co-operative kind with many Canadian industries in various fields.

Associate committees were established by the National Research Council early in its history and have been continued to date. Hundreds of specialists have accepted invitations from the Council to serve on committees and have brought their knowledge and experience

to bear on the solution of research problems put before them. Members of committees give their time and effort to these special studies without charge and their assistance is a source of great strength to the Council.

Foundation Aspects.—Assisted research grants have been made by the Council since its inception in 1916. These awards are given to heads of university science departments to purchase needed equipment and to employ junior helpers, usually students. Aid of this kind has been of considerable assistance in enabling the universities to put into operation the excellent graduate schools that now exist in Canada. In 1956-57 more than \$3,500,000 was provided out of Council funds for basic research at Canadian universities.

Scholarships and grants in aid of research are awarded annually by the National Research Council. Scholarships awarded in science and engineering include Bursaries and Studentships which have values of \$800 and \$1,200 respectively for the academic year, to which a summer supplement of \$800 may be added. In addition, Special Scholarships valued at \$2,000 a year and Postdoctorate Overseas Fellowships at \$2,700 (single) and \$3,500 (married) are offered. The Council also offers Graduate Medical Research Fellowships valued at from \$2,000 to \$5,000, depending upon academic qualifications and research experience. A limited number of Medical Research Associates are also appointed to research positions in the medical schools of Canadian universities. Graduate Dental Research Fellowships are also available. In 1956-57, 310 different awards were made, totalling \$450,450.

Since 1948, the National Research Council has awarded Postdoctorate Fellowships, in open competition to Canadians and nationals of other countries, which are tenable in the Council's own laboratories. The diversity of training and experience brought to the laboratories by these keen young scientists has had such a stimulating effect on the research effort that the program has been further expanded in recent years; Fellowships are now tenable in science departments of Canadian universities and in the laboratories of other Federal Government Departments, such as Agriculture, Mines and Technical Surveys, and National Health and Welfare. Almost 200 of these awards are being held at the present time, mostly in the fields of chemistry, physics and biology.

Principal Activities in 1956-57*

The activities of each Division are described in outline only, with occasional brief examples. The work of the Atlantic and Prairie Regional Laboratories is treated separately at pp. 379-380.

Applied Biology.—Much of the work of this Division is undertaken in co-operation with industry or for Government agencies, although some fundamental work is done on the metabolism and chemical composition of living organisms.

Milder pulping agents have increased pulp yields by producing semi-chemical pulps which have a higher proportion of the hemicellulose material of the wood. Therefore the structure, properties and behaviour of the hemicelluloses of common pulpwoods are being examined so that the pulp and paper industry may more readily solve its manufacturing problems when using the new semi-chemical pulps. So far, the hemicelluloses of jack-pine, white spruce and beech wood have been studied.

Because blue-green algae have sometimes been implicated in deaths of cattle and other animals, different species and strains of algae have been examined. Two out of nine strains of a single species proved highly toxic; twelve other species or strains were non-toxic. The toxin appears to be produced inside the algal cells and must be released before it is fully effective. Environmental factors greatly affect both the production and release of the toxic material.

Other work concerns the liquid immersion freezing of poultry; the effects of freezing on the enzymes in milk; the lipoproteins of hen egg yolk; and the effects of different bacteria on casein, the principal protein in milk.

* Of particular current interest in the field of scientific research is the International Geophysical Year. Canada's part in the program is dealt with in detail at pp. 35-38.

Applied Chemistry.—The Division of Applied Chemistry is concerned with the best uses of Canadian resources and with chemical problems of wide general interest.

The oxidation of iron and its alloys is an extremely complex problem and is estimated to cost Canada more than \$3,000,000 annually. Studies are being made of the mechanism of corrosion in aqueous solutions and of the oxidation of metals at high temperatures. At the same time, while the corrosion group is working to *prevent* oxidation, several other groups are endeavouring to *enhance* the oxidation of certain chemicals such as ethylene. The product is a very active chemical—ethylene oxide—and the starting point of many other useful materials such as antifreeze. A calcium silver catalyst shows considerable promise.

Work on rain repellents for aircraft wind screens has been brought to a conclusion with the development of a satisfactory one-coat material suitable for most applications. Lignin has been successfully substituted for carbon black in preparing a tire-tread stock. Work on thermoplastics and rubber adhesives for bonding rubber to metal is being continued.

One of the functions of the textile laboratory is to advise the Canadian Research Institute of Launderers and Cleaners, with which the Council has a formal agreement. The aim of this co-operation is to maintain a high standard of operation in Canadian cleaning establishments. Assistance is also given to government departments on such problems as the moth-proofing, rot-proofing and moisture-proofing of textiles. Synthetic detergents are also being examined.

Other industrial problems under investigation include the possible application of the spouted bed technique to industrial drying problems. A pilot model of a sedimentation device has been constructed and successfully operated. The Applied Chemistry Division also works on colloids, analytical chemistry, high polymer chemistry, metallurgical chemistry and physical organic chemistry.

Pure Chemistry.—The Division of Pure Chemistry is organized around a nucleus of outstanding Canadian chemists who direct about twice their own number of young postdoctorate Fellows from all over the world. The work is long-range and fundamental. The products of pure curiosity seem very far removed from ordinary life but the Division's experts are frequently invited to speak to groups of applied chemists and other scientists employed in Canadian industry. They also lecture in universities.

There are thirteen sections in the Division: organic chemistry, mostly on the structure of alkaloids; organic spectrochemistry; organic synthesis; chemical kinetics and photochemistry; mass spectrometry; molecular spectroscopy; surface chemistry; thermochemistry; activated carbon, inorganic and general chemistry; intermolecular forces and physical properties; fibre research; chemistry of fats and oils; and general physical chemistry.

Applied Physics.—The work on applied physics is divided between research projects likely to have a practical value and the continual development of the fundamental standards on which measurements generally are based. All the fundamental physical standards for Canada are housed and serviced in this Division.

The various means developed of decreasing noise from suction rolls in paper mills are now receiving full-scale factory trials. Also, investigation into anomalous drying of paper in the mill has led to recommendations of corrective measures which are now being tested.

Experiments to determine the absolute value of the acceleration due to gravity ("g"), measured by timing the rate of fall of a calibrated rule, show excellent reproducibility. Wavelengths proposed as the new international standard of length are being investigated and new sources for more precise wavelengths are being developed. Friction of inflated rubber tires on ice is being measured and investigations are being continued to develop a good method for testing the worth of winter garments in cold winds.

Mapping experiments carried out under the auspices of the International Society of Photogrammetry were directed by the Photogrammetric Research Section. The airborne-controlled method of aerial triangulation developed by the Section has been studied over hilly terrain and found to be both accurate and efficient even under such difficult conditions. Investigation of radar profiles was extended to high altitudes—of from 25,000 to 30,000 feet. Non-topographical photogrammetry is being advanced by the design of distortion-free lenses for short-distance photography.

In connection with X-rays and nuclear radiations, new instruments have been developed which have eliminated the difficulties of interpretation encountered when output measurements of Cobalt-60 Beam Therapy Units are made with commercial instruments.

Pure Physics.—Investigation is under way on cosmic rays, solid state physics, spectroscopy, X-ray diffraction and theoretical physics. Although the findings on various fundamental problems do not have immediate application, they advance the frontiers of knowledge and supply the basis for further progress in the applied fields.

Four cosmic ray stations have been set up to operate throughout the International Geophysical Year which started July 1957—at Resolute in the Arctic, at Churchill, Man., at Ottawa, Ont., and a new laboratory on top of Sulphur Mountain near Banff, Alta.

A recent highlight in connection with low temperature and solid state physics was the international conference on Electron Transport in Metals and Solids, sponsored by the International Union of Pure and Applied Physics and held at the National Research Council Building. The proceedings were published as a special issue of the *Canadian Journal of Physics*.

Investigation of the spectra of simple molecules continues to form the major portion of the work on spectroscopy, but a start has also been made on studies of atomic spectra.

Programs of crystallographic calculations, devised for the electronic computer FERUT, are now in routine use and are being made available to other X-ray crystallographic laboratories in Canada. Additional powder patterns have been included in the standard file and a number of samples have been examined by the X-ray diffraction powder method for other laboratories. An improved calculation of the electrostatic correction for white dwarf stars has been made with the help of the method of Bohm and Pines for the collective motion of electrons in metals.

Building Research.—Recent field work has included: co-operation in Western Canada with oil companies and others in a pioneer study of access over muskeg; studies of transformer noise which often distinguishes electrical substations, a problem that has been solved in close association with The Hydro-Electric Power Commission of Ontario; housing studies in association with Central Mortgage and Housing Corporation, which the Division continues to serve as research wing for technical housing problems. Laboratory investigations have been made recently on double windows and, to develop economical standard roof-truss design, on wooden roof trusses for small houses. A chimney laboratory has been placed in operation.

The technical and secretarial work for the National Building Code is carried out by the Division for the Associate Committee on the National Building Code. A short version of the main Code has been published in pocket-book form and more than 7,000 copies have so far been distributed. A French translation of the main Code is now available.

Jointly with the Trans-Canada Highway Division of the Federal Department of Public Works, a start has been made on avalanche research and prevention in the Rocky Mountains; in co-operation with the Alberta Department of Public Works, the Division helped in the acoustical design of the two new auditoria that have been built in Calgary and Edmonton; problems of winter construction have been studied in close association with the National Committee established for that purpose; basic studies on soil mechanics and on snow and ice are in progress.

A new suite of laboratories for paint research, a new sound chamber for studies of building acoustics and a new fire research building now under construction will extend the work of the Division.

Mechanical Engineering.—In addition to mechanical engineering, this Division embraces certain phases of hydraulic engineering and naval architecture and many branches of aeronautical engineering. The Division continues to work with the aircraft, shipbuilding, heavy engineering, chemical, and pulp and paper industries and to undertake work for government departments. It also functions as a source of supply of trained engineers and technicians for industry.

The Aerodynamics Section is devoted largely to classified defence projects. In particular, the low-speed and high-speed wind tunnels are engaged continuously on tests of models of several new aircraft under development by Canadian companies.

Work continued on several St. Lawrence Seaway projects to obtain design information in connection with navigation locks and river improvements. In the ship laboratory, the size of ships under study varied from naval escort vessels to small landing boats; problems included propeller design, vibration analysis, cooling water system analysis, and manoeuvring. Full-scale trials were carried out on a number of ships.

The major design effort of the Gas Dynamics Section was on a gas turbine unit suitable for railway traction. The engine laboratory had three principal projects: exhaust reheat of turbojet engines, anti-icing and cold tests of aircraft gas turbines, and improvement of test facilities. The main work of the low-temperature laboratory was directed to development of rotor de-icing equipment for helicopters. Projects of the fuels and lubricants laboratory included work on the evaporation of fuel sprays as applied to combustion of jet fuels, thermal stability of naval boiler fuels, and development of automotive brake fluids.

In the structures laboratory, the major effort was directed to the problem of swept wing aircraft flutter. Other fundamental work was done on the resistance of ship propellers to impact loading and on a design for airport beacon towers which could suffer decapitation without destroying the impacting aircraft. At the request of the Department of National Defence, the engineering laboratory developed and constructed an amphibious motor vehicle for safe travel on frozen lakes where thin patches of ice might not support the weight of an ordinary vehicle. The instruments laboratory designed and developed special instrumentation as required by other laboratories of the Division and, on occasion, by outside organizations.

Radio and Electrical Engineering.—About half of the Division's work consists of defence projects. The remainder of the program, on which information may be released, includes problems in electronics, radiophysics and electrical engineering. Where possible, emphasis is placed on applications of interest to Canadian industry. In the field of electronics the main projects include a remote fog-alarm control; a fog detection device; transistorized control of buoy lights; underwater television; location of crashed aircraft; etc. The motor vessel *Radel II* is an invaluable asset as a floating laboratory to test various radar devices and techniques. Electronic music is also a highly fruitful field of inquiry: a tape recorder has been designed especially for the production of new forms of music; an improved model of the electronic monophonic instrument, featuring improved pitch flexibility, is being built; development of the touch-sensitive organ is being continued.

The two sections of the Division most intimately connected with the International Geophysical Year are: upper atmosphere research which deals chiefly with observations of meteor showers; and the solar noise observatory where radio emissions from the sun have been observed daily for the tenth successive year.

Static electricity explosion hazards, instrument transformer calibration, high voltage research, dielectric research, and detection of flaws in paper are some of the projects in the electrical engineering field.

Medical Research.*—The chief function of the Medical Research Division, which marked its tenth anniversary in 1956, is to make grants and to award fellowships in the field of medicine. For the year 1957-58, 151 grants totalling over \$500,000 were made to individual investigators in Canadian hospitals and universities. Twenty-one Graduate Medical Research Fellowships were awarded for the same year to enable medical graduates to obtain further training in fundamental research.

In addition to seven consolidated grants, 145 grants-in-aid of research to the amount of \$652,056 were awarded in 1955. Forty-one of these grants were for new projects. Medical research was initiated and stimulated by 22 grants given to 20 investigators who had not been supported previously by the Division. More than 170 reports on work thus supported were reviewed.

A new category of Medical Research Associate has been created. The candidate, who must have a doctorate—though not necessarily in medicine—is nominated by a university which must undertake to place him on the faculty and provide adequate facilities for his work. His teaching duties must be limited and he may expect to retain his appointment indefinitely, subject to the satisfaction of the Council and of the university. Six appointments to this new category have been made.

Atlantic Regional Laboratory.—The Atlantic Regional Laboratory studies the preservation and use of food products and some of the problems encountered by secondary industries in the area, such as the storage of several varieties of potatoes, drying of rock-wood, deposition of pitch from sulphite pulp mills in the Atlantic Provinces, and the manufacture of iron and steel. The explanation of deposition of pitch in pulp mills still remains doubtful and requires further study.

The manufacture of steel is a problem in the Atlantic region because high-phosphate ore from Newfoundland is being smelted by means of a high-sulphur coal from Cape Breton. Technical problems are many and are being attacked through studies on oxidation of carbon in steel; factors affecting the equilibria of various constituents, especially phosphorus, between molten iron and slag; and the nature and behaviour of the gases encountered in making steel. The resulting basic slag is high in both phosphorus and calcium and should therefore have a potential use as fertilizer. The main technical problem here is a cheap method of breaking up the slag.

Isinglass has been extracted from cod swim bladders and prepared in a highly purified state; it differs only slightly from similar material from mammalian connective tissues. A systematic survey of the chemical composition of peat from the larger bogs in the Atlantic Provinces is almost finished. This will permit the construction of profiles for various bogs and furnish a sound basis for estimating the resources available. The nature of slime in the 'white' water of pulp mills has been established; it is caused by the growth of numerous fungi associated with symbiotic bacteria. Commercial inhibitors were highly effective.

Prairie Regional Laboratory.—The applied work of the Laboratory is designed to promote and expand the use of agricultural products of the prairie region. Fundamental work includes studies on the properties and reactions of starches, sugars, proteins, fats and oils, and other plant constituents; on the physiology and biochemistry of living plants and of micro-organisms; and on the development of fermentations using a wide variety of nutrients.

Work on producing building boards from straw is now largely of an advisory nature. A local firm is currently building a \$3,000,000 plant in Saskatoon to produce fibreboard and hard board. Another successful investigation has resulted in the devising of a sedimentation method for classifying elevator dusts which is more accurate than the screening methods previously used. A new antifungal antibiotic has been isolated and found effective in large dilution against growth of yeasts, smuts and rust spores. Progress is being made in producing commercially important ergot alkaloids by cultivating ergot fungus in synthetic media.

* See also pp. 386-388.

An attempt is being made to produce protein feed supplements by growing micro-organisms on waste sulphite liquor or molasses media. Also, recent work has shown that vital gluten may be prepared from some low-grade wheat flours.

Administration.—The administration of the foregoing laboratories has now been organized as a Division of Administration and Awards, which exists only to serve the scientist. The five service units of this Division are: Awards and Committee Services (Awards, Committees, Publications, Research Journals); Administrative Services (General Services, Purchasing, Personnel); Information Services (Technical Information Service, Library, Public Relations Branch, and Liaison Offices in Ottawa, Washington, U.S.A., and London, England); Plant Engineering Services; and Legal and Patent Services. The latter Division works closely with Canadian Patents and Development Limited (*see p. 88*). An expert on economic research acts as special assistant to the Assistant Director, Information Services.

Section 2.—Research in the Atomic Field*

Atomic Energy of Canada Limited (AECL), a government-owned Crown company, operates Canada's main atomic energy centre near the town of Chalk River, Ont., 130 miles west-northwest of Ottawa. The company has a nine-man Board of Directors that includes representatives of private industry, public and private power companies, and the universities, and is engaged in four main activities: (1) the development of technology for economic atomic power; (2) fundamental scientific research in the atomic energy field; (3) operation of nuclear reactors and separation of nuclear fuels (plutonium and uranium-233); and (4) production of radioactive isotopes and associated equipment, such as Cobalt-60 Beam Therapy Units for the treatment of cancer.

The company is collaborating with the Canadian General Electric Company Limited and The Hydro-Electric Power Commission of Ontario (HEPC) in the building of an experimental atomic power station, to be known as NPD (Nuclear Power Demonstration), near Des Joachims, 12 miles up the Ottawa River from the Chalk River plant. The decision to build NPD followed a power reactor feasibility study, started late in 1953 and carried out by engineers of AECL, HEPC, the Montreal Engineering Company Limited, the Shawinigan Water Power Company, the British Columbia Electric Company Limited, and the Brazilian Traction, Light and Power Company Limited. The power reactor is expected to generate 20,000 kw. of electricity. The Nuclear Power Branch at Chalk River, the staff of which was recruited from several power-producing commissions and companies, has been carrying out preliminary design studies for a large atomic power station with an output of 200,000 kw. of electricity.

To ensure that the various publicly and privately owned utilities are kept fully informed of the progress being made, the Government set up in 1954 an Advisory Committee on Atomic Power Development on which the various power producers throughout the country are represented. The committee, which meets periodically at Chalk River, studies the research results obtained at that centre, receives complete information on the NPD station, and assists in evaluating the economic importance of atomic power in various regions of the country.

In 1955 an "industrial assistance office" was set up at Chalk River to create as wide as possible an interest on the part of private companies in the possible applications of atomic energy in general and of atomic power in particular.

Development of the Atomic Energy Program.—The program had its beginning in 1942 when it was decided to set up a Canadian-United Kingdom project in Canada, under the administrative control of the National Research Council of Canada. British, French and other European scientists doing nuclear research moved to North America early in World War II to work on an atomic weapon—the possibility of which became evident when O. Hahn and S. Strassman in Berlin, Germany, announced the first recognition of nuclear fission in 1939.

* Prepared by Clyde Kennedy, Public Relations Officer, Atomic Energy of Canada Limited, Chalk River, Ont.

The United States project used the more readily available graphite to moderate its reactors and the project in Canada was assigned the task of trying heavy water as a moderator so that all possible routes to the production of plutonium for bombs would be tried. In 1944 the Canadian-United Kingdom team moved from the University of Montreal, where preliminary studies had been carried out, to the site which was established on the Ottawa River, about five miles from the town of Chalk River.

On Sept. 5, 1945, ZEEP went into operation. It operated at a mere 10 watts but it made possible a study of the value of a heavy water natural uranium system and it has continued to be useful for studies of fuel rod arrangements. Two years later on July 22, 1947, the NRX reactor went into operation. It was then, and so remained for several years, the most powerful research reactor in the world. The NRX reactor still plays a leading role by making possible important experiments relating to the development of atomic power, enabling the fundamental properties of atoms and nuclei to be determined, and producing radioactive isotopes of high specific activity (i.e., the relation of the amount of radiation to a given weight of material). Both the United States and the United Kingdom are, like AECL, using NRX for atomic power studies. This reactor now operates at a power output of 40,000 kw. (a measure of the heat produced).

In 1946 the United Kingdom established its own atomic energy program and in the same year the Atomic Energy Control Act was passed in Canada "to make provision for the control and supervision of the development, application and use of atomic energy". This Act created the Atomic Energy Control Board.

The Chalk River project was operated on behalf of the Atomic Energy Control Board by the National Research Council until 1952 when a Crown corporation, Atomic Energy of Canada Limited, was established to operate the project on behalf of the Board. A 1954 amendment to the Atomic Energy Control Act requires AECL to report directly to the Cabinet Minister who is Chairman of the Committee of the Privy Council on Scientific and Industrial Research. The Atomic Energy Control Board continues to report to the same Minister.

The next stage in the Canadian program, following the creation of a separate United Kingdom program, consisted mainly of carrying on fundamental research at Chalk River, using the facilities of the two natural uranium heavy-water reactors. The need for a source of higher neutron flux for fundamental research and for engineering studies resulted in the decision in 1951 to build another natural uranium heavy-water reactor known as NRU. This reactor, placed in operation on Nov. 3, 1957, has a heat output of 200,000 kw., five times that of NRX. The NRU reactor has three main functions: the production of significant quantities of plutonium; the provision of advanced experimental facilities for fundamental research and for the testing of power station fuel-coolant systems; and the production of radioactive isotopes of high specific activity, particularly Cobalt-60 which is used in the treatment of cancer.

Activities of the Chalk River Project.—The principal function of this Project is to carry out fundamental research and preliminary engineering development. The Project provides the data which utilities and manufacturers need for a nuclear power program. The work is carried out by an Administration and Operations group and a Research and Development group. The former is responsible for general administration, the operation of the nuclear reactors and associated chemical process plants, the construction and maintenance of buildings, the provision of steam and auxiliary power for the project, and the correlation of the experience of the operating branches with the results obtained by the research branches to produce engineering information for major projects handled by outside organizations.

The activities of the Research and Development group which cover a wide field of fundamental and applied research in physics, chemistry, metallurgy, and biology, are carried out by four divisions: Reactor Research and Development, Chemistry and Metallurgy, Physics, Biology. These divisions conduct short-term and long-term investigations—the short term to provide the basic information required to design and operate

the first Canadian power reactors. A wide variety of possible reactor systems make it necessary to conduct extensive investigations, both mathematical and experimental, to determine which are likely to be the most economic and efficient. The longer term work, though mainly the responsibility of physicists and biologists, also involves the chemistry of substances which have become important (or have come into existence) only since the development of atomic energy.

The Reactor Research and Development Division is engaged in experiments and calculations required for the design of nuclear reactors for atomic power stations. Control systems for such plants and for the Chalk River reactors are being studied. The ZEEP reactor has been in constant use in determining the reactive efficiency and other characteristics of various fuel element arrangements. Many fuel samples have been tested in the NRX reactor under conditions simulating those which will exist in power plants. These experiments are providing essential information on the behaviour and suitability of different physical forms of the fuel, or different kinds of cladding to prevent corrosion of the fuel, and of heat transfer characteristics.

The Chemistry and Metallurgy Division includes a number of research groups which are making a co-ordinated attack on the problems of the preparation and processing of reactor fuel. The division develops fuel elements for the NRX and NRU reactors and for power reactors. Much of the work is being done in collaboration with the Department of Mines and Technical Surveys.

In the Physics Division work has continued on the study of nuclear structure, using the experimental facilities of the NRX reactor and the particle accelerators, such as the 3,000,000 electron volt Van de Graaff Generator. A 10-million volt machine, known as a Tandem Accelerator, will be installed at Chalk River in 1958. This new type machine, which consists of two Van de Graaff accelerators placed end to end horizontally, will make it possible to carry out research programs on heavy nuclei with an accuracy and efficiency never before possible.

The activities of the Biology Division include the control of radiation hazards, the development of decontamination methods, the study of uses of radioactive isotopes in biological research, and the investigation of the effects of radiation on living organisms.

Canada pioneered in the production of radioactive isotopes and the Chalk River project now produces a wide variety of isotopes for use in industry, agriculture and medicine. The high flux of NRX enabled AECL to produce relatively large quantities of Cobalt-60, with a high specific activity, for use in cancer therapy units. The combined production of NRX and NRU will be required to satisfy the demand from many countries for Canadian units.

The marketing of radioactive isotopes and associated equipment is handled by the Commercial Products Division of AECL with headquarters in Ottawa. Seventy-six cancer treatment machines, designed and built by the Division, had been installed in 13 countries by mid-1957.

Section 3.—Other Scientific and Industrial Research Facilities

Aside from the work of the National Research Council and Atomic Energy of Canada Limited, Canadian research is carried on by various federal agencies, provincial organizations, universities and industries. Several provinces in Canada have established Provincial Research Councils to stimulate and support research on problems having special provincial significance. The universities of course form an extremely important part of the Canadian pattern of research. Much of their work is along fundamental lines but practical problems are not neglected, especially those of regional interest.

All three types of institutions—federal, provincial and university organizations—have an interest in problems of industrial significance: this is part of the current Canadian pattern of research. Though many Canadian industries now possess research facilities—some of them quite extensive—the main bulk of industrial research to date has been done under government auspices.

Thus the unique problems of the country, particularly its large area coupled with a small population, have led to a typically Canadian organization of research, of which a very strong associate committee system is perhaps the most distinctive feature.

Subsection 1.—Federal Organizations

Although research by industrial concerns has been slow to develop in Canada, government research has expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's export trade, and secondly because of the more recent interest in the processing of these raw materials and the necessity of meeting the needs of national defence. Federal agencies involved in research include the Departments of Agriculture, Fisheries, Mines and Technical Surveys, National Defence, National Health and Welfare, Northern Affairs and National Resources, and Trade and Commerce; the National Research Council; and Crown corporations such as Atomic Energy of Canada Limited. A system of committees, with nation-wide representation, eliminates unnecessary duplication of work from these national research organizations.

The scientific work of the Department of Agriculture is described in Chapter IX of this volume, the work of the Defence Research Board in Chapter XXVIII, specialized work in scientific forest research in Chapter X, scientific services concerned with Canada's mineral resources conducted by the Department of Mines and Technical Surveys in Chapter XI, investigational work of the Department of Fisheries in Chapter XIII, research of the Canadian Wildlife Service of the Department of Northern Affairs and National Resources in Chapter I, the work of the National Research Council at pp. 373-380 and atomic research at pp. 380-382. The activities of the other federal agencies engaged in research are described briefly in the following paragraphs.

Department of National Health and Welfare.—The Department of National Health and Welfare supports both intramural and extramural research programs. Within the Department, the Food and Drug Directorate, Laboratory of Hygiene, Occupational Health Laboratory and various clinical services are engaged in scientific research in their respective fields. Special studies and surveys are conducted in social and medical economics by the Research Division. The extramural program consists of grants-in-aid of medical research at universities, hospitals and other research institutions from funds under the National Health Program. The Public Health Research Grant provides over \$500,000 per annum with allocations from the Mental Health, General Public Health, Tuberculosis, Cancer, Child and Maternal Health and Crippled Children's Grants making up approximately \$1,250,000 additional funds. To co-ordinate medical research programs, meetings are held by representatives of the National Research Council, Defence Research Board, Department of Veterans Affairs, National Cancer Institute and the Research Advisory Committee of the Department of National Health and Welfare. These have provided for reasonably clear definitions of the field of interest of each organization and have minimized uneconomical overlapping.

Grain Research Laboratory.—Rapid development of grain production in Western Canada led to the passing, in 1912, of the Canada Grain Act. This Act is administered by the Board of Grain Commissioners, a Crown corporation which reports to Parliament through the Minister of Trade and Commerce. The Board is responsible for control of the transportation, weighing, grading and warehousing of Canadian grain. Soon after its establishment, the Board encountered problems that required scientific study and a Grain Research Laboratory was established at Winnipeg, Man., in 1913.

The Grain Research Laboratory is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year and prepares, annually, certain information

required by the Board for administering the Canada Grain Act. Fundamental research is also undertaken; the program is directed toward increased understanding of what constitutes quality in cereal grains and towards improving the methods of assessing quality.

Subsection 2.—Provincial Organizations

The fact that only a few provincial research organizations exist does not indicate a lack of interest in research by the provinces. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems. Agriculture is particularly well covered because of its great importance as an export industry; the network of Federal Department of Agriculture laboratories and Experimental Stations, together with agricultural colleges and provincial research councils, provides this industry with a very well developed research service.

Nova Scotia Research Foundation.—This body was created by the Government of Nova Scotia in 1946 to give its people additional scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. It assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal burning equipment, the constitution and gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological and seaweed surveys as well as forest aphides, forest ecology and genetic studies and assisted studies on the nutrient cycles of lakes, on X-ray crystallography, and on pressures in underground strata. Its Geophysical Division is now equipped to undertake all types of magnetometric, gravimetric, resistivity, seismic and electromagnetic explorations while its Technical Services Division provides an ever-increasing assistance to industries of the Province. During the summer of 1956, 93 people were engaged on 27 projects.

Saskatchewan Research Council.—The Saskatchewan Research Council was established in 1947 for "research and investigation in the physical sciences as they affect the economy of the Province of Saskatchewan, and such particular matters as may be brought to its attention from time to time by the Lieutenant-Governor in Council". The term 'physical sciences' is given a broad interpretation to include biology, geology and engineering. Within this field the Council undertakes basic and applied research.

Up to the present the Council has functioned mainly by granting funds for approved research projects and awarding scholarships at the University of Saskatchewan. It has also conducted a technical information service with the assistance of the National Research Council. It is now entering a new phase and, in addition to its former activities, will employ a full-time staff in a new laboratory building located on the University grounds.

Research Council of Alberta.—The Province of Alberta set up a Scientific and Industrial Research Council in 1921, the promotion of mineral development within the Province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that setting up the National Research Council and is financed by Provincial Government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the Province. Investigations include studies on coal, the Athabasca oil sands, natural gas, geological research and surveys, soil surveys and irrigation research. The Council maintains a gasoline and oil testing laboratory and has a group of industrial engineers to provide scientific information to developing industry. The Council laboratories are located at the University of Alberta and include a \$750,000 research laboratory and pilot plant provided

by the Province of Alberta in 1955. The laboratories work in co-operation with the scientific departments of the University and the operations of the organization are controlled by a council of ten individuals representative of government, the University and industry. The various research projects are under the immediate supervision of advisory committees and the chairmen of these committees form the Technical Advisory Committee of the Council, the body responsible for the integration and operation of the scientific aspects of the program.

British Columbia Research Council.—The British Columbia Research Council, under the sponsorship of the B.C. Department of Trade and Industry, provides a scientific and engineering staff with laboratories at Vancouver to help British Columbia industries solve their technical problems. Its objective is to enable even the smallest firms to make use of modern technical knowledge and research to improve their competitive position in Canadian and world markets. The Council provides three classes of service: (1) a free information service in collaboration with the National Research Council; (2) assistance to specific firms at cost where information cannot be supplied from existing knowledge; and (3) at the Council's expense, research on problems of general value to the industrial development of the Province.

The Ontario Research Foundation.—The Ontario Research Foundation was established in 1928, and is financed by an endowment fund composed of subscriptions from manufacturers, corporations, private individuals, and a grant from the Provincial Government on a dollar-for-dollar basis with the other contributions. The Foundation carries on research to assist agriculture and industry in developing the natural resources of the Province. A study has been made of the physiography and climate of southern Ontario and also of the parasites found in wildlife in this Province. Many investigations have been undertaken in the industrial field and the Foundation is well equipped to work in metallurgy, textiles, chemistry and biochemistry. The services of the Foundation are at the disposal of industry on a fee basis, and consultative services, testing, short trial studies and long-term investigations have been undertaken for hundreds of firms. The work has resulted in better products and in more efficient processing. The Foundation administers a grant from the Provincial Government to support postgraduate scholarships and scientific research in the universities of Ontario.

The Hydro-Electric Power Commission of Ontario.—The Research Division of Ontario Hydro, with a present staff of 300, provides testing, investigation and research services for all phases of the utility's engineering design, construction work, and system operation and maintenance. The Division maintains a close liaison with other research organizations and power utilities, and staff members participate in the committee work of major technical societies and standardizing associations.

Electrical investigations pertain to methods of generating, transmitting, distributing and utilizing power, and to improvement in equipment for these purposes. Among the topics studied are problems of electrical insulation; system operation and control, and system protection against lightning; communications and telemetering; illumination; and power metering. Attention is given to the performance and efficiency of power equipment, to improved measuring techniques, and to means of minimizing the hazards of electric shock.

Among the structural and mechanical topics studied are the following: soil mechanics as related to foundations, roads, and earth dams and dykes; the physical properties of structural components and of numerous items such as conductor joints and line hardware; the mechanical performance and safety features of equipment and various types of machines; metals and metallurgy; welding materials, techniques and applications; atmospheric and underground corrosion of metals; stresses in materials and structures; noise and vibration conditions; and a variety of problems associated with the design, construction and maintenance of concrete structures, the application of masonry materials, and the production, placement and quality control of all concrete used.

In addition to chemical analyses and tests performed on a wide range of materials and products purchased, chemical research work is conducted with regard to such subjects as wood preservation, plastics applications, protective coatings, brush and weed control, lubrication, liquid electrical insulants, water treatment, thermal insulation, and corrosion prevention.

Other studies contributory and supplementary to the main branches of work are carried on in the fields of physics, biology, petrology and mathematics.

Subsection 3.—Medical Research

Medical Research Facilities.*—Support for medical research is provided by the Federal and Provincial Governments, by private foundations or corporations, by voluntary agencies which raise money by public subscription, and by universities and hospitals. From these sources there are available (a) research fellowships for training, (b) grants-in-aid for assistance in problems of a fundamental or clinical nature, (c) salaries for trained personnel, and (d) the necessary capital and running expenses for investigations which are of particular interest to government, hospital or pharmaceutical house.

The Department of National Health and the Department of National Defence maintain establishments in which research is done in well-equipped laboratories with highly trained personnel. The Department of Veterans Affairs encourages its staff to do research in its own hospitals; much of this concerns chronic illness, such as arthritis, atherosclerosis, metabolic and nutritional derangements.

Most of the fundamental medical problems are studied in medical schools through the system of grants-in-aid. Funds from the Federal Treasury are provided through the National Research Council, the Defence Research Board, and the Department of National Health. The National Research Council supports mainly research in the basic medical sciences—anatomy, physiology, biochemistry, pharmacology, bacteriology, pathology, and experimental surgery—but 20 p.c. of its grants are for clinical investigations. The Defence Research Board makes grants for studies in which it is particularly interested, such as shock, the preservation of blood and the use of blood substitutes, the effects of low temperatures and of radiation, etc. The Department of National Health and Welfare provides funds for research, available on the recommendation of provincial departments of health, in the following fields: public health research, tuberculosis control, child and maternal health, mental health, and general public health. It also gives assistance to the Canadian Arthritis and Rheumatism Society (which obtains other support by public subscription) and to the Ontario Heart Foundation (which derives its other resources from the Ontario Provincial Government). In addition the Department of National Health and Welfare makes available to the provinces cancer grants, out of which the provinces may supplement the funds for research which the National Cancer Institute receives from the Canadian Cancer Society. Thus the Department of National Health and Welfare is the Canadian agency which gives the greatest support to extramural research in medicine; its interest is primarily in those problems that have a direct bearing on the health of the nation rather than in fundamental research.

Universities receive funds for research also from provincial branches of the Canadian Cancer Society and from such government foundations as the Ontario Cancer Treatment and Research Foundation and the Alcoholism Research Foundation, from fraternal societies and clubs such as the Rotary Club, from the J. P. Bickell Foundation, the Atkinson Foundation, the Canadian Life Insurance Officers Association, the Muscular Dystrophy Associations of Canada, the Banting Research Foundation, the Multiple Sclerosis Society, pharmaceutical companies, etc.

With help from these diverse sources, active research programs are in progress in every one of the twelve Canadian medical schools. In certain of these there are special departments devoted to research, e.g., the Departments of Medical Research at the

* Prepared by Dr. G. H. Ettinger, Assistant Director, Division of Medical Research, National Research Council, Ottawa.

University of Toronto and at the University of Western Ontario, and the Department of Investigative Medicine at McGill University; these departments contain graduate students who work to higher degrees. With few exceptions, departments designed for undergraduate instruction are active in research; a majority provide graduate instruction as well, in which the students are maintained on research fellowships or grants.

Notable contributions to medical knowledge are made every year by Canadian scientists, but space permits the mention of only a few fields: studies on epilepsy at the Montreal Neurological Institute; functions and interrelations of areas in the brain and brain stem and studies in neurophysiology and neurochemistry at McGill University, the University of Ottawa and the University of Western Ontario; endocrine and metabolic studies at McGill University and the Universities of Montreal, Toronto, Western Ontario and Manitoba; anticoagulants at the University of Saskatchewan; atherosclerosis and hypertension at McGill and Queen's Universities and the Universities of Western Ontario and British Columbia; hypothermia at the University of Toronto; surgery of heart and blood-vessels at McGill University and the Universities of Toronto and Montreal, and the Montreal Institute of Cardiology; tuberculosis at Dalhousie University, the Institute of Microbiology, Montreal, and the Connaught Medical Research Laboratories, Toronto; mental health studies at the Department of Health, Nova Scotia, the Allan Memorial Institute at McGill University, the University of Toronto, Regina General Hospital and the University of British Columbia; virology, including poliomyelitis, at the Institute of Microbiology, Montreal, the Sick Children's Hospital, Toronto, and the Connaught Medical Research Laboratories; bacteriology, immunity and hypersensitivity at McGill University, the University of Montreal, Queen's University, the University of Western Ontario and the University of Toronto; cancer in all the medical schools.

Connaught Medical Research Laboratories.—The Connaught Medical Research Laboratories, University of Toronto, were established for the advancement of preventive medicine and public health through research and through the preparation of biological and other products essential in prevention or treatment of certain diseases. The Laboratories render a medical public service to all the provinces of Canada and, to an extent, to countries abroad. This service was initiated when the preparation of diphtheria antitoxin was undertaken in the Department of Hygiene at the University in an effort to reduce the toll of deaths from diphtheria in Canada. At the same time, the Department initiated investigations into this and other diseases. Since then, research activities have constantly expanded and today more than seventy studies are being conducted in the Laboratories.

The research program of the Laboratories concerns the broad field of preventive medicine. By including the study of certain animal diseases, particularly those which are transmissible to man, and through preparation of related products, the Laboratories are serving both the medical and veterinary professions.

The research projects are extensive and include studies of bacterial and virus diseases, investigations in immunology, epidemiology, physiology, biochemistry, and in other fields related to preventive medicine. These undertakings are maintained in part through the distribution of products, the furnishing of which constitutes an important public health service.

Important to the advancement of public health is the assistance rendered by the Laboratories in the postgraduate teaching of medical officers of health, nurses, dentists, veterinarians, and other professional personnel. From the inception of the Laboratories in 1914, members of the staff have been closely associated with postgraduate teaching in public health. In 1924, through the beneficence of the Rockefeller Foundation and with the co-operation of the Government of the Province of Ontario, the School of Hygiene was established. This provided greatly enlarged teaching facilities and also extended the participation of the Connaught Medical Research Laboratories in the work of training public health leaders.

On the University campus the College Division of the Connaught Medical Research Laboratories and the School of Hygiene share one building, permitting of joint use of research and laboratory facilities of the two institutions, and promoting a close

and mutually advantageous relationship. Here also the production of insulin and other glandular products is undertaken. On Spadina Crescent in Toronto, the Spadina Division of the Laboratories provides accommodation for much important work including the production of penicillin and research in the field of antibiotics. Additional facilities are provided near Toronto at the Dufferin Division and include a 145-acre farm property with modern laboratory buildings and quarters for animals.

Through the organization of the Western Division in the University of British Columbia, the Connaught Medical Research Laboratories have shared in the development of an important program of research in preventive medicine on the Pacific Coast.

Thus for over forty years the Connaught Medical Research Laboratories, with the co-operation of the medical profession and the official public health authorities, have contributed in steadily increasing measure to the advancement of research and public health in Canada.

The Banting Research Foundation.—The Banting Research Foundation supports the work of the Banting and Best Chair of Medical Research in the University of Toronto and aids medical research throughout Canada by making grants-in-aid to those who submit problems of sufficient medical interest to the Board of Trustees. The Board meets and makes grants usually three times a year, around June 1, Oct. 1 and Feb. 1. Five members of the Board of Trustees are appointed by the Board of Governors of the University of Toronto and the Alumni Association of the University of Toronto, and these five members appoint two other Trustees, then the seven members appoint an eighth Trustee.

Subsection 4.—University Research

Canadian universities and colleges would subscribe to three basically essential aims though with varying degrees of emphasis: (a) the diffusion of knowledge through sound teaching, extension and evening classes and written reports, (b) the conservation of knowledge and its reorganization and (c) the extension of the boundaries of knowledge through research. Most undergraduate courses attempt to provide a basic understanding in a number of subject fields with more extensive knowledge in one or more of these. The graduate courses provide a wider and deeper appreciation and understanding in a limited field through advanced courses, seminars and individual research. Practice in the research methods of the disciplines, using experiment, questionnaire, logic of the subject, or statistics is intended to prepare students capable of adding to present knowledge.

Research in the universities was first undertaken to obtain knowledge for its own sake, or pure research. It was soon recognized that this provided basic information on which applied science rests and it was followed through. More recently the universities, because of their unique position in having trained specialists and equipment, have undertaken emergency and other contractual research. The trend to pursue all three has been expanding rapidly and has created new problems as well as providing greater opportunities for undertaking sizable tasks which could not have been considered otherwise. Broadening of the field of research has indirectly been responsible for increasing the capacity of the universities to educate advanced students and has occasionally improved the quality of their education through providing large-scale equipment otherwise beyond the ability of the institution.

Research presently undertaken in the universities falls into three broad categories: projects undertaken by the student under the guidance of a professor or committee to meet requirements for an advanced degree; that undertaken by the professor, which may be of a more or less continuous nature; and larger research projects undertaken co-operatively on a faculty or interfaculty basis in the university laboratories or in such specialized institutions connected with the university as medical research laboratories, institutes of microbiology and hygiene, science service laboratories and agriculture colleges.

Some idea of the increase in research undertaken by Canadian universities is obtained from a comparison of the situation in 1919 (when two universities—Toronto and McGill—offered graduate courses beyond the master's degree and graduated 11 students) with the

situation in 1955. In 1955 Ontario had four, Quebec three and six other provinces each had one major university with graduate facilities and conferred 294 doctorates in course, distributed by fields as follows: biological sciences, including medical and agricultural sciences, 83; engineering and applied science, 6; humanities, 50; physical sciences, 115; social sciences, 38; and unclassified, 2. Subject matter covered in these and reports of other research conducted by university professors and reported in professional journals is encyclopaedic and reflects specialization and variety. Outstanding research in different fields has become associated with various universities, for example: nuclear research and geophysics in McGill, Queen's, McMaster and Saskatchewan; medical research in the Connaught Laboratories and in the Montreal Neurological Institute, to mention two; agricultural research in the western universities; and fisheries research in British Columbia.

Outside financial support for university research comes primarily from three sources: Departments of the Federal and Provincial Governments and including the National Research Council and Defence Research Board which provide grants for approved and contracted government sponsored research; industry which supports both basic and applied research; and private foundations which provide grants for approved research, sometimes in selected fields.

Expansion of facilities and the organization of personnel for research is not haphazard but the result of policy decisions. The present trend is towards the selection of department heads with consideration of expansion of research and the co-ordinating of research within broad fields.

Subsection 5.—Industrial Research

Industrial research in Canada is changing very rapidly. In the past, industry in general was largely unaware of the value of research to its own development and to that of the country, partly because many Canadian companies were subsidiaries of companies in the United Kingdom and the United States and partly because small companies found it impossible to finance their own research. The problem was accentuated by the vast size of the country, the absence of concentration of similar industries and the proximity to the relatively large research facilities of the United States.

However, the emergence of Canada as a highly industrialized society, its entrance into multitudinous fields of production, the rapid growth of many large nation-wide industries, the serving of a discriminating domestic market and the meeting of competition from abroad have had the effect of making Canadian manufacturing establishments research conscious and many of the larger ones now possess competent research organizations. The fields covered by some of these industries are outlined in the 1956 Year Book at pp. 386-389. The research work of the Canadian Pulp and Paper Association, an independent corporation combining efforts of government, university and industry in the expanding field of pulp and paper research, is described in the Forestry Chapter of this volume.

Industrial Research-Development Expenditures in Canada, 1955.—A survey was conducted in 1955 of some 2,500 of the larger industrial firms in an attempt to measure the extent of the research program being undertaken and to obtain an indication of its direction. From this survey information was secured on research costs incurred by Canadian companies—both direct expenditures, and cost of purchasing research-development results from affiliates or from other companies located in Canada and in foreign countries. Data were also secured on the principal fields in which the research was carried out and on the number of professionally trained research personnel employed. The magnitude of the research-development costs in 1955 and the increase planned for 1956 give an indication of the size of the program and the direction in which business is searching for new products, for new and more efficient processes and for improvements to existing products and techniques.

The research-development program was reported by industry as totalling almost \$66,000,000 in 1955 and was estimated at close to \$80,000,000 in 1956. By far the major part of the work in 1955 was conducted within the companies themselves and accounted for \$52,000,000. An additional \$12,000,000 was spent for research-development done outside Canada, the bulk of which was in the United States. The remaining \$2,000,000 was spent for research done by other companies in Canada.

1.—Research-Development Expenditures by Industry 1955 and 1956

Industry	Research Expenditures 1955	Estimated Research Expenditures 1956	Increase or Decrease
	\$	\$	p.c.
Mining, quarrying and oil wells.....	3,045,624	3,619,300	18.84

Other non-manufacturing ²	701,542	934,060	33.14
Totals.....	65,885,615	79,394,747	20.37

¹ Includes tobacco and tobacco products and miscellaneous manufacturing services, engineering and scientific services and trade associations.

² Includes construction, health

The following estimates of research-development in the various fields of activity in 1955 show that mechanical engineering, chemistry, chemical engineering, electrical engineering and metallurgy together accounted for 86 p.c. of the total. Expenditures in the chemistry and the chemical engineering fields, which are closely related, accounted for almost one-third of the total. Every industry reported some activity in the chemical research field and in at least one phase of engineering research.

2.—Research-Development Expenditures by Field of Research 1955

Field of Research	Amount	Field of Research	Amount
	\$		\$
Chemistry.....	13,370,558	Electrical engineering.....	13,777,617
Physics.....	3,066,917	Mechanical engineering.....	16,136,820
Geology.....	733,989	Other engineering.....	1,309,189
Medicine.....	1,454,999	Metallurgy.....	5,611,277
Agriculture.....	517,165	Other.....	1,294,263
Biology.....	471,144		
Chemical engineering.....	7,601,550		
Civil engineering.....	540,147		
		Total.....	65,885,615

Arrangement of industrial-research expenditures by size group based on annual sales of research-active firms shows that the larger firms accounted for the major part of the expenditures—firms with annual sales in excess of \$50,000,000—although this size group included only 14 p.c. of the firms maintaining research establishments.

3.—Research-Development Expenditures by Size Group 1955

Size Group ¹	Firms	Research-Development Cost	Percentage of Total
	No.	\$	
\$50,000,000 or over.....	52	42,723,889	64.85
\$10,000,000 to \$49,999,999.....	92	13,773,730	20.91
\$ 1,000,000 to \$ 9,999,999.....	199	8,572,856	13.01
Under \$1,000,000.....	34	815,140	1.23
Totals.....	377	65,885,615	100.00

¹ Based on annual sales value in 1955.

During 1955 the equivalent of 2,914 professionally trained scientists were employed on research-development projects. The three top industrial groups, in terms of numbers of professionally trained employees, were electrical apparatus and supplies, transportation equipment and chemical products, which together accounted for 58 p.c. of the total professional employment in the research field.

Classification of the professional scientists by field of research and degree of training reveals that in all phases of engineering research there is a greater predominance of professional employees with bachelor degrees. On the other hand, chemists, physicists, geologists and other earth scientists and biological scientists, although predominantly trained to the bachelor level, have a greater percentage of professional employees with master or doctorate degrees than in the engineering field or in the over-all pattern.

4.—Professional Research-Development Scientists Employed, by Field and Level of Training 1955

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Agriculture is one of Canada's leading primary industries and is of particular importance to the economy of the country. Special articles that have appeared in previous Year Books dealing with the historical development of agriculture and with significant features of that progress are listed in Chapter XXIX under the heading "Special Material Published in Former Editions of the Year Book". The following article covers, briefly, trends in the postwar period.

POSTWAR AGRICULTURE*

The trends in postwar agriculture have been quite well marked. A larger over-all output of agricultural products has been accomplished with a reduced labour force. Canada's population has increased to more than 16,500,000, about 34 p.c. since 1946, and industry generally has been able to absorb quite readily the annual increment of new workers entering the labour force from natural increase in the adult population and from immigration. This buoyant activity, together with little unemployment, has resulted in steady and advancing incomes and therefore in active demand for almost all classes of commodities including foods. Thus the domestic market has utilized a much larger proportion of the increased output of agricultural products, bringing about a change in the prewar pattern of Canada's agricultural export trade.

Agricultural Production.—As already stated, the volume of agricultural production increased considerably over the postwar period. The index of physical volume, calculated on the basis of 1935-39 equalling 100, stood at 165.3 for 1956 as compared with 125.6 for 1946. Fluctuations registered in the interval were attributable in large measure to the size of the western grain crop. But even allowing for the years of bumper grain production, there was a consistent increase in the output of almost all agricultural products.

* Prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, Ottawa.

Hog slaughterings, which reached a peak during the period of the wartime bacon contracts with the United Kingdom, varied through the years since then, but remain at more than 1,000,000 above the 1935-39 average of 3,400,000. In three of the postwar years they exceeded that average by 2,000,000. Slaughterings of cattle and calves showed a similar upward trend, increasing almost consistently through the years and in 1956 exceeding the 1935-39 average of 1,500,000 by just over 1,000,000. Total milk production varied in the postwar years between 15,300,000,000 lb. and 17,600,000,000 lb. annually.

Since the end of the War the number of farm workers has declined by an average of 30,000 annually and it is estimated that only about 15 p.c. of the gainfully employed in Canada are now on farms. Ability to reach the high level of production with a much reduced labour force resulted largely from the great increase in mechanical farm operations. About \$2,000,000,000, or one-fifth of farm capital, is now invested in machinery and equipment. This includes one tractor for every 242 acres of improved farm land. Electricity is available on 75 p.c. of Canada's farms and provides power for many kinds of labour-saving devices. Some indication of the growth in mechanization is shown by figures secured from eight of the Department of Agriculture's Illustration Station Farms in southeastern Saskatchewan; in 1940, 17 p.c. of total farm capital in that area was in machinery and by 1956 the proportion was 41 p.c.

Also of great importance in the advance of agricultural output has been the constant introduction of improved methods of farming based on the work of agricultural scientists. Long-term research of the plant breeders, for instance, has produced disease-resistant and newer crop varieties which have increased production materially through higher yields. Today special varieties of almost all agricultural crops have been developed to give best results under the varying climatic and soil conditions existing throughout Canada. Chemical destruction of weeds, almost in its infancy during the War years, today is common practice and vast areas of crops are treated with a variety of chemical preparations that effectively destroy or control weeds. The development of new and better insecticides and fungicides has kept pace with the chemical treatment of weeds and with a corresponding effect. Irrigation and more efficient production and harvesting methods have also played a part.

At the same time, in considering crop yields, nature must not be overlooked. Canada has recently had a cycle of excellent growing years; should this be replaced by a less favourable growing cycle, yields might well decline and over-all crop production be reduced.

The livestock industry has also undergone considerable change. Plans for the eradication of tuberculosis and brucellosis among cattle have received greater impetus. Record of performance testing and artificial insemination of cattle is contributing to better strains of livestock and poultry. Dairy research is having its effect, and studies relating to poultry and of new methods of preparing and packaging poultry products for market have given this industry something of a new look.

In these and many other ways research is contributing toward the increase in production. Research work on test plots and in laboratories is being applied in the everyday operations of Canadian farms and agriculture is becoming more and more a scientific operation.

The Domestic Market.—Canadians spend about one-quarter of their income on food. At present they consume in one form or another about 99 p.c. of all milk produced in the country, exports of pork products have become quite small in relation to domestic consumption, and in 1955 and 1956 Canada became a net importer of beef and poultry. It therefore seems clear that, particularly since 1950, consumption of all these products has shown a considerably sharper rise than the increase in population. In other words there has been a 'real' increase in per capita consumption.

A striking feature of postwar food consumption has been the increased use of high protein foods such as meat, poultry and eggs, and of the protective foods such as milk and processed dairy products. There has also been greater consumption of fruits and

vegetables, both fresh and canned, but consumption of cereals and potatoes has declined. Thus Canadians appear to be enjoying a much better balanced diet and the Canadian housewife is spending more of her food budget on higher priced foods.

Increased per capita consumption of some products has also been accompanied by changes in consumer preference bringing adjustments in production, processing and marketing methods. In 1956, Canadians consumed 73.6 lb. of beef per capita which is approximately 29.5 lb. more than the amount consumed in 1952 and the highest consumption in 30 years. Also, beef consumed in recent years has been of higher quality. In 1938 the percentage of Red and Blue brand beef was about 21 p.c. of the total kill; in 1956 it was nearly 50 p.c. The increased demand has created a year-round market for these grades and this change in market requirements has resulted in a more efficient use of pasture because, with an assured outlet throughout the pasture season, there is not the necessity, as there was at one time, of trying to reach the early market before the seasonal break in prices.

In 1956 the per capita consumption of poultry was 31.6 lb., an increase of about 10 lb. since 1950. Until fairly recently, poultry production was something of a farm sideline but now it is rapidly becoming a highly specialized farm enterprise. Efficient laying flocks are replacing the old casual layer and the establishment of ultra-modern broiler plants is indicative of the transition in the production of poultry meat. Recent acceptance of turkeys as something more than a Thanksgiving and Christmas feast has been achieved by the introduction of small light-weight birds and by changes in merchandising and processing methods geared to accommodate large-scale production and distribution. Today the public is getting a higher quality product, packaged in more convenient and attractive form and available throughout the year.

Annual consumption of pork products has varied more than other meats during the postwar period. This is because, as farmers assess the potential market demand, they can cut-back or increase the supply of hogs much more rapidly than can be done with beef cattle. Today Canadians are eating about 58 lb. per capita annually compared with a prewar consumption of 39.8 lb. Few adjustments have been necessary to meet the demands of the domestic market. The Canadian hog industry was originally developed to meet the requirements of the United Kingdom market. Fortunately Canadian taste in bacon and hams is almost identical with that of the British consumer and so, as exports to the United Kingdom declined, the domestic market proved a suitable replacement. Recent consumer preference surveys indicate that the Canadian housewife is prepared to pay a premium for lean bacon.

Because of the number of products into which fluid milk can be processed and the speed with which a transition can be made from one to another, trends in the dairy industry are relatively flexible. For some years now the domestic market has been absorbing almost all the output of Canadian farms either as fluid milk and cream or as a processed product. Annual milk production has been around 17,300,000,000 lb. for the past three years. Per capita consumption of fluid milk and cream has been very stable for four years and that of creamery butter has shown little change in the same period. Consumption of cheddar cheese declined somewhat in 1956 but still remains about in line with recent years. Ice cream continues to be an important dairy product and the average consumption is about 16.5 pt. annually.

For a number of years domestic consumption of concentrated milks has been increasing. Dry skimmed milk has become popular in baby-feeding and for partially fat-free diets and consumption has almost doubled since 1945. If the recent trend in domestic sales and exports of evaporated milk is to be maintained the volume of production must be increased. But because fewer heifers are currently being kept for replacement of older cows in the herd, any increase in milk production in the immediate future will depend mainly on an increased production per cow.

The Export Market.—Naturally the expanding demand from the domestic market for Canada's farm production has had a marked effect on the pattern of export trade. In the years 1935-39 Canada exported on the average 33 p.c. of the total agricultural production. The proportion has fluctuated considerably since then, reaching 69 p.c. in 1945, the peak year of the wartime food production drive, and dropping to 24 p.c. in 1953. In 1955, the latest year for which figures are available, it was 28 p.c. Imports of directly competing agricultural products have not varied much from year to year. They averaged 5 p.c. of Canadian farm production for the years 1935-39 and were 4 p.c. in 1955.

There has been a considerable change since before the War in the dependence on the export market by individual commodities. Wheat exports have averaged about 60 p.c. of production but exports of some other grains have increased greatly in terms of production. For instance, barley exports in 1935-39 were 17 p.c. of production and for the 1955 crop they were 27 p.c. The change is even more striking for rye, being from 26 p.c. in 1935-39 to 88 p.c. in 1955, and for flaxseed from 3 p.c. to 59 p.c. Despite the great increase in production there has been a marked decline in the relative dependence on the export market for livestock. The percentages of cattle marketings exported, both live and as meat, were 14 p.c. in 1935-39, and 3 p.c. in 1955. Equivalent figures for hogs show a similar movement, from 24 p.c. prewar to 6 p.c. in 1955. Exports of cheese and apples have also declined relative to production. Cheddar cheese exports were 65 p.c. of production in 1935-39 and 17 p.c. in 1955 and apple exports 52 p.c. in 1935-39 and 15 p.c. in 1955.

Canada's agricultural exports have also shown a decided change in direction during recent years. In the immediate prewar years, 62 p.c. of such exports, other than wheat, found a market in the United Kingdom and 27 p.c. in the United States. During the War, the United Kingdom took all available supplies of many agricultural products. After the War, balance of payments difficulties led to the curtailment of imports of many agricultural products from dollar countries, but the United States showed an ability to absorb greater quantities of Canadian farm products. In the three years 1953 to 1955, 21 p.c. of farm exports, other than wheat, went to the United Kingdom and 53 p.c. to the United States.

The position with respect to imports in the United Kingdom is that under a program of government assistance to agriculture through guaranteed prices and subsidies, domestic production has been stimulated and the dependence on imports reduced. In 1955 the United Kingdom produced 46 p.c. of its requirements of bacon and ham compared with 36 p.c. in 1938. The change in some other commodities was even more marked. Pork advanced from 74 p.c. in 1938 to 91 p.c. in 1955; eggs from 66 p.c. to 91 p.c.; beef from 47 p.c. to 63 p.c. and apples from 23 p.c. to 73 p.c.

The Future Domestic Market.—Whether the active trend of the past decade toward increased domestic consumption of agricultural products will continue appears to be tied in closely with the industrial economy of the country as a whole. With vast new resources being developed, and others still untapped, there seems every reason to conclude that population will increase even faster than in the past, that the domestic market will remain buoyant, and that new industrial areas will be established.

Thus Canadian agriculture faces the problem of meeting the needs of a much expanded domestic market. Canada has many thousands of acres of land in settled areas capable of much more intensive cultivation than at present. These areas are already supplied with electricity and transportation facilities and are within reach of schools, churches and other amenities of life. Scientific agriculture will continue to assist in increasing the potential output of Canadian farms. As already mentioned, harder and higher-yielding varieties of almost all crops are constantly being developed; crop losses by insects, weeds and disease are being reduced; soil chemistry is making and keeping soils more fertile; irrigation and reclamation of suitable lands is progressing; improvement of livestock is under continual study as is processing, transportation and marketing of the finished product.

Because of Canada's rapid economic growth there has been some encroachment on farm land by industry. Naturally this is most pronounced in areas geographically suited for industrial development, and in such areas some fertile land has been lost to agriculture. However, it seems probable that for some years to come, more intensive cultivation of the present farming areas will compensate for loss of any agricultural land to industry. A possible exception may be in certain areas of southern Ontario where highly specialized crops are now grown and where climatic conditions are the essential factor in their production.

The dearth of farm labour may be a limiting factor to production in those branches of the industry, such as dairying, which cannot obtain much advantage from mechanization. However, during the latter part of 1956 and early 1957 there were indications that the shift of workers from farm to town had slowed down, apparently as the result of a more adequate supply of labour in competing industries, particularly forestry and construction. If the total available labour force tends to level out more evenly among all industries in the years ahead, farmers will find hired help less difficult to obtain.

Section 1.—Federal Government in Relation to Agriculture*

The British North America Act (1867) states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada". As a result of this provision there now exists a Department of Agriculture, with a Minister of Agriculture at its head, in the Federal Government and in each of the provinces except Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines and Resources.

Subsection 1.—General Policy, Price Stability and Farm Credit

The activities of the Department of Agriculture are directed toward the production of marketable farm products. Apart from the initial research and experimentation in connection with operations on the farm itself it is essential that processing, grading and inspection of farm products should be of a high standard if markets both at home and abroad are to be retained and new ones developed. For that reason the inspection and grading activities of the Department have become of increasing importance. By inspection and grading the buyer is able to obtain a product suited to his requirements; the producer is compensated according to the grade of his product and is thus encouraged to produce a high quality commodity.

The results of experimental and research work and the policies of the Department in general are made available to farmers and to the public through bulletins, the press, radio, television and the screen. Regular releases on market conditions and prices are a feature of this publicity.

Price Stability.—The Federal Government has passed a number of Acts designed to give price stability in marketing agricultural products. The most important of these is the Agricultural Prices Support Act, 1944, which permits the Federal Government to stabilize the price of any agricultural product except wheat and coarse grains (which are marketed under other legislation) by outright purchase or by underwriting the market through guarantees or deficiency payments. The following products have been supported under the Act when occasion arose: potatoes, apples, dried white beans, extracted honey, dry skimmed milk, creamery butter, shell eggs, cheese, hogs and cattle.

* Except as otherwise indicated this material was prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, Ottawa.

Under the Agricultural Products Co-operative Marketing Act, 1939, price support may be extended by the Government to assist in financing initial payments made by co-operatives to primary producers on delivery of the products for sale. Initial payments are subject to negotiation between co-operative and government but may not exceed 80 p.c. of the average returns for like grades and qualities during the previous three years and the Government guarantees banks against loss in advancing funds to co-operative organizations with whom agreements have been signed. The legislation has been used extensively by co-operatives, and agreements through the years have covered onions, potatoes, corn, many seed crops and ranch bred fox and mink pelts.

A number of provincial governments have legislation providing for the establishment of a Board to regulate or control the marketing of agricultural products sold within the province concerned. Under the British North America Act a provincial government cannot legislate with regard to products marketed outside the province or in export trade, but under the Agricultural Products Marketing Act, 1949, the Federal Government may at discretion permit provincial marketing legislation to be applied in whole or in part to the marketing of agricultural products outside the province concerned and in export trade.

The Agricultural Products Board Act, 1951, states that the Board may buy, sell, export and import agricultural products when directed by the Governor in Council.

Farm Credit and Assistance.—The Federal Government has made provision for the extension of credit to farmers under the Canadian Farm Loan Act and under the Farm Improvement Loans Act. In addition to these two Acts, dealt with in detail below, The Prairie Grain Producers Interim Financing Act, 1956, provides short-term financing necessary by reason of difficulty in the prompt marketing of threshed grain. Certain financial assistance in event of crop failure is provided by the Prairie Farm Assistance Act.

The Canadian Farm Loan Act.—Under this Act, long-term farm mortgage credit is available to Canadian farmers through the agency of the Canadian Farm Loan Board established in 1929. Loans are made to buy farm land, livestock and farm equipment, to make farm improvements and to pay debts and operating expenses.

Prior to June 26, 1956, the Board supplied intermediate-term second mortgage credit to its first mortgage borrowers but on that date the Act was amended and this type of credit was discontinued and the Board's first mortgage lending powers were broadened. First mortgage loans repayable on an amortization plan with equal annual payments are now made for periods not exceeding 30 years and in amounts up to \$15,000 and up to 65 p.c. of the appraised value of the farm offered as security. Funds for lending are borrowed by the Board from the Minister of Finance at current interest rates and are re-lent to farmers at a slightly higher interest rate sufficient to pay the cost of funds and administration expenses. The Board's authorized capital, fixed at \$3,000,000 by the amendment of June 26, 1956, was increased to \$4,000,000 by a further amendment passed on Mar. 28, 1957. The Board's borrowing power is limited to twenty times the amount of its outstanding capital subscribed by the Government of Canada.

In the year ended Mar. 31, 1957, loans were approved for a total of \$13,978,700, an increase of 68 p.c. over the previous year and the largest amount approved in any year since the Board's establishment. Of this total 58.5 p.c. was approved to buy land and pay land-secured debt, 21.6 p.c. to pay debts, 14.3 p.c. to buy livestock and farm machinery and to make improvements and 5.6 p.c. for sundry purposes. At Mar. 31, 1957, 20,372 first mortgage loans and 1,841 second mortgage loans were outstanding for a total of \$53,748,364.

The Farm Improvement Loans Act.—The Farm Improvement Loans Act, administered by the Department of Finance, is designed to provide intermediate-term credit and a type of short-term credit to enable farmers to equip, improve and develop their farms. There is scarcely anything a farmer needs in the way of mechanical aids for his farm operation or his home for which a loan may not be made. Assistance may also be obtained

for the purchase of livestock, principally foundation or breeding stock; for installation or repair of farm electrical systems; for repair, alteration or construction of farm buildings, including the home; and for fencing, drainage and other development projects. Credit is provided on security and terms suited to the individual borrower.

The chartered banks are the lending agency under the Act. The legislation, originally operative for three years 1945-47, has been extended from time to time for three-year periods. The Federal Government guarantees each bank against loss up to 10 p.c. of the total loans made by it during the period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. In 1956 the Act was extended for a further three-year period commencing Apr. 1, 1956, and ending on Mar. 31, 1959. The aggregate of loans for this period, affected by the guarantee, is set at \$300,000,000. By Dec. 31, 1956, only 727 claims amounting to \$425,402 had been paid under the guarantee since inception of the Act.

Loans may be obtained for terms up to ten years with interest not to exceed 5 p.c. The maximum amount to be advanced to a borrower at any one time was increased to \$5,000 by the legislation of 1956. The borrower must provide from 10 p.c. to 40 p.c. of the cost of his project or purchase, depending on the loan category to which it belongs.

By Dec. 31, 1956, \$523,852,496 or 80.2 p.c. had been repaid of the total loans made. The position as of Dec. 31, 1956, was as follows:—

<i>Period</i>	<i>Loans Outstanding</i>	<i>P.C. of Total Loans Outstanding</i>

Prairie Farm Assistance Act.—The Prairie Farm Assistance Act, passed in 1939 and administered by the Federal Department of Agriculture, provides for direct money payments by the Federal Government, on an acreage basis, to farmers in areas of low crop yields in the Prairie Provinces and the Peace River District of British Columbia. The Act was designed to assist the municipalities and provinces in years of crop failure to meet relief expenditures which would normally be too great to be assumed by them. The Act provides that payments be made to farmers under certain conditions and terms and, in order that Federal Government costs may be defrayed to some extent, it is required that 1 p.c. of the purchase price of all grains (wheat, oats, barley and rye) marketed in the Prairie Provinces be paid to the Federal Government and set aside in a special fund for the purposes of the Act.

If the farmer, who may be an owner, a tenant, or a member of a co-operative farm association engaged in farming, is located in a crop failure area, he may be awarded assistance on not more than one-half of the cultivated land or a maximum of 200 acres. The rates of payment range up to \$4 per acre.

From the inception of the scheme to Mar. 31, 1957, the total amount paid out under the Act was \$186,286,055. The amount collected under the 1-p.c. levy to Feb. 28, 1957, was \$97,740,303.

Subsection 2.—Agricultural Research and Experimentation

The Department of Agriculture conducts on a broad scale scientific research and experimentation on the control of pests and diseases, the nutritional requirements of plants and animals, the breeding and testing of new species and varieties, the microbiology of soils and foods, investigations of crop production and cultural methods, and many other matters. This work is carried on mainly by the Science Service and the Experimental Farms Service and, in addition to providing information on current production problems, is of paramount importance to the long-time well-being of agriculture.

Conservation of the soil is of basic importance to agriculture and research in the form of soil surveys and study of methods for the protection and conservation of soil resources is carried on by the Department in collaboration with the provincial governments. Studies include the chemistry of the soil, cover crops, value of manure and fertilizers, cultural methods, use of tillage machinery and development of large land reclamation projects.

For many years the Department has conducted investigations into the control of insects and diseases of forest trees. The limited silvicultural work carried on has aimed at maintaining a supply of trees suitable for planting on the prairies as shelter belts and to prevent soil and snow drifting. Basically this is also a soil conservation measure.

Much of the research and experimental work is concerned with crop plants, for after the soil itself, these are of chief importance. This work includes the breeding and testing of suitable varieties of crops to be grown under the varying climatic conditions throughout Canada. The culture and the nutritional value of crop plants and the suitability of food crops for human consumption—even their appeal or lack of appeal to a housewife—are continuously under study.

Livestock research includes mainly the feeding, care and handling of stock, its protection from insects and diseases and the production of suitable market and breeding types. A limited amount of work has also been done on the production of new strains of animals. Research and study of processed products such as milk, butter, cheese and meat and of fruits and vegetables is a most active item in the scientific work of the Department. Storage of agricultural products creates many problems that call for constant study.

Chemical and biological research and experimentation is chiefly of an applied nature. The Department does not specialize in so-called fundamental research involving the discovery of basic scientific phenomena and laws but concentrates on the adoption of known processes and the application of such processes to specific aims. Some discoveries bordering on fundamental research however are occasionally made, and extension of research is also made to some degree into the basic field where certain information is lacking in applied science.

Agricultural research, particularly in plant science, must be decentralized to a great extent as most problems must be studied where they occur. Apart from the value to farmers of having a local source of information the experimental farms and science laboratories are widely distributed because the work can be done in no other way. In addition to the headquarters of the Experimental Farms Service at Ottawa work is carried on at 32 branch experimental farms, 20 substations and two forest nursery stations. Experimental work of local application is done at 233 illustration stations. The work of the Science Service, centralized at Ottawa, is augmented by that of about 100 laboratories located throughout the country.

In the field of economic research, studies in farm management, land utilization, marketing and farm family living are undertaken in all parts of the country. The scope of the scientific and experimental work of the Department is revealed when it is realized that there is no plant or animal in Canada that is not susceptible to damage caused by bacteria, fungi, viruses, insects or parasites.

Subsection 3.—Protection and Grading

Unlike manufactured articles, even close scrutiny of most agricultural products is of little help in determining their purity as food, or their value to the farmer for further production. Products used as food must be pure and healthful and must satisfy standards of quality established for them. If agriculture is to be conducted on a sound basis, the supplies farmers buy—seeds, feeds, fertilizers and pesticides—also must carry a guarantee that they will be as represented. Much of the research and experimental work would be of no avail if legislation were not provided to ensure satisfactory end-products. In addition, Canada's livestock, crops and trees must be protected from diseases of foreign or domestic origin.

These protective and grading services are a most important part of the work of two sections of the Department of Agriculture: the Production Service and the Marketing Service. Generally the protective features and the grading to standards or approval of analyses of farm supplies come under the Production Service. The grading of most food products is the responsibility of the Marketing Service. Legislative authority to impose protective and grading services is derived from about 20 Acts or their accompanying Regulations.

Health of Animals.—The protection of the health of Canada's livestock is a most important service. To guard against the introduction of contagious diseases from foreign lands stringent regulations are enforced by the Health of Animals Division covering the importation of livestock, livestock products and even packing material and litter. Provision is also made for the control or eradication of animal diseases developing within Canada. The Division is responsible for the inspection of animals slaughtered for food and post-mortem examination is made of all carcasses in the course of slaughter and dressing before the meat is approved for human consumption. Sanitary conditions in packing plants and slaughter houses come under review and all canned meats must meet high standards of processing to qualify as food. The Division operates animal pathology laboratories which carry out routine laboratory examinations and conduct research investigations in animal disease problems.

Protection of Supplies.—The Plant Products Division, in co-operation with the provinces and other agencies, is concerned primarily with the administration of Acts respecting feeding stuffs, fertilizers, pesticides, hay and straw, fibre flax and binder twine, and the production of seed. The inspection services of the Division have three main functions: (1) to enforce the Acts that regulate the sale of the agricultural supplies; (2) to provide as required such services as seed crop inspection and the sealing of seed produced from inspected and other approved crops; (3) to co-operate with provincial governments and other agencies in promoting and improving supplies of seeds, feeds, fertilizers and pesticides.

Visual inspection is of little value for most of these products and laboratory testing is necessary; the laboratory services of the Division maintain branch offices across Canada. Testing seeds is a complex matter, for they must be tested for germination, variety, purity and freedom from weeds and other kinds of seeds before they are graded. All feeding stuffs, fertilizers and pesticides are subject to registration and this is refused if the use of products would be dangerous, if the ingredients or analyses are unsatisfactory or if the claims made regarding their value are incorrect or misleading.

Plant Protection.—The Division of Plant Protection functions with regard to plants and plant products much as the Health of Animals Division does with animals, and it administers the Destructive Insect and Pest Act. Imported nursery stock and plant material are all subject to inspection as protection against the introduction of insects and diseases. Extensive inspection is maintained within Canada to identify, localize and exterminate dangerous enemies of crops and trees. Provision is also made for the inspection of potato crops to be used for seed for domestic and export markets, and for the issuance of health certificates required for a wide range of plant products.

Standards and Inspection.—The Department has been steadily establishing and improving standards of quality for agricultural products for over fifty years. This work originated in an effort to improve the quality of export commodities and has gradually been extended to include many products that move in interprovincial trade. Most provinces have adopted these standards for enforcement on products marketed within their boundaries.

Grade standards are established and enforced for dairy products, meats, wool, eggs, poultry, fresh and processed fruits and vegetables, honey and maple products. These grades are widely recognized outside Canada and many Canadian foods and agricultural products command premium prices because of the strict quality standards maintained.

Dairy Products.—Producers, processors and consumers all derive benefits from grading and inspection services of the Dairy Products Division. Authority to carry out such services is contained in the Canada Dairy Products Act which establishes national standards for dairy products and regulates interprovincial and international trade. Grade names and standards are prescribed for cheddar cheese, creamery butter and dry skimmed milk and each of these products must be graded before entering into interprovincial or international trade. Dairy products for which grade names are not established, such as ice cream, evaporated milk and process cheese, are required to meet prescribed standards for composition, packing and marking before being exported from Canada, imported into Canada or moved from one province to another. Authority to carry on the grading and inspection of dairy products made and sold within the province of origin is derived from legislation passed by the province concerned.

Meats and Wool.—In addition to veterinary inspection of carcasses for wholesomeness, inspection and grading of meats for quality is of importance. All hogs slaughtered at inspected and approved plants are rail graded, that is, the farmer is paid on the dressed weight and quality of the carcass. All beef carcasses in inspected plants are graded and the better grades are marked with the national brands according to prescribed standards. Lamb and veal carcasses are graded on an optional basis. Wool is inspected and graded in registered wool warehouses.

Eggs and Poultry.—There are 1,243 registered egg grading stations for the grading and packing of eggs; and 43 registered egg breaking stations for the processing, grading and packing of frozen egg products. Registered poultry processing and eviscerating stations for the processing, eviscerating, grading and packing of poultry total 381. Because of a rapidly increasing demand for eviscerated poultry the quantity processed in registered processing and eviscerating plants has increased—from approximately 4,000,000 lb. in 1950 to 134,789,695 lb. in 1956.

Inspection of eggs, poultry and frozen egg products is compulsory on all sizable quantities intended for export, and also for interprovincial poultry shipments of 10,000 lb. or over. These products are also checked periodically for grade when offered for wholesale and retail sale. The sale of eggs by grade at retail is compulsory throughout Canada and the sale of poultry by grade at retail is compulsory in many of the larger consuming centres.

Fresh Fruits and Vegetables.—Grades are established for all principal fruits and vegetables produced in Canada. Practically all products for which grades are established must be inspected and certified if for shipment out of Canada. In addition, inspection and certification is compulsory on specified products if produced in certain provinces and shipped to another province. To provide this service, mostly seasonal in nature, a staff of inspectors is maintained throughout the foremost producing areas across Canada. In the larger distributing centres an inspection staff is maintained to administer grading, packaging and marking regulations at the wholesale and retail level, to collect and compile market statistics and to provide on request a commercial inspection service covering the quality or condition of produce received by the wholesaler. The shippers, brokers, commission houses and wholesalers dealing in fruits and vegetables in interprovincial, export or import trade must be licensed and are subject to established regulations.

Processed Fruits and Vegetables.—When special regulations covering canned fruits and vegetables were established under the Meat and Canned Foods Act in 1907, Canada became the first country to have any such legislation. Regulations under the Meat and Canned Foods Act now establish grades for practically all canned, frozen or dehydrated fruits and vegetables as well as for jams. Sanitary regulations are also established and are enforced by a staff of inspectors who provide an inspection service covering interprovincial, export or import movement of processed fruits and vegetables. This movement constitutes about 98 p.c. of the entire industry in Canada, the sales value of which amounted to approximately \$234,000,000 in 1955 as compared with \$20,000,000 in 1919. Although no grades are established in the regulations, the processing and packing of such products as pickles, olives, vegetable soups, etc., is also supervised and controlled. About 520 processing plants of one kind or another operate under a Certificate of Registration issued by the Department of Agriculture.

Honey.—Regulations are established for the classifying, grading and marking of all honey moving in interprovincial or export trade. Inspection is compulsory for honey being shipped out of Canada and administrative inspections for class and grade are made at the wholesale and retail levels on the domestic market. Interprovincial and export shippers and packers of pasteurized honey must be registered with the Department of Agriculture.

Maple Products.—Regulations are established for the prohibition of adulteration of maple products, for inspection and analysis, for proper identification of maple products and of 'colourable imitations' and for the licensing of manufacturers or packers and of all sugar bush operators operating in the interprovincial or export market. To enforce the regulations periodic inspection is made of the manufacturing plants, markets, stores and restaurants.

Subsection 4.—Canada's Relationship with FAO

According to the constitution of the Food and Agricultural Organization, the nations joining the Organization agree to promote the common welfare and contribute toward an expanding world economy by furthering separate and collective action for the purposes of raising levels of nutrition and standards of living of the people under their respective jurisdictions, securing improvements in the efficiency of the production and distribution of all food and agricultural products, and bettering the conditions of rural populations.

The FAO at its founding conference at Quebec City in 1945 started with 34 members; in 1957 there were 74 members. As new nations are born they may join the FAO. For example, Tunisia was admitted at the 1955 Conference and Morocco and Sudan joined at a special session of the 1956 Conference. The first Director-General of the FAO was Lord John Boyd Orr of the United Kingdom and the fourth and present incumbent is B. R. Sen of India who was elected in 1956.

The budget voted in 1945 for the first nine months of the new Organization's working year was \$2,000,000 and the 1957 budget was \$6,800,000. In addition to the latter amount, technical assistance funds (ETAP) totalled approximately \$9,144,000. Currently the staff of the Organization numbers about 1,600 persons, 600 of whom are working in over 40 country missions mostly as technicians.

FAO activities cover a wide field including agriculture, fisheries, forestry, nutrition, home economics, agricultural statistics, marketing and economics. A number of regional bodies have been created to facilitate work in special fields. About 85 p.c. of FAO activities represent direct assistance to individual governments, the remainder being composed of regional projects and services. The FAO arranges specialized training abroad for professional, technical and administrative officials from under-developed countries, and assists governments to organize in-service training institutes within their own countries. Since 1951, FAO has trained over 1,000 Fellows abroad and another 3,000 professional workers in regional and national training centres.

Commodity Review.—Progress in production of food and agriculture has been made since World War II, although it may not have been as great as desired nor equal among all countries. Production during 1956 rose sharply in North America and Oceania, the regions already most troubled by surpluses, but otherwise, apart from a substantial gain in the Far East, production showed little change and in some cases declined.

The disposal of agricultural surpluses remains one of the most pressing commodity problems facing the FAO and the scale of special disposal programs has been stepped up. The agency within the FAO directly responsible for a review of the commodity situation is the Committee on Commodity Problems (CCP) which carries out FAO responsibilities of analysis and interpretation of the international commodity situation and advises on suitable action when appropriate.

Over the past two years the Committee has more intensively applied the policy of setting up commodity study groups such as those on wheat and other grains, cocoa, coffee, dairy products, coconut, olive oil, and hard fibres. The CCP also convened an expert working group on agricultural support measures. Canada has been represented on the working parties dealing with grains, dairy products and price supports, and has been following closely the developments in the other commodity working groups.

In addition, the Consultative Sub-Committee on Surplus Disposal, located at Washington, U.S.A., is holding a watching brief in connection with programs having to do with the disposal internationally of surplus agricultural commodities. The Sub-Committee provides a forum for discussing complaints and problems. Principles governing the disposal of surpluses are: to increase consumption rather than to restrict supplies; to dispose of excess stocks in an orderly manner so as to avoid any undue pressure resulting in sharp falls of prices on world markets, particularly when prices of agricultural products are generally low; where surpluses are disposed of under special terms, to undertake that such arrangements be made without harmful interference with normal patterns of production and international trade.

Another consultative sub-committee deals with the economic aspects of rice, paying particular attention to trade matters and to any special difficulties which exist or are likely to arise in the international trade in rice.

The CCP and its Washington Sub-Committee have had under consideration such matters as the establishment of national food reserves and the use of surpluses for economic development. Progress has been slow but a number of nations did get together and

devise a plan of utilizing surplus dried milk. A scheme is under development in Calcutta, India, with the financial backing of several countries. Canada has indicated its willingness to participate in this scheme and has also agreed to take part in the survey of dairy needs in the city of Karachi.

Canada and the FAO.—Canada is one of the founding members of the FAO and is a member of the Council, the Committee on Commodity Problems and the Consultative Sub-Committee on Surplus Disposal. Canada has also participated in a number of working parties sponsored by FAO dealing with a variety of problems and is represented on the Co-ordinating Committee.

More than 50 Canadians have been on technical assignments since 1951. For some of these experts there were repeat assignments. Others have been invited to participate on panels of experts dealing with nutrition, plant protection, forestry and fisheries. A number of Canadians are on the staff at Headquarters.

Canada's financial contributions are at present the fifth largest, representing 4.6 p.c. of the present FAO budget; the first four in order of size of contributions are the United States, the United Kingdom, France and West Germany. Canada's financial contribution to FAO Headquarters' budget since the beginning has ranged from \$190,000 to \$338,000 annually. In addition, Canada contributes to FAO's technical assistance work through its annual payment to the UN Technical Assistance Fund. In 1957 this contribution totalled \$1,800,000.

Section 2.—Provincial Governments in Relation to Agriculture*

Subsection 1.—Agricultural Services

Newfoundland.—Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines and Resources. The Division is in charge of a Director who is assisted by a staff of 21 officers. For purposes of administration, the Province is divided into nine districts. A fieldman with permanent headquarters is located in each district except Labrador, where the officer is resident for the summer only. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry include: assistance in the clearing of land with government-owned and -operated tractors; a bonus of \$125 an acre on land cleared by privately owned equipment; the distribution of ground limestone at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance to agricultural societies, marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them. Small fruit development generally is promoted through the distribution of quality foundation stock.

Every encouragement is given to the production of livestock. An experimental sheep flock is maintained. Poultry and beef production have increased with favourable marketing conditions and with departmental assistance and loans under the Provincial Farm Development Loan Act. Two veterinarians supervise the health of animals program and the joint federal-provincial project for the eradication of bovine tuberculosis.

The Agricultural Division co-operates with the Department of Education in furthering the 4-H Club movement in the Province and accepts responsibility for all projects pertaining to agriculture.

Prince Edward Island.—The activities of the Provincial Department of Agriculture are suggested by its staff which includes, in addition to the Minister and Deputy Minister, a Dairy Superintendent and Assistant, two Check Testers, a Director of Veterinary Services and six subsidized practicing Veterinarians, a Horticulturist, a Soil Analysis Assistant, a Poultry Director, an Agronomist, a Director of Field Work and three Agricultural

* Information supplied by the agricultural authorities of the various provinces.

Representatives, a Chief Forester and Assistant, a Director of Farm Improvement, a Nursery Supervisor, and a Director, an Assistant Director and two Extension Workers of Women's Institutes.

Nova Scotia.—The Department of Agriculture and Marketing endeavours to “help the people to help themselves” through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, Nova Scotia Fruit Growers' Association, various agricultural co-operative organizations, credit unions and producer organizations. The Department is assisted by the Nova Scotia Advisory Committee on Agricultural Services which has been established to promote agricultural policies and projects of the Federal and the Provincial Departments of Agriculture. The Committee meets quarterly to determine how the work of these Departments may be co-ordinated and directed through integrated agricultural policies and with a minimum duplication of services.

New Brunswick.—Provincial Government agricultural policy in New Brunswick is directed by the Department of Agriculture. The Department is headed by the Minister of Agriculture who is assisted by a Deputy Minister and the Directors of the following services: extension, livestock, dairy, veterinary, poultry, horticulture, field husbandry, soils and crops, plant protection and promotion, agricultural engineering, home economics, Credit Union Co-operative Association, agricultural education, apiculture, and agricultural societies.

Quebec.—The Department of Agriculture of Quebec comprises eleven services: rural education, rural economy, extension, animal husbandry, horticulture, field husbandry, information and research, home economics, animal health, rural engineering and the secretariat. Each service is divided into sections dealing with particular problems.

The Department also includes many other special organizations such as the Research Council, the Dairy Industry Commission, the Dairy School of St. Hyacinthe, the Provincial Extension Farm (Deschambault), the Fur Bearing Animals Extension Farm (St. Louis de Courville). The Farm Credit Bureau, the Quebec Sugar Refinery (St. Hilaire) and the Veterinary College (St. Hyacinthe) are also under the authority of the Minister of Agriculture and the Office of Rural Electrification is connected with the Provincial Executive Council.

The annual competition for the Agricultural Merit Order, organized in 1890, is held successively in each of five regions. Each contest lasts five years and covers the various farm products; its main objective is to ascertain the personal merit of the competitors who have most distinguished themselves and can serve as examples. County Farm Improvement Contests have been conducted for more than twenty-two years and are still very popular. Over 6,000 competitors have already benefited from these contests which promote better methods of culture designed to increase farm income.

The Drainage Service deals with soil improvement or land reclamation by dredging the large watercourses with its own equipment or under contract and by renting equipment at very low rates to farmers who want to improve their croplands. The Department of Agriculture also gives assistance in the form of grants towards such projects. Soil improvement measures include large drainage projects carried out by the Department and smaller projects carried out by groups of farmers with government help. In 1955, 32,410 farmers benefited from help given by this Service.

Various forms of assistance are offered towards improvement of crops and livestock. An artificial insemination station operates at St. Hyacinthe for the benefit of breeders' clubs, and plant breeding stations for cereal and forage crops, vegetables and small fruits are maintained in a number of localities. Trained specialists are employed in the work of controlling plant and animal pests and diseases; the main laboratories are situated at Quebec City and field laboratories are located in different districts or in schools.

Agricultural co-operation is widespread in Quebec. There are 542 co-operatives with about 68,000 members and 89 agricultural societies with 28,865 members to serve local interests and organize county exhibitions. There are also 726 Cercles de Fermières

(Women's Institutes) in operation with a membership of 41,000; 458 farmers' clubs with a membership of 22,042, and 142 junior farmer clubs where 4,062 young boys and girls are working on numerous practical agricultural projects.

The Farm Credit Bureau was established in 1936. During 20 years of operation the Bureau has made 45,238 loans to the farmers of Quebec amounting to a sum of \$120,000,000; 21,006 of these loans were for the establishment of young men on farms.

Ontario.—The Ontario Department of Agriculture provides financial assistance and administrative services to agriculture through its Head Office, twelve branches, three experimental farms, two demonstration farms, and through research and extension work carried on at the four educational institutions under its administration. Head Office, in addition to general administration, administers policies providing assistance to farmers and settlers in northern Ontario in connection with land breaking and clearing and improvement of farms and livestock.

The Live Stock Branch promotes livestock improvement policies, licenses and examines stallions and gives support to purebred livestock associations.

The Field Crops Branch assists in the development of good cultural practices and promotes the use of improved strains of seed, the improvement of pastures and the eradication of weeds.

The Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms.

The Farm Economics Branch conducts cost studies on agricultural production in co-operation with agricultural organizations.

The Fruit Branch enforces fruit and vegetable regulations, provides information to growers and administers the Co-operative Loans Act.

The Co-operation and Markets Branch administers the Farm Products Marketing Act, the Ontario Food Terminal Act and the Farm Products Containers Act.

The Milk Control Board, under the Milk Industry Act, regulates and supervises the marketing of fluid milk.

The Agricultural and Horticultural Societies Branch gives assistance to agricultural and horticultural fairs and exhibitions, ploughing matches and other competitions, and administers the Community Centres Act.

The Extension Branch carries on an educational and extension service through agricultural representatives located in all counties and districts and gives direction to 4-H Club work and the Ontario Junior Farmers' Association. Through the Home Economics Service, the Extension Branch gives leadership and direction to organized activities of rural women.

The Statistics and Publications Branch, in co-operation with the Dominion Bureau of Statistics, provides a crop-reporting service and gathers and disseminates data on crops, livestock and dairy products.

The Ontario Junior Farmer Loan Branch administers the Ontario Junior Farmer Establishment Act.

The Horticultural Experiment Station at Vineland, the Western Ontario Experimental Farm and Agricultural School at Ridgetown, the Demonstration Farm at New Liskeard, the Kemptville Agricultural School, the Ontario Agricultural College including Macdonald Institute, and the Ontario Veterinary College at Guelph, all under the administration of the Department, provide research and extension services to Ontario agriculture.

The Ontario Department of Agriculture is also responsible for the administration of the Ontario Telephone Authority.

Manitoba.—The Department of Agriculture serves Manitoba through the following branches: agricultural extension; livestock; dairy; soils and crops; agricultural publications and statistics; weeds administration; co-operative services; and the provincial veterinary laboratory.

The Extension Service deals with agricultural economics, horticulture, poultry, agricultural engineering, beekeeping, 4-H Clubs and women's work, and has specialists devoting attention to these subjects. Meetings, field days and short courses are held. Thirty-five agricultural representatives are located throughout the Province, each serving from one to five municipalities; twelve home economists serve designated areas.

The Live Stock Branch administers the Animal Husbandry Act, develops and administers policies that encourage the improvement and production of livestock, and works in close co-operation with the Veterinary Laboratory Service and the Federal Health of Animals Division in the control of livestock diseases.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese and butter making, issues licences to makers of dairy products and to cream graders and conducts a dairy-cost study among milk producers. Extension activities include addressing meetings and preparing articles and leaflets on dairy farm problems.

The Soils and Crops Branch deals with grain and forage crops, conservation and fertility and provides liaison between the Province of Manitoba and the Government of Canada in regard to PFRA projects. The Branch develops and administers policies that encourage good field crop husbandry and conservation practices.

The Agricultural Publications and Statistics Branch publishes and distributes annually approximately 100,000 bulletins, circulars, posters, leaflets, etc.

The Weeds Administration Branch directs the activities of 18 municipal weed control units comprising 70 rural municipalities engaged in eradicating deep rooted, persistent, perennial weeds; supervises weed demonstrations; investigates weed problems; conducts weed surveys; and prepares weed literature, radio addresses, articles, pictures, mounted weed specimens, etc.

The Co-operative Services Branch takes care of the registration and supervision of co-operatives and credit unions and the administration of the Acts governing them. The Branch also collects and compiles statistics on co-operative activity throughout the Province.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of which are available to veterinarians and livestock owners.

Saskatchewan.—The Saskatchewan Department of Agriculture is organized in the following branches and services.

The Administration Branch handles general staff records and accounts. Data on crop conditions, production, marketings and income are collected and farm information dispensed daily over seven private radio stations.

The Agricultural Representative Service has a field staff of 37 agricultural representatives, four area supervisors and specialists in farm management and visual aids. An extension field staff is provided for all Branches of the Department as well as for the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services. In farm labour matters co-operation is maintained with the Federal Department of Labour and the National Employment Service in directing annual movements of farm labour in and out of the Province. Agricultural representatives work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with scientific and practical information. Committees study local farm problems and initiate improvement programs. Through an Earned Assistance Program the Department pays one-half the cost of local group development projects.

The Animal Industry Branch has four divisions. The Dairy Division administers dairy herd improvement programs and assists producers with management and production problems; inspects and licenses dairy manufacturing and frozen-food locker plants; and administers dairy, locker plant and margarine legislation. The Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of purebred

sire areas and by assistance in the purchase and distribution of stallions, bulls, boars and rams. It registers brands, licenses livestock dealers and agents and promotes programs on insect control, feeding and management. The Poultry Division maintains flock testing and turkey grading services; administers an approved hatchery policy, licenses produce dealers and poultry buyers, hatcheries and hatchery agents. It also assists with poultry shows and field days and otherwise promotes flock improvement. The Veterinary Division assists students in veterinary science under a scholarship plan, administers disease testing and vaccination programs and co-operates with Federal Government officials and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and projects. Reclamation of land by drainage, development of misused land and under-utilized land, and construction of provincial community pastures all come within its jurisdiction. The Branch administers the Farm Implement Act and provides engineering assistance to conservation and development areas, water users' districts, and irrigation districts in connection with water control projects.

The Lands Branch administers all Crown, school and Land Utilization Board lands except forest reserves and parks in the settled area of the Province; classifies it according to the use for which it is best suited; disposes of such lands under long-term leases; secures land control for land utilization projects; supervises new settlement projects and operates provincial community pastures.

The Plant Industry Branch organizes and administers programs for crop improvement and crop protection, and advises on seed and crop improvement, soil conservation, horticultural problems, weed control and management of irrigated land. The improvement of grassland is promoted through a forage crop program. The Seed Plant Division carries on custom cleaning of forage seeds and registered cereals. The Apiary Division advises on beekeeping and honey production, supervises and carries on continuous inspection.

Alberta.—The Alberta Department of Agriculture is organized in the following branches and services.

The Field Crops Branch administers programs and policies relating to crop improvement, soil conservation and weed control, crop protection and pest control, horticulture and apiculture. Agricultural Service Boards have been organized in municipal districts to assist with agricultural programs, and the Department of Agriculture is represented on each Board.

The Live Stock Branch aids in maintaining the quality of herds and flocks by assisting farmers in securing purebred herd sires and assists artificial breeding associations in the breeding of dairy cattle. The Branch also supervises livestock feeder associations and administers legislation relating to stock inspection, brands, domestic animals and the sale of horned cattle.

The Dairy Branch administers the Dairymen's Act and the Frozen Food Locker Act. Grading and purchasing of raw produce by all dairy plants are under regulation, as are standards of construction, manufacture, processing, sanitation, and temperature control for dairies and frozen food lockers. A regular cow-testing service is available to dairy producers and the Branch laboratory conducts chemical and bacteriological analyses needed for industrial directives. Yearly cost studies and dairy farm management services are in operation in the principal milk-producing areas.

The Poultry Branch carries on programs for the improvement of poultry husbandry and supervises flock approval for the control of pullorum disease. The Branch issues hatchery, wholesale, first receiver and truck licences for the handling of poultry products.

The Veterinary Services Branch provides scientific diagnoses of livestock and poultry diseases through its laboratory; conducts investigations of disease conditions; lectures in veterinary science at the University of Alberta, Schools of Agriculture, and many meetings; and promotes government policies aimed at reducing losses throughout the Province.

The Agricultural Extension Service operates 43 offices and employs the services of 56 districts agriculturists and 20 district home economists. The district agriculturists assist farmers with their problems and advance departmental policies designed to improve the standard of agricultural practices. The district home economists provide a similar service for farm women. Bulletins are prepared dealing with agricultural and home economics topics. The Branch is responsible for the supervision of agricultural societies and, in co-operation with the Federal Department of Labour, is concerned with recruitment and placement of farm labour.

The Fur Farms Branch administers the licensing and exporting of live animals and pelts, and assists fur farmers in care, management and stock improvement.

Schools of Agriculture and Home Economics are operated at Olds, Vermilion and Fairview (see p. 412).

A Radio and Information Branch conducts five broadcasts a week over seven radio stations and issues weekly bulletins to press and radio.

The Water Resources Branch deals with water rights, drainage, irrigation, and water power development.

The Land and Forests Utilization Committee, composed of representatives from the Department of Lands and Forests, Power Commission, Department of Municipal Affairs, University of Alberta and the Department of Agriculture, deals with the proper use of submarginal agricultural land.

British Columbia.—The Department of Agriculture has four main branches. The Administrative Branch is responsible for the general direction of agricultural policies, administration of legislation affecting agriculture and for the compilation of reports and publications. This Branch also maintains direct supervision of the Field Crops, Soil Survey, Plant Pathology, Entomology, Apiary, Markets and Statistics, Farmers' Institutes and Women's Institutes Branches.

The Livestock Branch engages in the promotion and supervision of the livestock industry and provides veterinary services affecting disease control regulations as well as supervising stock brands, inspection of dairy and fur farm premises, and inspection of beef grading. The Branch also supervises the operations of the Dairy Branch in the inspection of commercial dairy premises. Officials are stationed at 11 centres throughout the Province.

The Horticulture Branch supervises fruit, vegetable and seed production, and provides advice on plant diseases and insect pest control. The Branch maintains field offices at 11 points in the southerly section of the Province.

The Agricultural Development and Extension Branch offers general information services to farmers through 20 offices which cover all major farming districts. In addition, this Branch provides agricultural engineering service, supervision of the Government land clearing program, farm labour services and promotion of junior club projects. The Poultry Section of the Branch offers extension services to the poultry industry.

Subsection 2.—Agricultural Colleges and Schools

All provinces provide facilities for training in agricultural science at university level. Such colleges are administered by either the Department of Agriculture or the Department of Education of the respective province.

Newfoundland.—There are no agricultural colleges in the Province, but the Agriculture Division of the Department of Mines and Resources provides a number of scholarships annually for young men to attend agricultural colleges in other provinces.

Prince Edward Island.—A two-year course in scientific agriculture offered at Prince of Wales College, Charlottetown, prepares students for third year at Macdonald College, Que.

In the Vocational School short courses provide knowledge and skill in agricultural pursuits and develop in the student a sense of the dignity and importance of agriculture as a calling and an understanding of the importance of the industry to the Province.

Nova Scotia.—The Nova Scotia Agricultural College at Truro offers three courses: the first two years of a degree course in agriculture; a two-year course in general agriculture; and a two-year course in vocational agriculture. The College assists in conducting short courses at various provincial centres, supports Folk Schools and gives direction to 4-H Club organizations. Tuition is free for Canadian students.

New Brunswick.—The Province's four Agricultural Schools are located at Woodstock, Fredericton, St. Joseph and St. Basile. Two-term agricultural courses extending over five months each year are offered at St. Joseph, Fredericton and St. Basile and at Woodstock a three-year course is conducted. The curriculum includes training in all phases of agriculture, shop and general academic work. Ten-month home economics courses are also offered at Woodstock and St. Joseph.

Quebec.—Courses in agricultural schools in Quebec include a four-year university course leading to a degree of Bachelor of Science in Agriculture at the following universities: Laval Faculty of Agriculture (Ste. Anne de la Pocatière); L'Institut Agricole d'Oka (affiliated with the University of Montreal); and McGill Faculty of Agriculture (Macdonald College). At the Provincial Veterinary School (St. Hyacinthe), affiliated with the University of Montreal, a four-year course is offered leading to a Doctorate in veterinary medicine. There are nine secondary agricultural schools throughout the Province, and ten regional schools and six orphanages offer courses in agriculture. More than 1,500 students, the great majority of whom are sons of farmers, attend these intermediate and regional schools of agriculture and in the orphanages 150 pupils follow practical agricultural courses. A farm is always annexed to the school for practical training and specialists give instruction on the maple sugar industry, farm mechanics, co-operatives, plant protection, veterinary hygiene, aviculture, marketing and silviculture. School co-operatives and clubs are organized and directed by the pupils under the supervision of their professors. Household science training for the daughters of farmers and settlers is given in five of these schools.

Ontario.—The two-year course of the Ontario Agricultural College for the Associate Diploma in Agriculture provides basic training in agriculture. Young persons interested in making agriculture their vocation study the application of science to agricultural practice and receive training for rural citizenship.

The four-year course for the degree of Bachelor of Science in Agriculture gives fundamental education in the science of agriculture. A sound training is provided for farming as a profession, for entrance into government extension and allied agricultural services, agricultural industry, teaching and, for those who wish to proceed to graduate studies, for the Master's and Doctorate degrees.

Graduate courses are offered leading to the degree of Master of Science in Agriculture. Graduate students are enrolled in a department or departments of the Ontario Agricultural College conjointly with a department or departments of the University of Toronto for advanced courses of study and training in experimentation and scientific investigation. M.S.A. graduates may go into teaching, research, or for further postgraduate study.

Macdonald Institute offers young women a one-year course of practical training in the art and science of homemaking. This earns a diploma of merit but gives no professional standing. A four-year professional course is available leading to a Bachelor of Household Science degree granted by the University of Toronto. University matriculation standing is necessary to enter the four-year course.

The Ontario Veterinary College offers a five-year course leading to the degree of Doctor of Veterinary Medicine. In addition to its function as a teaching institution, the College is a research centre for diseases of animals and provides free consultation for veterinary surgeons in practice as well as extension services in the interests of the livestock industry.

The Kemptville Agricultural School offers diploma courses as follows: a two-year diploma course in agriculture (two terms of six months each) giving practical training in modern farm methods designed primarily for young people who wish to farm but serving also as a preparation for many other occupations closely connected with agriculture (stress is laid on the development of community leadership); one year advance course in agriculture mechanics for diploma graduates in agriculture; a one-year diploma course (six-month session) leading to a diploma in homemaking and qualification for the less exacting positions in fields of home economics; a two-year diploma course (two terms of six months each) for girls wishing to prepare for positions in the tourist trade, food services, sewing centres and other fields of home economics; a three-month winter course for all dairy apprentices leading to the Dairy School Diploma required for certified buttermakers, cheesemakers and operators of dairy manufacturing plants. A 450-acre school farm and residence life are features of the Kemptville Agricultural School.

Western Ontario Agricultural School offers a practical course for young men who propose to return to farming. It consists of two winter courses of 20 weeks each, starting late in October and ending late in March. All subjects relating to agriculture are included in the curriculum.

Manitoba.—The Faculty of Agriculture and Home Economics of the University of Manitoba offers degree courses in agriculture and home economics as well as the two-year, sub-collegiate diploma course in agriculture. Practical one-season courses in agriculture and homemaking are also given at the Brandon Agricultural and Homemaking School. Graduates in agriculture from this School are admitted to the second year of the diploma course at the University.

Saskatchewan.—Saskatchewan offers a degree course in agriculture designed to meet the needs of those who intend to teach agriculture in secondary schools or colleges, to engage in research or administrative work, or to farm. Specialization is possible with permission of the faculty. Provision is made for combined courses in agriculture and arts or commerce. Postgraduate courses are available.

The Saskatchewan School of Agriculture offers a practical course intended to give sound training in farm practice and also to train young men to become rural leaders.

All courses leading to a degree in home economics require four years. The prescribed course of studies for the first two years is the same for all pupils but in the third and fourth years four types are offered: (1) for teachers, (2) for dietitians, (3) general, and (4) additional specializations. A combined course leading to a degree in arts and science and in home economics requires at least five years.

Alberta.—The University of Alberta offers a four-year degree course in agriculture to students with senior matriculation or its equivalent. Students may elect a general program or major in a wide range of special courses in the fields of animal science, economics, entomology, dairying, plant science, and soils. Graduate work at the Master's level is offered in all departments and at the Doctorate level in some.

The Alberta Schools of Agriculture and Home Economics, located at Olds, Vermilion and Fairview, offer practical courses in agriculture and homemaking. The purpose of the schools is to train young men for farming and young women for homemaking. Boys and girls must have Grade IX standing for entrance into the regular two-term course. A one-year course is offered to those who have 70 or more high school credits. Modern living accommodation is provided as well as auditorium and gymnasium facilities.

During the summer months the schools are used for agricultural meetings and conferences of organizations that are connected with agriculture. During the month of July, leadership courses, 4-H Club gatherings, farm camps and other events keep the facilities in constant operation.

British Columbia.—The Faculty of Agriculture at the University of British Columbia offers a four-year general degree course in agriculture and a five-year honours course. In the honours course there are 15 fields in which a student may specialize. Work is also offered by the Faculty of Agriculture in the Faculty of Graduate Studies through

which a student may proceed to the degrees of Master of Science in Agriculture and Master of Science; in a limited number of fields, work is offered at the Doctorate level. The Faculty also offers a one-year or two-year diploma course in occupational agriculture, adaptable to the needs of individual students.

In co-operation with various branches of the provincial Department of Agriculture and under the auspices of the University Extension Department, the Faculty of Agriculture also offers a number of short courses which vary in length from one or two days to several weeks.

Section 3.—Agricultural Irrigation and Land Conservation

Subsection 1.—Federal Projects*

Prairie Farm Rehabilitation Act

The Federal Government passed the Prairie Farm Rehabilitation Act in 1935 authorizing an expenditure of \$4,750,000 over a five-year period to provide for the rehabilitation of the drought and soil drifting areas in the Prairie Provinces. An amendment in 1937 extended the scope of the program by providing for the withdrawal of poor quality lands from cultivation and the resettlement of the farmers operating such lands. A further amendment in 1939 removed the limitation as to time and amount of expenditure. The policies and projects carried out under the Act vary widely in nature and scope but each has as its objective the better utilization of land to minimize the problems of drought, or the conservation of water for farm purposes.

Special votes have been passed by Parliament from time to time for the development of large irrigation projects in the Prairie Provinces and land reclamation and development works, including flood control, which because of their size are not included in the PFRA appropriation. These works, however, are carried out by the PFRA organization, which has its head office in Regina, Sask. Most of the large undertakings under the special votes are carried out and financed jointly with the provinces under agreements setting out the responsibilities of each party in the development work.

Water Conservation Projects.—PFRA provides engineering and financial assistance to farmers in the construction of water conservation works as a rehabilitation measure within drought areas of the three Prairie Provinces. The amount of financial assistance awarded is largely dependent upon the type and size of the project contemplated. At all times PFRA policy is to provide assistance to farmers to rehabilitate themselves. Authority to proceed with construction is secured through the respective provincial water rights departments.

During 21 years of operation PFRA has provided assistance to farmers to construct 52,461 individual farm dugouts and small dams, many of which are suitable for irrigation. These projects have extended widely the benefits of water throughout the dry areas. Adequate water storage facilities have been provided where water shortages exist and dependable water supplies assured, through irrigation for domestic requirements, for stock watering and for the production of livestock feed. Thus a great many farmers have been rehabilitated on their present holdings.

The development of community projects is necessarily confined within the narrow reaches of well-defined watersheds where sufficient water resources are available. Where a group of farmers organizes a water users' association or a rural municipality provides leadership in an irrigation or water storage project, PFRA co-operates with the local body. The usual procedure is for the Government of Canada to assume the capital cost of storage and connecting works and the provincial body to assume the responsibility for the distribution of water to the land or along the watershed. The local body also undertakes maintenance and operation.

* Prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, by G. J. Matte, Associate Director of Rehabilitation.

To Mar. 31, 1956, PFRA provided the necessary assistance to construct 357 community projects, the majority of which are located on six watersheds originating in the three Prairie Provinces. These projects conserve the surplus spring runoff water to supplement short supply later in the year. Community projects also provide homes for farmers moved from submarginal areas to where they can be assured a livelihood.

PFRA's responsibility for the development of large community irrigation schemes terminates with the construction of primary reservoirs and connecting canals. However, where the need for early returns to farmers proved imminent, PFRA has assisted further in the development of the irrigable land and has maintained a constant surveillance of the project's operations and progress. At times agreement has been reached between PFRA and the provincial government concerned whereby PFRA provides engineering and financial assistance to construct primary works and the province agrees to assist with the development of the irrigable area. Such an agreement is in effect in connection with sections of the Swift Current Irrigation project being developed in Saskatchewan.

Major Irrigation Projects.—*St. Mary Irrigation Project.*—The St. Mary Irrigation project was undertaken by agreement between the Government of Canada and the Province of Alberta. The Government of Canada agreed to construct the main supply reservoirs and connecting works. The Province undertook the responsibility for construction of the auxiliary reservoirs and distribution system from the main works to the land. The St. Mary River System is by far the most important irrigation project undertaken in Canada and, when completed, will irrigate an area of approximately 510,000 acres. Construction of the St. Mary Dam, key structure on the whole project, was completed in 1951. It is 195 feet high and 2,536 feet wide and creates a reservoir capable of storing 320,000 acre-feet of water. Approximately 200 miles of main canal have been built.

South Saskatchewan River Development.—This development in central Saskatchewan is a proposed multi-purpose project to be used for developing power and irrigation, the irrigable area lying between the town of Elbow and the city of Saskatoon. The key structure on the project will be a dam on the South Saskatchewan River located at a point midway between the towns of Outlook and Elbow.

The plan is to stabilize agriculture in the south central area of the Province where prolonged droughts have created serious economic problems for over 50,000 farmers. Full use will be made of the river's control, power, urban water supply and recreational benefits.

Bow River Irrigation Project.—The Bow River project was purchased by the Government of Canada in 1950 from the Canada Land and Irrigation Company, a private British interest. Development of this project will ensure water supply to 100,000 acres of land at present irrigated and will bring an additional 140,000 acres of provincial and privately owned lands "under the ditch". Work has progressed rapidly on construction and the repair and enlargement of old structures. The Government of Alberta is responsible for the construction of the distribution system for provincial and privately owned lands (see p. 417).

Red Deer Irrigation Project.—The proposed Red Deer River development concerns the irrigation of an estimated 400,000 acres of land located in the east central part of Alberta. The project will consist of a dam on the Red Deer River at Ardley and about 100 miles of main canal to two main reservoirs—Craig Lake and Hamilton Lake. The dam will contain power installations to produce power for pumping and also for sale commercially. An estimated 20,000,000 kwh. of water power will be available for sale when power is fully developed.

British Columbia Projects.—Irrigation development in British Columbia has been undertaken in connection with the Veterans' Land Act and at the request of the British Columbia Government. Three projects (the Chase irrigation project and the Johnstone Western Canada ranching projects No. 1 and No. 2) have been completed within the South Thompson Valley area. On these projects 809 acres of land have been developed for irrigation for the benefit of approximately 40 veterans of World War II.

In the Okanagan Valley three new projects have been completed, the Westbank irrigation project and the Bankhead project near Kelowna, and the Cawston Benches project located east of the town of Keremeos. The three projects irrigate 1,782 acres of land and provide locations for 170 veterans of World War II. The Penticton West Benches project, irrigating approximately 200 acres and accommodating 97 veterans on small holdings was completed in 1953.

Intensive farming is practised in the Okanagan and South Thompson Valleys. The land developed for irrigation by PFRA is used mainly for the growing of small fruits and vegetables and for dairying.

Reclamation Projects.—*Riding Mountain Reclamation Project.*—At the request of the Manitoba Government extensive investigations have been undertaken by PFRA in the Riding Mountain area where a serious flood problem exists on a number of streams flowing off the north and east slopes of Riding Mountain and Duck Mountain. The land area affected by flooding is in the neighbourhood of 252,000 acres. The cost of reclamation is borne jointly by the Governments of Canada and Manitoba. Construction work consists of clearing and dyking stream channels, prevention of streambank erosion, and aligning channels by building cutoffs and diversions.

Assiniboine River Project.—This project is being undertaken by PFRA at request of the Manitoba Government to prevent flooding on the Assiniboine River, particularly between Brandon and Virden and between Portage la Prairie and Headingly, where thousands of acres of valuable agricultural land have been inundated repeatedly. Detailed study is being given to water runoff data in the Assiniboine River Drainage Basin, and the building of water storage works on the headwaters of the Assiniboine River is under way.

Saskatchewan River Reclamation Project.—Surveys and investigations were made by PFRA to determine the possibility of successfully reclaiming land for agriculture in the Pasquia area of the Saskatchewan River delta region near the town of The Pas in Manitoba. As a result an agreement was reached early in 1953 between the Government of Canada and the Province of Manitoba for the construction of the necessary reclamation works to protect the area from flooding and to settle about 96,000 acres of suitable land—the Government of Canada to assume the cost of building the main protective works, and the Province the costs of settlement, maintenance of works, and internal drainage. One-half of the reclaimed land is to be reserved for the resettlement of farmers from drought areas and the remainder is to be sold. Part of the proceeds from the sale of the lands will go to the Federal Government as a partial reimbursement of the costs of building the main protective works. Construction began early in 1953.

Lillooet Valley Reclamation Project.—This project was undertaken upon agreement between the Government of Canada, the Government of British Columbia and the Pemberton Valley Reclamation District and is located in the Lillooet River Valley above and below the town of Pemberton. Its objective is to protect lands now under cultivation from flooding and to reclaim additional lands by dyking and drainage. The land so far reclaimed amounts to 14,000 acres, which allowed farmers in the district to increase their holdings and permits the settlement of hundreds of additional inhabitants.

Land Utilization.—In addition to cultivation and water conservation activities, rehabilitation of drought areas involves the conversion of large tracts of land (proved unsuitable for crop production) to livestock production through cultivation of a permanent grass cover and the relocation of farmers residing thereon. To this end the PFRA land utilization program has constructed 62 operating pasture units, resulting in the reclamation of 1,712,240 acres of submarginal land. During the year ended Mar. 31, 1956, summer grazing was provided for 108,537 head of livestock owned by 5,632 patrons living on lands adjacent to these pastures.

An extensive improvement program is in effect on all pastures and is begun as soon as new areas are enclosed. This policy has more than doubled the 1938 average carrying capacity on pasture land. The improvement policies most extensively practised in al

pastures are: regrassing—since 1938 approximately 193,083 acres of land in community pastures have been regrassed; development of stock watering sites—to Mar. 31, 1956, over 1,000 stock watering dams, dugouts and wells have been constructed in community pastures; and pasture management and controlled grazing.

Maritime Marshlands Rehabilitation Act

The marshlands of Prince Edward Island, Nova Scotia and New Brunswick are among the more productive soils in Canada when protected from tidal flooding and properly cultivated. They are composed of deposits laid down by tidal waters and are for the most part adjacent to the Bay of Fundy.

The initial areas were reclaimed as early as 1630 and since that time about 80,000 acres have been protected by dykes and aboiteaux, but through a variety of circumstances—loss of cattle markets, loss of hay markets and the increase in labour costs—maintenance of these protective structures was not adequately carried out and deterioration resulted. Because the marshlands, when protected, are important in the agricultural economy of the provinces concerned, the Government of Canada and the Provincial Governments of Nova Scotia and New Brunswick passed legislation permitting a program of reclamation and rehabilitation of these lands. The federal Act (the Maritime Marshlands Rehabilitation Act) was passed in 1948 and complementary provincial marshland reclamation Acts were passed by the Nova Scotia and New Brunswick Governments in 1949. These Acts permitted agreements to be signed whereby the Government of Canada would construct or reconstruct the protective works and would assume the responsibility of maintaining these works until they were turned over to the Provinces. The Federal Government is responsible also for any engineering work in connection with the complete program. The Provinces are responsible for the organization of the marsh areas, the freshwater drainage and acquisition of any land required and for the initiation and follow-up of a suitable land-use program. Because of the small area of marshland in Prince Edward Island no provincial legislation was considered necessary in that Province.

By Mar. 31, 1956, the Provinces had asked to have 151 areas considered for reclamation purposes. These comprised 35,565 acres in New Brunswick, 46,251 acres in Nova Scotia and 275 acres in Prince Edward Island. This total of 82,091 acres constitutes an integral part of the estimated 490,000 acres of farm land in the three provinces.

Investigations to determine the advisability of constructing a large structure to eliminate the need for many miles of dyke and many aboiteaux are being carried out on the Annapolis River in Nova Scotia and on the Tantramar and Shepody Rivers in New Brunswick. Construction on the Shepody River project was started in 1953 and all major works were completed in 1956.

Subsection 2.—Provincial Projects

Saskatchewan.*—The Conservation and Development Branch, established in 1949, was made responsible for: administration of water rights; irrigation development, engineering and structures; flood control and drainage; restoration of abandoned, under-utilized and misused lands; and construction of provincial community pastures outside the area covered by the agreement with PFRA and not provided for in the agreement with the Federal Government.

The Provincial Department of Agriculture's conservation and development activity in the field of agricultural rehabilitation and reclamation is based on co-operation with the Federal Government's PFRA program with which a close working arrangement is maintained. Following is a summary of the activities of the Saskatchewan Department of Agriculture as at Dec. 31, 1956.

Water Rights.—Under the Water Rights Act, 5,719 water storage projects for domestic irrigation, municipal and industrial purposes covering 460,702 acre-feet of water have been licensed, and there are 111 gauging stations being maintained to complete hydro-

* Prepared by W. H. Horner, Deputy Minister, Saskatchewan Department of Agriculture.

metric surveys and a surface water inventory. The Water Rights Office represents the Province of Saskatchewan on the engineering committee of the International Joint Commission and on the Prairie Provinces Water Board.

Irrigation Development.—By the end of 1956, 114,010 acres of topographic surveys and 148 miles of strip topographic surveys were completed on irrigation projects; 295 miles of ditch were built and 143 miles maintained; 1,383 structures were installed and 27 maintained; and 4,993 acres were levelled.

Drainage Development.—Topographic surveys covered 136,804 acres and 5,240 miles of strip topographic surveys were completed on drainage projects; 832 miles of ditch and 245 miles of road were built and 148 miles of ditch maintained; 12 miles of dyke were built and 793 structures installed in drainage systems.

Development of Under-utilized and Misused Lands.—A total of 48,387 acres of tame perennial forage crops were seeded, mostly for fodder production; and 671 miles of fence were built or rebuilt in the establishment of departmental, municipal or co-operative pastures.

Miscellaneous Project Work.—Such projects included: regrassing about 17,564 acres; planting 580,700 trees; constructing 112 dams and dugouts (with the co-operation of groups of farmers in the area of northern Saskatchewan outside the boundaries of the PFRA program); and organizing 91 conservation areas covering 11,387,904 acres, in order to help local farmers install and maintain drainage and other conservation works.

Pasture Development.—Through the Lands Branch of the Provincial Department of Agriculture the Province has transferred title to 1,194,415 acres and leased without charge another 311,437 acres of grazing land to PFRA for the development of community pastures. Outside the PFRA program, the Province developed an improved 775,836 acres, making a total of 2,281,688 acres available as community pasture land. The 103 pastures outside the PFRA program are operated by co-operative associations, by municipalities or by the Provincial Department of Agriculture; those operated by the Province provided grazing in 1956 for 16,436 cattle owned by 866 local farmers.

Development of Land for Cultivation.—Crown lands, either under cultivation or suitable for cultivation, are leased for a 33-year period. The Province may either reimburse farmers in cash for the cost of clearing and breaking virgin land or the farmers may retain crop shares equivalent in value to costs sustained. To Mar. 31, 1957, the investment of the Province, recorded by the Lands Branch of the Provincial Department of Agriculture, for land clearing and breaking amounted to \$5,739,292, and included work done in six settlement projects involving about 240 farm units where 50 acres were cleared and broken before the land was leased.

Alberta.*—The Alberta Water Resources Act gives the Minister of the Department of Agriculture wide powers to investigate the water resources of the Province and extensive surveys have been carried out to determine the distribution and extent of the available water supplied in the Province and the most beneficial use for irrigation, water power and other purposes. The Water Resources Branch of the Provincial Department of Agriculture administers the licensing of water power projects and the construction work in several irrigation projects. Irrigation projects are also licensed and water allocated for domestic and irrigation purposes. Other work includes administration of drainage districts, co-operation on the Peace River Dug-out Project and on river protection projects where flooding occurs. In more recent years much of this work has been carried out by the Federal Government in co-operation with the Provincial Government.

Stream measurement is being done by the Hydrometric Service of the Federal Department of Northern Affairs and National Resources and irrigation surveys are carried out largely by the water development organization under the PFRA (see p. 413).

* Prepared by R. M. Putnam, Deputy Minister, Alberta Department of Agriculture.

The Calgary Power Company has completed a fairly detailed water power survey of the Bow River and its tributaries and, as a result has constructed a number of water power reservoirs and power stations on the stream. Also, in co-operation with the Provincial Government, the Company has made a preliminary survey of Lesser Slave River and the Athabasca River from Athabasca to McMurray. The study of the North Saskatchewan basin is continuing more particularly in its main tributary, the Brazeau, where foundation, topographic and hydrometric information is being gathered. This study will cover measures to increase power supply and augment low winter flow.

By Order in Council, Feb. 17, 1941, the St. Mary and Milk Rivers Water Development Committee was set up to investigate and report on the many phases of irrigation development of southern Alberta, including water supplies available to Canada from the Waterton, Belly, St. Mary and Milk Rivers; the most feasible plan to put these waters to the most beneficial use; the benefits that such water development projects would confer on federal and provincial interests; the allocation of costs; and methods that might be adopted to finance such developments. The Committee completed a thorough investigation and published a comprehensive report on the projects on the international streams, and also on other projects in the Province.

The allocation of water to the major irrigation projects in Alberta, as approved by the Prairie Provinces Water Board, is as follows:—

<i>Project</i>	<i>Acres Irrigable</i>	<i>Water Allocation in Acre-feet</i>
St. Mary-Milk Rivers Development.....	465,000	796,000
Western Irrigation District.....	50,000	85,700
Eastern Irrigation District.....	281,000	562,000
Bow River Irrigation Development.....	240,000	478,534
United Irrigation District.....	34,000	51,000
Lethbridge Northern District.....	96,135	150,000
Mountain View Irrigation District.....	3,600	6,000
Aetna Irrigation District.....	7,300	13,000
Leavitt Irrigation District.....	4,400	7,000
Macleod Irrigation District.....	5,000	8,000
Private Projects.....	70,000	80,000
TOTALS.....	1,256,435	2,237,234

Developments during 1955-57 are outlined as follows:—

Irrigation.—Operation problems in the irrigated areas were under special study, particularly alkali and seepage.

St. Mary-Milk Rivers Development.—The low line canal was completed. A canal and diversion works from Waterton-Belly to the St. Mary dam was under construction by PFRA, and special soil studies were being made of the area under the high line canal.

Bow River Development Project (Western Block).—The construction phase of this project was started late in 1953. The irrigable area is approximately 60,000 acres and 17,000 acres were ready for operation. This development is the responsibility of the Province of Alberta.

Heart River Project.—Water became available to the towns of McLennan, Falher and Girouxville through this project.

River Protection and Stream Control.—Work proceeded on the Milk, Crowsnest and Bow Rivers.

High Prairie-Enilda Flooding.—Surveys were made to ascertain the possibility of controlling the East and West Prairie Rivers in the High Prairie-Enilda delta on the west end of Lesser Slave Lake.

Pembina River Flooding Problem.—Surveys were made to determine the feasibility of constructing cutoffs in the Pembina River channel to speed the water out of the Manola-Jarvie flood areas.

Erosion.—The soil erosion problems in some areas have long been of considerable concern, with the immediate problem located in the Kleskun Hills near Grande Prairie. Remedial work under way consists of the construction of a system of flumes and drop structures to control gullying.

Industrial Water.—This phase of water development is becoming increasingly important to the progress of the Province. During 1956-57 several large industrial plants received water licences.

British Columbia.*—About 20 p.c. of the arable land in British Columbia is under cultivation and nearly all the grazing area is being utilized. The estimated 1,300,000 acres developed give a ratio of approximately one acre per person. Within this arable area there exists an estimated 210,000 acres of irrigated land, and the total acreage of irrigable land in British Columbia is estimated at 400,000 acres.

About three-quarters of the irrigated area is made up of individual projects and the other quarter is served by the larger irrigation projects listed in Table 5.

* Prepared by the Comptroller of Water Rights, British Columbia Department of Lands and Forests.

Section 4.—Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information obtained through the Censuses of Canada and partial-coverage surveys may be obtained in reports issued by the Bureau.†

The Bureau also collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, values of farm lands, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to the marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings.

In the collection of annual and monthly statistics the Federal Department of Agriculture and the Provincial Departments of Agriculture, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, co-operate with the Bureau. Also, many thousands of farmers throughout Canada send in reports voluntarily.

The figures (except for 1956 Census data) contained in this Section do not include estimates for Newfoundland. Agriculture plays a relatively minor part in Newfoundland's economy, commercial production of most agricultural products being quite small.

Subsection 1.—Cash Income from the Sale of Farm Products 1956

Preliminary estimates indicate that, during 1956, Canadian farmers (excluding Newfoundland) realized \$2,662,100,000 from the sale of farm products. This estimate, which includes participation payments on previous years' grain crops, is about 13 p.c. above the \$2,357,100,000 for 1955, but is still below the all-time high of \$2,849,300,000

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

† Copies obtainable from the Dominion Statistician or the Queen's Printer, Ottawa.

established in 1952. Cash income for 1956 was up in all provinces, the increases varying from less than 1 p.c. in Ontario to about 40 p.c. in Saskatchewan. Higher returns from the sale of grains, cattle, hogs, poultry and eggs, together with larger grain participation payments, contributed largely to the increase. Supplementary payments made under the provisions of the Prairie Farm Assistance Act to farmers in Western Canada amounted to about \$5,000,000 in 1956 as against \$33,300,000 in 1955.

Field Crops.—Greatly increased marketings and higher average prices brought cash income from the sale of wheat during 1956 up to approximately \$460,000,000, about 40 p.c. above the \$329,500,000 realized in 1955. This increase of about \$130,000,000 in cash returns represents the largest contribution of any single commodity to the gain in total cash income. Wheat participation payments, totalling nearly \$62,000,000 in 1956, were well above the \$26,000,000 distributed a year earlier. Marketings of oats and barley were also up substantially from the level of 1955 resulting in a cash income of about \$150,000,000 as against nearly \$98,000,000. On the other hand, participation payments on these two grains in 1956 were only slightly above the 1955 level. Estimated income from the sale of flaxseed reached an all-time record in 1956 at close to \$62,000,000. The advance of 52.6 p.c. over the 1955 estimate of \$40,500,000 resulted from both increased marketings and higher prices. Higher returns from the sale of potatoes were also the result of a combination of larger marketings and somewhat higher average prices, but smaller marketings reduced the income from corn.

Livestock and Poultry.—Cash income from the sale of livestock in 1956 was estimated at \$736,600,000 as compared with \$702,900,000 for 1955. The gain was almost entirely contributed by higher returns from the sale of cattle and hogs. Higher marketings of cattle more than offset slightly lower prices and an increase in both marketings and prices provided an income from hogs of approximately \$302,000,000, an increase of 4.3 p.c. over the estimate of \$289,600,000 for 1955. The 1956 returns from calves were only slightly above the 1955 level. Income from the sale of poultry meat reached a new high in 1956 at \$161,200,000, approximately 7 p.c. above the returns of \$150,500,000 for 1955.

Dairy Products.—Cash income from the sale of dairy products rose from \$438,400,000 in 1955 to an all-time high of \$445,900,000 in 1956. Somewhat larger quantities of these products were marketed at slightly higher prices.

Eggs.—Farm cash returns from the sale of eggs at \$143,800,000 in 1956 were 8.5 p.c. above the \$132,600,000 realized in 1955. Almost all of the increase was the result of higher marketings since average prices were only fractionally above the level of the previous year.

Net Income of Farm Operators from Farming Operations 1956.—Net income of Canadian farmers from farming operations (excluding Newfoundland) estimated at \$1,573,000,000 in 1956, continued upward from the postwar low of \$1,161,000,000 established in 1954. The current estimate is 10.5 p.c. above the \$1,423,200,000 for 1955 and also above the average for the postwar years (1946-55) of \$1,547,400,000. The all-time high net farm income estimate was recorded in 1951 and amounted to \$2,154,500,000.

Gains in cash income and value of income in kind were offset to some extent by higher farm operating expenses and depreciation charges and a lower total value of inventory changes. All provinces except Nova Scotia, Ontario and British Columbia recorded increases in 1956 over 1955.

Subsection 2.—Index Numbers of Physical Volume of Agricultural Production

A preliminary estimate places the index of physical volume of agricultural production for 1956 at 165.3 (1935-39=100), 10.3 p.c. above the estimate of 149.9 for 1955. The current estimate is only fractionally below the all-time high of 166.0 established in 1952 and replaces the previous second-place estimate of 164.2 recorded in 1942.

The increase in total agricultural production in 1956 over 1955 is largely attributable to the larger grain crops harvested in the Prairie Provinces. Contributing also to the increase were larger outputs of livestock, dairy products, poultry, eggs, sugar beets, tobacco and maple products; the gains in production of livestock and dairy products were very small and there were lower outturns of potatoes, fruits and vegetables.

Increased agricultural production was recorded for all provinces except the Maritimes and British Columbia. On a percentage basis the provincial gains ranged from slightly over 2 p.c. in Quebec and Ontario to nearly 33 p.c. in Saskatchewan. Reductions in output varied from nearly 5 p.c. in British Columbia to more than 6 p.c. in the Maritimes.

10.—Index Numbers of Physical Volume of Agricultural Production by Province 1947-56

(1935-39=100. Exclusive of Newfoundland)

NOTE.—For a description of this index, methods and coverage, see *DBS Quarterly Bulletin of Agricultural Statistics* for April-June, 1952. Figures for 1935-44 are given in the 1950 Year Book, p. 420, and for 1945 and 1946 in the 1956 edition, p. 423.

Subsection 3.—Field Crops

Following a sharp reduction in crop output in 1954 when rust took a heavy toll, Canadian farmers experienced two very satisfactory seasons in 1955 and 1956 from the production point of view. Despite a somewhat late seeding season in many parts of Canada, weather conditions during the summer and autumn of 1955 were generally favourable to good growth and development of crops. Average yields per acre for the 21 crops for which estimates are made either equalled or exceeded those of 1954 except for buckwheat, dry peas, rapeseed and field roots. New production records were set in corn for grain, soybeans and mustard seed. In 1956 the seeding season was again delayed in many parts of Canada but, as in the previous year, weather conditions during the summer and autumn were generally favourable and yields of most crops were well above average. Early autumn frosts and excessive rains in the Prairie Provinces lowered the quality of the wheat crop somewhat and in Eastern Canada excessive rains during the haying season caused harvesting difficulties. Average yields per acre for the 21 crops for which estimates are made exceeded those of 1955 except for winter wheat, fall and spring rye, corn for grain, soybeans, sunflower seed, hay, fodder corn and sugar beets. New production records were set in 1956 for flaxseed, rapeseed, mustard seed and mixed grains.

Marketings of the five major grains (wheat, oats, barley, rye and flaxseed) totalled 567,029,000 bu. in 1955-56 and 584,911,000 bu. in the 1956-57 crop year. These amounts were well below the record 1952-53 year when marketings reached 844,900,000 bu. but compared favourably with the ten-year (1947-48—1956-57) average of 577,957,000 bu. Combined exports of the same grains (including wheat flour, rye flour, rolled oats and oatmeal, malt, and pot and pearl barley) amounted to 406,528,000 bu. in 1955-56 and 390,003,000 bu. in 1956-57. Exports during the period were somewhat above the ten-year average of 381,753,000 bu. However, exports and domestic disappearance during the period did not increase in proportion to the increase in crop production and as a result stocks of grain in Canada continued to build up.

COMPARISON OF LAND USE BY SPECIFIED CROPS,
PRAIRIE PROVINCES, 1949 AND 1957

The gross value of production of principal field crops on Canadian farms in 1955, based on average prices received by farmers throughout the 1955-56 crop year, was estimated at \$1,807,114,000. On the same basis, in 1956 the value had decreased slightly to \$1,757,332,000. These amounts were well below those established in the record-breaking year of 1952 when the total reached \$2,306,397,000 and the 1951 total of \$2,120,301,000, but compared quite favourably with other postwar years. Estimates of the value of 1957 crops, based on average prices received by farmers during the crop year ending July 31, 1958, will be published in one of the regularly scheduled DBS crop reports and in the *Quarterly Bulletin of Agricultural Statistics*.

Stocks of Grain in Canada.—Table 14 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1951-56, with averages for the five-year periods 1935-39, 1940-44 and 1945-49. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

14.—Carryover of Canadian Grain as at July 31, 1952-56 and Five-Year Averages 1935-49

NOTE.—Figures for individual years before 1952 will be found in the corresponding table of previous editions of the Year Book.

As at July 31—	Total in Canada and United States	Total in Canada	In Commercial Storage in Canada	On Farms in Canada	Prairie Provinces

The Federal Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A statistical record is kept of these inspections and details are given in Table 17. Local wholesale butchering and slaughtering carried out by retail butchers and by farmers for their own use are not included. Actually the slaughtering and meat packing industry is concentrated into a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 17 are fairly inclusive. The slaughtering and meat packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XV of this volume. On a gross value basis it normally ranks among the three largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.

Wool.—Canada's wool requirements are largely met by imports which amounted to 58,226,000 lb. (greasy basis) in 1956 and 53,954,000 lb. in 1955. Exports amounted to 3,594,000 lb. in 1956 and 2,883,000 lb. in 1955. The apparent domestic consumption of wool shown in Table 18 is determined on the basis of production, exports and imports but does not take into consideration changes in stocks for which the data are not available. Differences in wool utilization between years are therefore probably less marked than indicated by these figures.

Subsection 5.—Dairying

Milk Production.—Milk production in 1956 amounted to 17,303,082,000 lb., an increase of 4,611,000 lb. over the previous year. The proportion of the total milk production used for factory-made dairy products decreased to 55.7 p.c. in 1956 from 57.1 p.c. in 1955. The proportion sold in fluid form was 32.3 p.c. in 1956 compared with 30.8 p.c. in 1955. Milk used for all purposes on farms (home consumed, manufactured and fed) was 12.0 p.c. in both years.

Butter, Cheese and Other Dairy Products.—Butter production in 1956 amounted to 323,680,000 lb., 15,297,000 lb. less than in 1955. Of the total, 303,248,000 lb. was creamery butter, 18,589,000 lb. dairy or farm-made butter and 1,843,000 lb. whey butter.

Factory cheese production in 1956 was estimated at 93,082,000 lb., an increase of 6.3 p.c. over the 1955 estimate but 55.1 p.c. below the peak production of 207,431,000 lb. in 1942. Exports of cheese, mostly cheddar, amounted to 12,217,000 lb. in 1956 and 13,739,000 lb. in 1955 as compared with 135,409,000 lb. in 1945.

The over-all production of concentrated milk products increased to its highest level in 1956. The production of ice cream during 1956 increased about 807,000 gal. over that of 1955.

Domestic Disappearance of Dairy Products.—The estimated consumption of fluid milk and cream, on a milk basis, amounted to 5,040,998,000 pt. in 1956, 201,725,000 pt. higher than the 1955 consumption. The daily average consumption per capita was 0.88 pt. The estimated consumption of milk and cream is given by province in Table 24 and the domestic disappearance of all dairy products in Table 25.

¹ Includes Newfoundland for all manufactured dairy products.² Includes malted milk, cream

powder and substandard products of a variable fat content, items that do not appear separately in this table.

³ Includes milk by-products items not separately listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein and powdered whey.⁴ Since the quantities used for human consumption and livestock feeding

cannot definitely be established, per capita figures include both.

⁵ Includes ice cream in terms of milk.

Subsection 6.—Poultry and Eggs

Statistics of production and consumption of poultry meat and eggs are given in Tables 26 to 28.

Subsection 7.—Fruit, Nursery Stock and Vegetables

Fruit.—Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Nova Scotia production is centred mainly in the Annapolis Valley and New Brunswick production in the St. John River Valley and Westmorland County. The fruit growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree-fruit culture. In most producing areas, particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit growing is either the principal or one of the most important forms of agriculture and is of paramount importance to the economy of those areas. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are largely limited to Ontario and British Columbia.

Strawberries are grown commercially in all provinces for which tree fruit statistics are prepared as well as in Prince Edward Island. However, this crop is produced over a somewhat wider area than are tree fruits. In Nova Scotia for example a considerable

volume of strawberries is grown in Colchester County and farther north as well as in the apple producing areas of the Annapolis Valley. In British Columbia most of the strawberries are grown in the Fraser Valley rather than in the predominantly tree-fruit producing area of the Okanagan Valley.

Raspberries are grown commercially in Nova Scotia, New Brunswick and Quebec but the bulk of the crop is produced in Ontario and British Columbia with the Fraser Valley of British Columbia being the most important single area in Canada.

Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and Quebec. This crop is indigenous to certain lands in these areas. Individuals who harvest the wild berries may undertake to burn the land from time to time for weed control and to effect pruning. Dusting is often carried out to control insects, and bees are sometimes introduced to secure better pollination. A large percentage of the crop is frozen and exported. Some blueberries are picked for sale in other provinces but no statistics are available. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported annually, with the United States as the most important export market for Canadian fruit. Import restrictions by the United Kingdom have greatly reduced exports of Canadian fruit to that market in recent years.

Canning and processing industries have developed in the fruit growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian grown fruit crops. Some canned fruits are exported.

Nursery Stock.—Statistics concerning the nursery industry in Canada for the year ended June 30, 1956, are presented in Tables 31 and 32. All nurseries were asked to report quantities sold of stock propagated or imported during this period. Stock purchased from other nurseries in Canada was excluded to prevent duplication. A total of 127 nurseries reported in 1956 as compared with 155 in 1955. Provincial distribution was as follows: Ontario 63, Quebec 29, British Columbia 20, Manitoba 7, Saskatchewan 2, Alberta 2 and the Maritime Provinces 4.

Vegetables.—Estimates of acreage and production of commercial vegetables in Canada are prepared for all provinces except Newfoundland, Prince Edward Island and Saskatchewan. The Province of Ontario is the largest producer followed by Quebec and British Columbia. A wide variety of crops is grown in these three provinces while a somewhat smaller range of crops is produced in the Maritimes and the Prairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important producing areas. The estimates in the following tables cover output of commercial growers only and do not include any acreages or production of vegetables grown for home use on farms or elsewhere. Except as otherwise provided for in footnotes, all statistics pertain to crops grown for the fresh market and for processing.

Subsection 8.—Special Crops

Tobacco.—The chief tobacco growing area of Canada is located in southern Ontario in the counties adjacent to Lake Erie. Most of the cigarette tobacco comes from this district. In Ontario in 1956, 111,400 acres of flue-cured or Bright Virginia type tobacco and 4,496 acres of Burley tobacco were harvested. These are the most important types grown in Canada though dark air-cured and fire-cured tobacco as well as cigar tobacco are grown on a limited scale. The only other important production comes from Quebec. In 1956, 6,139 acres of flue-cured tobacco, 3,235 acres of cigar tobacco and 1,917 acres of pipe tobacco were harvested in that Province.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, Canadian per capita consumption of cigarettes was 229, cigars 20, cut tobacco 1.3 lb., plug tobacco 1.1 lb. and snuff about 1.3 oz. By 1956 the annual per capita consumption of cigarettes had increased to 1,678, cigars had dropped to 15.9, cut tobacco went up to 1.6 lb. in 1954 but declined to 1.3 lb. in 1956 and plug tobacco declined considerably in 1956.

Sugar Beets and Beetroot Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production centres in the St. Hilaire area of the Eastern Townships, where operations started in 1944. The sugar beet industry of Ontario is largely confined to the southwestern section of the Province and factories are located at Wallaceburg and Chatham.

Processing of sugar beets in Manitoba began in 1940. In Alberta, where the industry has shown steady growth, sugar beets are produced under irrigation with yields averaging above those received in the other provinces.

Apiculture.—Honey is produced commercially in all provinces of Canada except Newfoundland, Ontario being the largest producer. There is a considerable movement of honey from the Prairie Provinces to other parts of Canada. In recent years exports have been small, the United States being the most important external market.

Honey statistics have been compiled on an all-Canada basis since 1924 and show that the largest recorded crop was in 1948 when 45,145,000 lb. were produced. Production in 1956 was 24,272,000 lb.

In order to facilitate storage, shipment and uniformity of quality, considerable quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces. Bees are kept in some of the fruit growing and greenhouse districts of the country chiefly for purposes of pollination.

Maple Sugar and Syrup.—Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and the United States as the centre of the maple products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped.

Much of the syrup sold in Canada is marketed in one gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

Fibre Flax.—The demand for fibre flax was heavy during World War II when exports increased to many times the prewar volume. After the War however exports of fibre flax to Canada's principal market, the United Kingdom, dropped sharply and acreage devoted to this crop decreased.

41.—Acreage, Yield and Value of Fibre Flax, Seed and Fibre, 1953-56 with Average for 1948-52

Subsection 9.—Prices of Agricultural Produce

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1954 certain points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1954, are final prices for all grains. Since Aug. 1, 1954, only initial prices are available for western wheat and only initial prices plus interim payments for western oats and barley. Any subsequent participation payments made on the 1954 crops will be added to the prices currently used and the index revised upward accordingly.

42.—Average Index Numbers of Farm Prices of Agricultural Products by Province 1945-54 and by Month 1955 and 1956

(1935-39=100)

NOTE.—A description of this index, its coverage and the methods used will be found in *DBS Quarterly Bulletin of Agricultural Statistics* for October-December 1946.

¹ Initial payments plus additional payments to producers. ² Based on cash closing prices, Winnipeg Grain Exchange. From Aug. 1, 1944 to Oct. 22, 1947 prices of oats and barley remained at or near the government-imposed ceiling prices. From Oct. 23, 1947 to July 31, 1949 open market trading again prevailed. Equalization payments to producers are included for the crop years 1944-45 to 1947-48, inclusive. ³ Average cash closing price, Winnipeg Grain Exchange, except where otherwise noted. ⁴ Fixed price to growers. ⁵ \$5 fixed price to growers plus 50 cents participation payment. ⁶ Winnipeg Grain Exchange renewed trading in flaxseed cash and futures on Aug. 16, 1948. The Canadian Wheat Board was authorized to buy all flaxseed offered to it during the 1948-49 crop year on the basis of \$1 per bushel for No. 1 C.W. in store Fort William-Port Arthur, Ont.

Subsection 10.—Food Consumption

Consumption of Major Foods.—A study of consumption of the major foods was undertaken during World War II by the Dominion Bureau of Statistics in recognition of the national and international significance of such information. Though data on total consumption of certain commodities such as wheat, alcoholic beverages, meats, etc., have been available for a considerable period, it was found necessary to establish a per capita level of consumption of a wide range of products on a comparable basis.

The figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations have been made at the retail stage of distribution, except for meats where the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reached the hands of the consumer. It should also be pointed out that there are minor inaccuracies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers were not available.

All basic foods have been classified under 13 main commodity groups. Totals for each group have been computed using common denominators for the group, for example: milk solids (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods have been included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 45 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1935-39 as an average for comparison with the years 1954, 1955 and 1956.

ANNUAL CONSUMPTION OF PRINCIPAL FOODS PER CAPITA, CANADA 1955

¹ Fluctuations in apparent per capita flour consumption are partly caused by unavailability of complete data on flour inventories in all positions. ² Includes soybean flour. ³ Exclusive of Newfoundland.

⁴ Breakdown according to current classification not available. ⁵ Includes process cheese. ⁶ Includes cream expressed as milk.

Disappearance of Meats and Lard.—Production of meats from slaughter in Canada, total supply, distribution and per capita consumption of meats and lard are shown in Table 46. All estimates are on a carcass weight basis except canned meats which are in terms of product.

¹ Included with beef.

² Not available; assume no change in stocks between beginning and end of period.

³ Includes commercial lard production and estimated lard equivalent of renderable pork fat available from all uninspected slaughter.

Section 5.—Agricultural Statistics of the Census*

Census of Agriculture statistics relating to farms, farm mechanization, electrification and area are included in this Section. No comparable data are available for Newfoundland for years previous to the 1951 Census.

For census purposes a farm is defined as a holding on which agricultural operations are carried out and which is three acres or more in size, or from one to three acres in size, and with an agricultural production in 1955 valued at \$250 or more. The holding may consist of a single tract of land or of a number of separate tracts held under the same or different tenures, and operated as a single unit. Where the farm was made up of several parts located in different municipalities, the 1956 Census reported the complete farm as one unit in the municipality where the headquarters was located. The same definition was used in the 1951 Census.

Number of Farms.—The number of farms in Canada at June 1, 1956, was 575,015, a decrease of 48,076 from the 623,091 farms recorded in the 1951 Census. As compared with 1951, all the provinces showed decreases in number of farms ranging from 5.8 p.c. in Alberta to 34.2 p.c. in Newfoundland. Decreases in the Atlantic Provinces, except Prince Edward Island, and in Quebec were above the national average of 7.7 p.c., while decreases in Prince Edward Island, Ontario and the Western Provinces were below it.

* Prepared in the Agriculture Section of the Census Division, Dominion Bureau of Statistics.

47.—Number of Farms by Province, Censuses of 1951 and 1956

Province or Territory	1951	1956	Percentage Change 1951-56

Farms Classified by Tenure.—The proportion of farms operated by the owner in Canada declined fractionally from 78.5 p.c. in 1951 to 78.0 p.c. in 1956. Decreases in the proportion of owner-operated farms in Prince Edward Island, Nova Scotia, Manitoba, Saskatchewan and Alberta more than offset increases in Newfoundland, Quebec, Ontario and British Columbia, while the proportion in New Brunswick remained unchanged.

The proportion of tenant-operated farms was lower in 1956 than in 1951 in each of the provinces except Prince Edward Island, the national average of 6.2 p.c. being lower than the 1951 average of 7.2 p.c. Saskatchewan had the highest proportion of tenant-operated farms with 13.0 p.c., followed by Alberta with 10.7 p.c. Newfoundland with 0.7 p.c., and Prince Edward Island, New Brunswick and Quebec with 1.0 p.c. had the lowest proportions.

Farms Classified by Size of Holding.—Although in 1956 only 3.7 p.c. of the farms in Canada were less than 10 acres in size, 48.2 p.c. in Newfoundland and 25.7 p.c. in British Columbia were in this size group. Only 2.5 p.c. of the total farms in the other provinces were under 10 acres in size. The largest percentage of farms in the Maritime Provinces, Quebec and Ontario were in the 70-to-239-acre size group, while in Manitoba, Saskatchewan and Alberta the 240-to-399-acre size group contained the largest percentage of farms. In British Columbia it was the 10-to-69-acre size group and in Newfoundland the 3-to-9-acre size group that had the largest proportions of farms.

Farms in Canada were generally larger in 1956 than in 1951. The average size of farm increased from 279.3 acres in 1951 to 302.5 acres in 1956. The number of farms 400 acres or more in size increased nearly 4 p.c., while the number of farms under 400 acres in size decreased over 10 p.c. In Canada, 21.4 p.c. of the farms were 400 acres or more in size, but it was only in the Prairie Provinces that these large farms formed a significant proportion of the total—in Saskatchewan 58.7 p.c., in Alberta 43.3 p.c., and in Manitoba 33.7 p.c. In the other provinces the proportion of farms with 400 or more acres ranged from less than 1 p.c. in Newfoundland and Prince Edward Island to 8.2 p.c. in British Columbia.

Economic Classification of Farms.—The Economics Division, Department of Agriculture, developed a classification of farms for the 1956 Census based on the productive capacity of farms as reflected in the inventory data shown by the Census. This classification differs from the 1951 Census economic classification of farms, which was based on income data as reported by the farm operators, and is not comparable.

For the 1956 Census, three classes of farms were delineated:—

COMMERCIAL CROP AND LIVESTOCK FARMS.—Farms having a potential production of \$1,200 or more (based on average production and price series) are classified as commercial crop and livestock farms. Commercial farms thus defined delineate that segment of the total number of farms on which the operators devoted most of their time to farming with a view to selling on the market. The selection of the \$1,200 benchmark is an arbitrary one but is believed to represent the lower limit of those farms which provide substantial employment to the operator. While an income of \$1,200 is clearly below desirable living standards it does represent a farm unit which has passed the subsistence stage.

INSTITUTIONAL FARMS, ETC.—This classification includes Indian reserve farms, experimental farms, community pastures, Hutterite colonies, and farms operated by penitentiaries, hospitals, etc.

OTHER FARMS.—This is a miscellaneous category including not only those units producing crops and livestock worth less than \$1,200 but also acreages devoted to greenhouses, nurseries, apiaries, forest products, fur production and goats.

Of the total farms in Canada, 454,078 or 79.0 p.c. were classified as commercial crop and livestock farms, the percentage ranging from 21.8 in Newfoundland to 95.6 in Saskatchewan.

Farm Areas.—The total area of occupied farm land in Canada was 0.1 p.c. less in 1956 than in 1951. Decreases in the Atlantic Provinces, Ontario, Quebec and British Columbia were slightly greater than increases in the Prairie Provinces.

The area of improved land increased by 3.6 p.c. in the five-year period, entirely accounted for by increases in the Prairie Provinces and British Columbia. Similarly, the increase of 1.2 p.c. in the total area under crops for Canada as a whole also took place in the Prairie Provinces and British Columbia.

The total area of owner-operated farm land decreased by 0.7 p.c. in 1956 as compared with 1951. Decreases in Eastern Canada and British Columbia more than offset increases in the Prairie Provinces. The largest percentage decrease in farm land owned by the operator was in New Brunswick with 13.7 p.c., followed closely by Newfoundland with 12.8 p.c., and Nova Scotia with 12.6 p.c. Saskatchewan recorded the largest increase (2.6 p.c.) in farm area owner-operated, with Alberta and Manitoba following.

The increase for Canada in the area rented by farm operators, which amounted to 1.7 p.c. during the 1951-56 period, was contributed by the Prairie Provinces and Prince Edward Island. Decreases in farm land rented ranged from 8.5 p.c. in British Columbia to 28.2 p.c. in New Brunswick and 57.5 p.c. in Newfoundland.

Farm Machinery.—The upward trend in the number of machines on farms in Canada continued through the 1951-56 period. For Canada as a whole, all types of machines included in the 1956 Census showed an increase in number and in farms reporting them.

Grain combines showed the greatest percentage increase, 51.3 p.c. more combines being reported on farms in 1956 than in 1951. Farmers in Prince Edward Island reported 13 times as many, in Nova Scotia five and a half times as many, in Quebec three and a half times as many, and in New Brunswick almost three times as many. Increases in Ontario, Manitoba, Saskatchewan, Alberta and British Columbia were close to the national average of 51.3 p.c. and ranged from 40.3 p.c. in Manitoba to 65.9 p.c. in Ontario. Saskatchewan showed the largest numerical increase of 18,864 combines, and together with Alberta contributed two-thirds of the total 1951-56 increase of 46,427 combines for Canada. The total number of farms reporting combines increased 50.5 p.c. to 130,384 farms. Close to 50 p.c. of the farms in the Prairie Provinces reported combines.

There has also been a considerable increase during the period in the number of motor trucks on farms in all provinces, the increases ranging from 17.3 p.c. in New Brunswick to 93.4 p.c. in Prince Edward Island. Prince Edward Island, Newfoundland, Quebec, Saskatchewan and Alberta reported increases above the national average of 41.3 p.c. The largest numerical increase was reported in Saskatchewan.

The number of automobiles on farms in Canada increased 6.8 p.c. during the period 1951-56, exceeding the 4.5 p.c. increase during the 1941-51 period. All provinces contributed, provincial increases ranging from 1.7 p.c. in Manitoba to 44.9 p.c. in Newfoundland; 330,436 Canadian farms or 57.5 p.c. of all farms reported at least one automobile. Ontario where 75.1 p.c. of the farms reported automobiles and Manitoba where 63.6 p.c. reported automobiles led the provinces in this respect.

Canadian farms reported 25 p.c. more tractors in 1956 than in 1951 and all provinces shared in the increase. Newfoundland had the largest percentage increase with 134.9 p.c. followed by Prince Edward Island with 74.4 p.c. Saskatchewan reported the lowest percentage increase of 13.8 p.c. More than two out of three farms in Canada reported one or more tractors in 1956.

The national average increase between 1951 and 1956 in the number of gasoline engines reported on farms was 36.5 p.c. Six provinces, Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia reported increases, with Saskatchewan's advance of 80.6 p.c. contributing two-thirds of the total increase. Decreases in four provinces ranged from 7.7 p.c. in Prince Edward Island and 30.0 p.c. in Quebec to 39.0 p.c. in Newfoundland and 39.4 p.c. in New Brunswick.

Farm Electrification.—Nearly three-quarters of the farms in Canada reported electric power in 1956. Provinces were divided into two distinct groups—above and below the national average of 73.5 p.c. In the first group were Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and British Columbia in which the percentage of farms reporting electric power ranged from 81.9 p.c. in British Columbia to 89.1 p.c. in Ontario. The second group included Newfoundland, Prince Edward Island, Saskatchewan and Alberta where the percentages ranged from 39.7 p.c. in Prince Edward Island to 51.5 p.c. in Alberta.

Power line was reported to be the source of power on over 95 p.c. of the farms reporting electricity for Canada and for all provinces except Saskatchewan and Alberta. In Saskatchewan, 79.5 p.c. of the farms reporting electricity reported power line source, 7.8 p.c. wind electric and 12.8 p.c. other sources. In Alberta, 87.6 p.c. of the farms reporting electricity reported power line source, 3.2 p.c. wind electric and 9.4 p.c. other sources.

Section 6.—International Crop Statistics

Tables 54 and 55 are based on estimates published in October and November 1957 by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1955 and 1956 with averages for the years 1950-54 in the leading countries of the world.

54.—Estimated Acreages and Production of Wheat Harvested in 1955 and 1956 in Specified Countries with Average for 1950-54

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Land is one of the bases of the Canadian economy and wise use of the land is the foundation of good forestry. In addition to providing the greatest amount of the most usable woods as economically as possible, good forestry aids in maintaining agricultural lands against drought and erosion; continuously protects water-catchment areas and assures supplies of water; furnishes cover for game and fur-bearing animals; and gives opportunity for recreation which only the forests can provide.

Section 1.—Forest Regions†

The forests of Canada cover a vast area in the north temperate climatic zone. Wide variations in physiographic, soil and climatic conditions cause marked differences in the character of the forests in different parts of the country; hence eight fairly well defined forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:—

Region	Percentage of Forested Area	Region	Percentage of Forested Area
Boreal.....	82.1	Acadian.....	2.0
Great Lakes-St. Lawrence.....	6.5	Columbia.....	0.8
Subalpine.....	3.7	Deciduous.....	0.4
Montane.....	2.3		
Coast.....	2.2	TOTAL.....	100.0

Boreal Forest Region.—The Boreal Region comprises the greater part of the forested area of Canada, forming a continuous belt from the Atlantic Ocean westward to the Rocky Mountains and northward to Alaska. The white and the black spruces are characteristic tree species; other prominent conifers are tamarack, which ranges throughout the region, balsam fir and jack pine in the eastern and central portions, and alpine fir and

* Sections of this Chapter that deal with forestry and the federal forestry program were revised in the Forest Economics Section, Forestry Branch, Department of Northern Affairs and National Resources. Provincial forestry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industries, except as otherwise noted, have been revised in the Forestry Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

† A more detailed discussion of forest regions is given in Bulletin No. 89, *A Forest Classification for Canada* by W. E. D. Halliday, a publication of the Forestry Branch, Department of Northern Affairs and National Resources, Ottawa. Accounts of variations in Canadian physiography, climate, etc., are given in Chapter I of this volume.

lodgepole pine in the western and northwestern parts. Although the region is primarily coniferous there is a general admixture of broadleaved trees such as the white birches and the poplars; these are important in the central and south-central portions, particularly where the region grades into the Grassland Formation of the prairies. In turn the proportion of barrens (non-forested rock, muskeg and tundra) increases in the northern parts until the region finally merges into the Tundra Formation. In the southern parts of the eastern portions of the region there is considerable intrusion of species from the Great Lakes-St. Lawrence Forest Region, such as the white and the red pines, yellow birch, sugar maple, black ash and eastern white cedar.

Subalpine Forest Region.—Coniferous forest found on the higher slopes of the mountains east of the Coast Ranges in British Columbia is known as the Subalpine Region. It extends northward to the divide between the drainage of the Skeena, Nass and Peace Rivers and that of the Stikine and Liard Rivers. The characteristic species are Engelmann spruce, alpine fir and lodgepole pine. There is a close relationship with the Boreal Region, from which the black and the white spruces and aspen intrude, more particularly in the northern parts. There is also some entry of Douglas fir from the Montane Forest, as well as western hemlock, western red cedar and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine and limber pine.

Montane Forest Region.—This region occupies a large part of the interior uplands of British Columbia, part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States, and comes in contact with the Coast, Columbia and Subalpine Forests. Ponderosa pine is a characteristic species of the southern portions, to which it is restricted. Douglas fir is found throughout but more particularly in the central and southern parts. Lodgepole pine and aspen are generally present, the latter being well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region become important constituents in the northern parts, together with white birch. The Boreal white spruce also enters here. Extensive bunch grass and sage brush communities of the Grassland Formation are found in many of the river valleys.

Coast Forest Region.—This is part of the Pacific Coast forest of North America. Essentially coniferous, the Coast Region consists principally of western red cedar and western hemlock, with Douglas fir in the south and Sitka spruce in the north. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common towards the timberline. Western white pine is found in the southern parts. Broadleaved trees such as black cottonwood, red alder and broadleaf maple have a limited distribution in this region. Arbutus and garry oak occur in Canada only on the southeast coast of Vancouver Island and the adjacent mainland. These are species that have entered from the Montane Forest in the United States.

Columbia Forest Region.—A large part of the Kootenay River valley, the upper valleys of the Thompson and Fraser Rivers, and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species of this Columbia Region. Associated with these are Douglas fir, which is of general distribution, and, in the southern parts, western white pine, western larch and grand fir. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the region. Towards lower elevations in the west and in parts of the Kootenay Valley, the forest grades into the Montane Region and in a few places into the Grassland Formation.

Deciduous Forest Region.—A small portion of this forest, widespread in the eastern United States, is found in southwestern Ontario between Lakes Huron, Erie and Ontario. Here with the broadleaved trees common to the Great Lakes-St. Lawrence Forest Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky

coffee-tree, redbud, black gum, blue ash, sassafras, mockernut and pignut hickories, and scarlet, black and pin oaks. Black walnut, sycamore and swamp white oak also are largely confined to this region. Conifers are few, mainly scattered white pine, tamarack, red juniper and hemlock.

Great Lakes-St. Lawrence Forest Region.—Along the Great Lakes and the St. Lawrence River valley is a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch with certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar, the largetooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplar and white birch, intrude from the north, and in the east, red spruce from the Acadian Forest becomes abundant in certain portions.

Acadian Forest Region.—The greater part of the Maritime Provinces contains a forest closely related to both the Great Lakes-St. Lawrence and the Boreal Regions. The characteristic species is red spruce, with which are associated balsam fir, yellow birch and sugar maple, with some red pine, white pine, beech and hemlock. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar and jack pine, however, are restricted almost entirely to the western half of the region.

Section 2.—Native Tree Species

There are more than 150 tree species in Canada of which 31 are conifers, commonly called 'softwoods'. About two-thirds of these softwoods and about 10 p.c. of the large number of deciduous or 'hardwood' species are of commercial importance. About 82 p.c. of the volume of merchantable timber is made up of softwood species.

The dominant species existing in each forest region are given in Section 1. Detailed information is contained in Forestry Branch Bulletin No. 61, *Native Trees of Canada*,* published by the Department of Northern Affairs and National Resources.

Section 3.—Forest Resources

The forested area of Canada is estimated at 1,621,045 sq. miles or 46 p.c. of the total land area.

Approximately 782,000 sq. miles or 48 p.c. of the total forested area of Canada is classified as non-productive, i.e., incapable of producing crops of merchantable wood. However, these forests do provide valuable protection for drainage basins and shelter for game and fur-bearing animals.

Of the productive portion of the forested area, 642,000 sq. miles are considered to be now accessible for commercial operations. The potentially accessible productive forests contain much valuable timber suitable for lumber and pulpwood. At present it is not economical to conduct cutting operations on these areas but, as low-cost methods of transportation are developed, as accessible forested areas become depleted, and as the demand for wood products increases, these potentially accessible productive forests will be brought progressively into commercial development. Because of less favourable climatic conditions the productive capacity of these timberlands is expected to be lower than that of the accessible areas now being logged.

The predominant part played by the lumber and other forest products industries in the development of Canada has resulted in a widespread tendency to evaluate the forest in terms of timber alone. A growing realization of the economic importance of the non-timber values, however, is bringing about increasing recognition of the true value of the forests and is thus developing a broader concept of forestry.

* Obtainable from the Queen's Printer, Ottawa, price \$1.50.

Inventories of forest resources are made periodically by provincial forest authorities and, with their co-operation, the Forestry Branch of the Department of Northern Affairs and National Resources compiles the National Forest Inventory. The latest estimates of the total stand of timber, by province and region, appear in Table 1. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

¹ Cubic volumes do not include wood in stumps and unusable tops.

Forest Land Tenure.—Private individuals or corporations own 5 p.c. of the total forest land of Canada and the remaining 95 p.c. is still in the possession of the Crown in the right of the Federal or the Provincial Governments. Rights to cut Crown timber under lease or licence have been granted on 11 p.c. of the total forest land. Some of the unalienated land has already been logged and has reverted to the Crown but it is mainly located in the less accessible areas.

Farm woodlots on the 623,000 farms across Canada cover about 22,780,000 acres (Census of 1951)—13 p.c. of the total farm area and over 6 p.c. of the total accessible productive forest. These small wooded tracts ranging in size from three or four acres to 200 or more acres are among the most accessible forests in Canada. Further, the woodlots of Eastern Canada are in general highly productive because they lie in the southern parts of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

Section 4.—Forest Depletion

A general account of forest depletion and increment together with statistics of forest fires and fire losses is presented in this Section. Details of the scientific control of those influences that account for wastage, such as forest fires, insect pests, etc., are dealt with in Section 5.

The average annual rate and cause of depletion of reserves of merchantable timber during the ten years 1945-54, together with preliminary data for 1955, are given in Table 3. Of the total depletion of the forests in the ten-year period, 94 p.c. was utilized and 6 p.c. was destroyed by fire. The utilization of 3,023,922,000 cu. feet comprised 45 p.c. logs and bolts, 38 p.c. pulpwood, 14 p.c. fuelwood, and the remaining 3 p.c. miscellaneous products. Approximately 6 p.c. of the total utilization was exported in the form of logs and bolts and pulpwood.

The more efficient utilization of cut timber is an important factor related to forest depletion, for there is little doubt that in the past too high a percentage of the sawn log was discarded. Changes of great significance have been taking place in the uses of wood, permitting the utilization of sizes, qualities and species previously considered unmerchantable. The development and the manufacture of rayon, cellophane and numerous other products in the cellulose industry is rapidly extending the use of wood. The increasing demand for plastic-wood products, fibre board and laminated wood is resulting in greater use of inferior classes of wood and therefore in the more complete utilization of forest resources and the elimination of much waste.

The accessible portion of the productive forests of Canada, covering an area of 642,000 sq. miles, constitute the reserve from which forest production will be obtained for many years to come. The supply of merchantable timber on this area is estimated to be 363,265,000,000 cu. feet, of which approximately 153,300,000,000 cu. feet are located on that portion of the area at present under lease or private ownership. The utilization in 1955 of 3,280,000,000 cu. feet represents 0.9 p.c. of the accessible productive volume, and 2.1 p.c. of the merchantable volume on the occupied areas (where the utilization is actually taking place). These percentages show that cutting is concentrated in the occupied areas and the wood that grows on the unoccupied areas is not as yet being used. This situation emphasizes the necessity for the orderly management of all commercial forests if the forest industries are to maintain their dominant position in the development of the natural resources of Canada.

¹ Does not include wastage caused by agencies other than fire, such as insects, disease and natural mortality, for which no reliable estimates are available.

Forest Fire Statistics.—During 1955 there were 6,360 forest fires in Canada (exclusive of 156 within the Yukon and Northwest Territories) compared with 3,022 in 1954 and an annual average of 5,141 for the period 1945-54. In 1954 only about 266,000 acres were damaged compared with over 1,379,000 in 1955. However, the 1955 area burned was almost identical to the average for the previous decade while the size of the average fire was lower. Costs of fire fighting are more indicative of the difference in severity of the two fire seasons—a little less than \$1,000,000 in 1954 and more than \$6,500,000 in 1955. The average of similar costs for the period 1945-54 was about \$2,000,000. About 30 p.c. of all forest fires in 1955 were caused by lightning.

Section 5.—Forest Administration, Conservation and Research

Subsection 1.—Federal Forestry Program

Administration.—The Federal Government is responsible for the protection and administration of the forest resources of the Yukon and Northwest Territories and of other federal lands such as the National Parks, forest experiment stations, military areas and Indian reserves. The Federal Government also administers the Canada Forestry Act which provides, among other things, authority for the operation of forest experiment stations and forest products laboratories.

The Act also authorizes the granting of federal assistance to the provinces to enable them to improve the management of their own forests. Under the Federal-Provincial Agreements signed under authority of the Act, seven of Canada's ten provinces have undertaken a forest inventory with federal financial assistance, and six provinces have reforestation agreements. The history of the Federal-Provincial Agreements and their relation to the Canada Forestry Act is described in a special article appearing in the 1956 Year Book, pp. 459-466. In 1957 the Federal Government broadened the implementation of the Canada Forestry Act by providing financial assistance to the provinces for forest fire protection. A total of \$5,000,000 is to be made available for this purpose during the next five years. Federal contributions will be applicable to capital expenditures, such as the cost of fire protection equipment and improvements, and of forest access roads, trails and buildings required for forest fire protection.

The Forestry Branch of the Department of Northern Affairs and National Resources has been continuing work on the aerial forest mapping of federally administered lands and other territories. For example, forest inventory maps were prepared from air photographs for portions of the Yukon and Northwest Territories and data were collected on the ground to support the interpretation of the photographs. The development of instrumental aids in forest photography and in interpretation is being continued by this Branch.

Forestry Research.—In the field of forestry the chief responsibility of the Federal Government is to carry out research in problems affecting the forests of Canada and their development, conservation and more effective utilization. To this end forest research and forest products research facilities have been expanded greatly throughout Canada during the past five years. The Forestry Branch of the Federal Department of Northern Affairs and National Resources conducts research in forest economics, silviculture, management, forest inventory methods, forest fire protection and in forest products. An extensive program of research is under way on the government experiment stations and on other lands, where an increasing proportion of the total effort is being expended in co-operation with provincial authorities and industry.

Research in silviculture and management has been concentrated on problems of regeneration, on growth and stand development, and on harvest cutting methods. A regeneration survey extending from the Rocky Mountains to the Atlantic Coast has provided information on the state of regeneration on cut-over and burned lands. This has been followed by intensive work of a more fundamental nature to assess the factors responsible for the success or failure of regeneration and tests of practical cutting methods, seed-bed treatments, and seeding and planting methods. Studies are made of the growth, yield and successional changes in the most important forest types. Systems of classifying forest sites are being devised to assess their effective growth, development and long-term productivity. Research in tree breeding is being carried on for artificial propagation by selection and development of superior strains. In forest management, research is concerned with the application of silviculture, regulation of cut, and protection in order to maintain forests at the highest production levels. Many of the studies in silviculture and forest management are conducted co-operatively with provincial forest services and wood-using industries.

Forest fire protection is a vital problem and is therefore a major concern of federal authorities. In forest fire research the Federal Forestry Branch is working towards full co-operation with the provincial forest services in achieving the best methods of forest fire protection. The leading contributions of the Branch have been in the field of fire danger measurement and in the development of equipment and techniques for fire fighting. Some of the more important studies being undertaken at present include the development of fuel-type classification methods and mapping techniques, the development of a method for rating fire season severity and fire protection organization efficiency, and the testing of fire-suppression equipment, such as back-pack tanks and hose.

Research in forest inventory methods is of increasing importance because of the greatly expanded inventory programs being conducted in most provinces. Data from air photographs are correlated with field work to develop new techniques of timber estimating, which is being facilitated by the use of stand volume tables. Various methods of field sampling are being investigated and compared. Research is continuing in methods for measuring tree images and tree shadows to determine heights, crown widths, canopy density and other data from photographs taken in different seasons of the year under various conditions. The use of large-scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types. Construction of suitable photogrammetric and other scientific apparatus includes those required by the forestry tricamera method of air photography which has been developed to provide maximum forestry information at minimum cost, and the shadow height calculator, which facilitates the determination of tree heights from shadows in air photographs.

Research in forest economics is concentrated on problems associated with the production of wood in the forest, land use, land tenure, taxation, forest legislation and administrative techniques, forest, management, forest labour and the valuation of forest lands. Economics research also involves continued study of the broad developments in forest industries. Further information on research is given in a special article on The Forest Products Laboratories of Canada in the 1955 Year Book, pp. 455-461.

Subsection 2.—Provincial Forestry Programs

All forested land in provincial territory, with the exception of the minor portions in National Parks, forest experiment stations, military areas and Indian reserves (*see* Table 2, p. 19), is administered by the respective provincial governments. The forestry program of each province is outlined below.

Newfoundland.—Of the estimated 30,505 sq. miles of productive forests in Newfoundland, 12,758 sq. miles lie on the Island and the remainder in Labrador. Most of Labrador's forests are leased but as yet virtually untouched although there is enough timber for the establishment of several large paper mills. Because of this lack of development the area is supervised by one Forest Inspector and a Forest Warden.

On the Island 63 p.c. of the forested area, mostly in the interior, is owned by, or leased to, two large paper companies. Of the remainder, 32 p.c. is unoccupied Crown land and 5 p.c. private holdings. A belt of coastal timber about three miles wide is retained to supply domestic firewood and construction material and each household has the right to cut 2,000 cu. feet of such wood each year. In most districts this form of cutting is done without restrictions but a policy is now being introduced whereby cutting in certain management areas will be controlled by forest officers.

Commercial timber cutting on unoccupied Crown lands has been by permit since 1952; for amounts up to 120 cords per person permits are issued by the field staff but for larger quantities permits must be approved by the Lieutenant-Governor in Council. The number of large permits varies from 10 to 25 each year and usually cover stands damaged by gales, fire or insects. Unoccupied Crown land is divided into 21 Forest Inspector Districts of varying size, averaging 281 sq. miles. The Island is also divided into three Forest Regions each with a Supervisor who is in charge of Inspectors and is responsible to the Minister of Mines and Resources and the Forestry headquarters staff.

Fire prevention is difficult because of a lack of roads into the remote forests. Twenty well-equipped forest fire depots are scattered along the coast, most of them equipped with radio telephone. Twelve lookout towers, ten of which are equipped with radiotelephone, cover a large portion of the forested area. One aircraft, stationed at Gander throughout the fire season, patrols isolated forests and transports fire fighting equipment and crews when necessary. The total forest fire staff, including permanent Inspectors and others, is approximately 90. The two paper companies maintain their own fire protection organization.

The Newfoundland Royal Commission on Forestry, appointed in 1954, recommended development of the pulp and paper industry; completion of a forest inventory; establishment of forest protection administration; and organization of a forest service.

Forest research for Newfoundland is performed by the Forestry Branch of the Federal Department of Northern Affairs and National Resources but very little reforestation is done, as yet.

Prince Edward Island.—The Forestry Division of Prince Edward Island, formed under the Department of Industry and Natural Resources in 1951, became part of the Department of Agriculture in 1955.

Almost all of Prince Edward Island's woodland is privately owned, so that the Forestry Division is mainly concerned with planting, woodlot management and fire protection. A small nursery has been established jointly with the Federal Government to deal with the Island's needs and many people take advantage of seedlings, supplied by this Division at reasonable cost, to restock barren areas. The Federal Government pays half the cost of reforesting waste lands.

In proportion to its size, Prince Edward Island exports a great deal of pulpwood. This export, combined with the fuelwood and lumber cut each year, led the Forestry Division to inaugurate a woodlot management program which is designed to educate the owner in the proper care and management of his woodlot.

Fire protection does not constitute too great a problem. Wooded areas are scattered in patches throughout the Province and since a network of roads makes all woodlots accessible, equipment can be brought to the scene of a fire quickly and easily.

Research is limited mainly to reforestation problems and these are studied in the provincial nursery.

Nova Scotia.—Forest administration in Nova Scotia is conducted by the Department of Lands and Forests which, in conjunction with the forest industry and the public, tries to protect and rejuvenate provincial forests. The Department employs 20 trained foresters, one wildlife biologist and an entomologist in addition to a large staff of rangers, surveyors and fieldmen.

Of the Province's 20,743 sq. miles, about 11,555 are classed as forested. The Crown holds title to about one-quarter of this total; one-third is in holdings of 1,000 acres or more owned by about 200 companies and individual land owners; one-thirtieth is in the form of National Parks and Indian reserves; and the remainder is composed of small woodlots which for the most part are owned by farmers.

Considerable effort is expended on conservation projects, forest protection and research. Reforestation has been practised and encouraged since 1926. Large quantities of seedlings are planted each year on Crown lands and distributed to companies and individuals for private reforestation. In addition, a restriction is placed on cutting coniferous trees of a diameter of less than ten inches through the stump. The careful maintenance of many farm woodlots has resulted in a continuing source of income to rural families and has helped to retain forest cover. To establish an inventory of forest resources, the Province has conducted an aerial and ground assessment to determine tree species and land productivity.

As a deterrent to wasteful procedures, Crown lands are no longer leased for timber cutting over long periods; instead, harvesting rights on approved areas are sold by tender and restrictions placed on cutting at that time. Provincial roads are being built into these areas making them accessible for management, harvesting and fire protection.

Fire fighting costs and damage to forests have in recent years averaged \$150,000 annually. In an effort to reduce this damage, the Province operates 17 fire ranger towers; five are operated by private companies and two by the Federal Government. An aerial patrol supplements these tower stations and three stand-by fire fighting crews are maintained in addition to regular fire ranger establishments in each county of the Province. Fire fighters are well equipped with portable tools, jeeps, trucks and bulldozers. Radio contact between ground, aircraft and automobile stations provides efficient relay during the fire season.

Forest research in Nova Scotia is conducted by services of the Federal Government and the Nova Scotia Research Foundation. Investigations are being made with a view to improving stand conditions and methods of cutting and processing so as to yield a better product and better returns. Efforts are being made to hasten the development of more valuable species on land now covered with poor quality hardwood and on developing better quality softwoods. A study of production costs is expected to reveal, and eventually reduce, the hidden costs of the industry. Other projects include research on regeneration, tree diseases, insects and tree physiology.

The greatest field of endeavour in forest preservation is to educate the public to appreciate the value of forest wealth. Each of the 14 district offices promotes this ideal by means of speeches to organized bodies, motion pictures, exhibits, bulletins and leaflets.

New Brunswick.—More than 80 p.c. of the area of New Brunswick is classed as productive forest of which the Crown, in right of the Province, owns about half. About 2 p.c. is owned by the Federal Government and the remainder is privately owned. A provincial inventory, part of the national forest inventory, was begun in 1951 and the results, to be published in 1958, will indicate the nature and extent of the forests of the Province. The New Brunswick Forest Development Commission, which has been studying methods of forest administration, will present its report late in 1957.

Protection from forest fires, the first requirement for forest conservation, is mainly the responsibility of the Forest Service which also carries out duties in connection with game protection, colonization and the administration of provincial Crown lands. A large-scale aerial spraying program to protect balsam fir and spruce from the spruce budworm has been carried on since 1952 by a Crown company sponsored by the Federal and Provincial Governments and representatives of the forest products industries.

Timber licences issued by the Province authorize operators to cut and remove forest products in accordance with forest management plans and cutting permits. Stumpage dues are paid to the Province when products are cut by the licensees.

New Brunswick does not maintain a provincial forest research organization. There is, however, extensive co-operation between the Province and the Federal Forestry Branch in conducting forest research. The University of New Brunswick also has undertaken a small number of forest research projects in co-operation with the National Research Council, the Provincial Government, and other interested institutions.

Quebec.—The commercial forests of the Province of Quebec cover an area of 220,772 sq. miles extending from its southern borders to latitude 52° north, between the frontier of Labrador in the east, and the Eastmain River Basin in the west. Of this total 25,704 sq. miles are privately owned, 296 sq. miles are federal Crown forests and the remainder is provincial Crown land. Approximately 134,000 sq. miles of the latter are vacant lands. Of the 1,000,000,000 cu. feet cut in the forests of Quebec in 1955-56, privately owned forests accounted for about two-fifths.

The limits reserved for forest industries are administered by the Department of Lands and Forests and the technical work such as inventory, reforestation, superintendence of cutting, control of culling, verification of plans for development, collecting of stumpage dues, etc., is the responsibility of the Forestry Service. These limits are either leased by auction after public notice has been given, or assigned under a special law. The price of the licence is fixed by auction or by Order in Council subsequent to specific legislation. The Government reserves the right to dispose of the water powers situated on the limits leased.

A tree-felling permit, which is valid for one year, is renewable if the holder has complied with the conditions imposed; it may be transferred with the authorization of the Minister of Lands and Forests. The lessee of a limit must pay a ground rent in addition to the price of licence and must forward, three months before the cutting begins, a plan of the operations. Wood cut must be measured by a licensed culler and at the end of the operations the limit-holder must produce a sworn statement of quantities cut.

The Forest Service endeavours to promote the use of silvicultural methods among the owners of wooded farm lots and small forest areas.

Quebec's forest protective system comprises three organizations: the Protective Service, the protective associations and the non-affiliated lease holders or owners. The Protective Service is a government body established within the Department of Lands and Forests in 1924 to enforce legislation and regulations governing forest fire protection and to protect vacant Crown lands, township reserves and colonization territories.

The protective associations, of which there are six, are syndicates of lease holders and owners who have availed themselves of their right to form an association to satisfy the law which compels them to protect their limits or private forests of 2,000 acres or over. Members assume operating expenses in proportion to the area owned by each but the Department assumes half the costs of fire fighting incurred by the associations.

The third group is composed of lease holders and of owners who prefer to discharge their obligations personally as far as forest protection is concerned. They enjoy the same privileges and their obligations are the same as those imposed upon the associations.

To perpetuate the forestry program of the Province, the Department has established a number of nurseries, the first at Berthierville in 1908. This nursery has three sections: one wooded with a variety of valuable species of mature age, one serving agricultural purposes, and another devoted to forestry experiments and the cultivation of trees for reforestation or ornamentation.

More recently the Grandes Piles nursery and the Gaspé nursery were organized and nurseries in the following counties: Abitibi-East, Témiscamingue, Saguenay, Îles-de-la-Madeleine, Rimouski, Roberval, Rivière-du-Loup, Témiscouata and Chicoutimi. Their object is the preparation of plants for reforesting nearby districts. 'Floating' nurseries supervised by the engineers of the Forestry Information Bureau and intended especially for growing reforestation plants for private properties, are located at Pont-Rouge, Sherbrooke, Scott, St. Hyacinthe, Victoriaville and Mont-Joli. The plants are supplied free of charge on request. A dynamic reforestation program is now under way in the Province, with an ultimate objective of 10,000,000 plants yearly on private grounds.

The Bureau of Silviculture and Botany, and the Forestry Products Laboratory, both subsidized by the Department, are actively engaged in scientific research work in the forestry field. The Bureau studies the possibilities of utilizing spoil-heaps of gold and asbestos mines, tests the fertility of soils in the spruce groves, classifies forests according to type of vegetation, and studies growth and yields of stands in the timber limits by means of permanent research spots. The Forestry Products Laboratory, located at the Duchesnay Forestry Station, examines developments in the field of chemical conversion of wood and in the use of forestry by-products.

Ontario.—Provincial policy is directed toward the management and protection of timber lands and stabilization of the forest industry. There are 123 management units, of which 36 are large timber licences and those licensees with holdings of more than 50 sq. miles must submit management plans and inventories for their areas. Smaller management areas are integrated into 'public' working circles.

Timber cutting rights are offered for sale with priority being given to the needs of established industries. When a management plan is approved, the licensee provides a plan covering proposed operations for the ensuing year and, additionally, the Minister may require that adequate provisions be made for effective reforestation of licensed areas.

In co-operation with the Federal Government the Province has undertaken an inventory of forest resources. Field work which started in 1946 has been completed and only the final compiling and publication of reports covering Lake Simcoe, Lake Huron and Lake Erie districts remain to be done. These reports cover the agricultural area woodlots of southern Ontario and are important because farm woodlots have a little-realized capacity. For instance, in the Lake Simcoe district alone there were, in 1956, 603 factories manufacturing wood products with a selling value of \$90,000,000 and employing 9,300 persons with earnings of almost \$26,000,000. Other predominantly agricultural districts have timber resources of equal value.

An extensive reforestation program is gaining momentum each year. In 1956 almost 30,000,000 trees were planted, of which 13,000,000 were placed on Crown lands, 4,000,000 on lands managed by counties, townships and conservation authorities, and the remainder distributed to private landowners. Provincial forestry officials plan to increase the scope of reforestation each year until 100,000,000 trees are planted annually. To achieve this objective, tree nursery facilities have been extended. Four established nurseries have been enlarged and five new nurseries organized.

In addition to the reforestation and regeneration of barren lands, the forest production and maintenance program includes measures to combat damage by fire, insects and disease. To fight fire the Forest Protection Division has an efficient staff well supplied with modern equipment. Over 300 lookout towers supplemented by aerial patrols and an extensive communication system guard against forest fires. During 1956, a moderate year, there were 1,017 forest fires which destroyed \$2,870,000 of merchantable timber on Crown lands alone. The cost of fighting these fires was over \$1,175,000. Despite a growing public awareness of fire hazards in the forest, over 700 of the fires were caused by human carelessness.

The Division of Research, as a result of constant study of the factors affecting regeneration of the commercially important tree species, has achieved noteworthy results. Silvicultural treatment of yellow birch has improved germination, survival and height growth. In the white pine program, a new method of grafting has been successful, and an improved method of raising aspen seedlings has been found. Advances have also been evident in soil research and general forest genetics as well as in the development of new fire fighting techniques.

Manitoba.—The forests of Manitoba are administered by the Forest Service, a Branch of the Department of Mines and Natural Resources. The Service is headed by a Provincial Forester and the Province is divided into four Forest Districts—Northern, Southern, Eastern, and Western—each with a District Forester in charge. The Whiteshell Forest Reserve, which is an important recreational area, is also supervised by a Forester. Each Forest District is subdivided into Forest Ranger Districts of which there are 40, each in charge of a Forest Ranger.

The cutting of mature timber is governed by timber sale, licensed timber berth, pulpwood lease, or timber permit. Timber sales are disposed of by public auction and cover periods of from one to seven years. Timber berths cover certain areas granted before 1930, the date of the transfer of the natural resources from the Federal Government to the Province. Pulpwood leases are granted over an area of 2,748 sq. miles. Timber permits are granted to settlers and small operators at regulation rates for a period of one year or less.

An inventory of the forest resources of the Province was completed in 1956 as part of the conservation plan. On the basis of this inventory and other information, working plans with annual allowable cuts on a sustained-yield basis have been brought into operation in the more accessible areas.

Fire protection, as another part of the conservation plan, is one of the most important activities of the Forest Service. Fires are detected by air patrol, lookout tower and road patrol and rapid communication is maintained within the Service by radio and telephone. The Air Service also transports men and equipment to fires in areas beyond the reach of roads. While the main air base is at Lac du Bonnet, summer air bases are maintained at The Pas, Norway House, and Thicket Portage. The total area under fire protection is about 97,000 sq. miles.

Regeneration of the forest is mainly dependent on natural means although 2,800,000 trees were planted during the past five years as part of the Federal-Provincial Agreement. The Pineland Forest Nursery is operated at a point near Hadashville to supply planting stock for denuded areas of Crown land and to furnish farmers with shelterbelt and woodlot seedlings.

The Province has no forestry research organization but co-operates with several Federal services which maintain two research areas.

Saskatchewan.—The forest area in Saskatchewan, excluding water, is 120,345 sq. miles or 54.7 p.c. of the land area of the Province. The provincial forests, which account for 92 p.c. of the total forest land, are administered by the Forestry Branch of the Department of Natural Resources under the Forest Act of 1931. It is the responsibility of the Forestry Branch to devise policy that will regulate all phases of forest activity so that the people of Saskatchewan may benefit from this resource in perpetuity. Cutting timber on Crown land is the exclusive right of a Crown corporation. The annual cut in each region is limited to 5 p.c. of the estimated stand of merchantable spruce.

The policy determined by the five divisions of the Forestry Branch—Administration, Inventory, Management, Silviculture and Research—is carried out on a regional basis under the supervision of a regional superintendent who is directly responsible to the Regional Administration Branch of the Department of Natural Resources. This Branch implements the policies conceived by program branches such as the Forestry Branch. It is, however, the responsibility of the Forestry Branch to provide liaison between the Administration and the regions for implementation of new forest practices and procedures and to assess their results.

The Department of Natural Resources Conservation Branch distributes information covering all aspects of the Department's resources management programs. A large part of the Branch's work, particularly during the summer, is devoted to publicizing the activities of the Province's forest management program. The Conservation Branch operates film and lecture tours, distributes pamphlets and provides training and assistance for field staff to make everyone aware of the great value of the provincial forests and of the need for their wise use and protection.

The detection, suppression and prevention of forest fires is the responsibility of the Fire Control Division of the Regional Administration Branch of the Department. The Division maintains a network of 80 lookout towers equipped with two-way radios. In periods of high hazard, four aircraft are kept on constant patrol over areas not under tower surveillance.

To aid conservation, the great expanse of forest area has been divided into smaller, more accessible units and a system of roads and fireguards has been developed. This facilitates movement of fire fighting personnel and allows the caching of fire fighting tools at strategic locations in the forests as well as at conservation officers' headquarters. Stand-by crews are ready to move quickly and heavy equipment is available when needed. Saskatchewan has taken an interesting step in the field of fire suppression by establishing a 'smokejumper' organization. This group of 16 fire fighters, organized in 1948, is maintained primarily to parachute on fires in remote areas and to combat the blaze until other personnel can reach it.

The Department of Natural Resources, although it does not maintain a staff of forest biologists, co-operates fully with Federal authorities in investigating and controlling forest damage resulting from insects and disease.

A new research division has been organized to investigate various subjects and to establish new procedures and policies regarding forest practices. The Division is currently conducting cull studies in pulpwood stands, black and white spruce regeneration studies, and the assessment of results obtained from the mechanical thinning of jack pine stands.

Alberta.—The 151,278 sq. miles of provincial forests are administered by the Forests and Wildlife Division of the Department of Lands and Forests in Edmonton. The Division is composed of five forestry Branches under a Director of Forestry: Administration, Forest Protection, Forest Management, Forest Surveys, and Radio. A sixth Branch deals with fish and game regulations.

The Administration Branch supervises all branches, maintaining general control over revenue and expenditures, and dealing with personnel. It conducts a Forestry Training School which offers in-service training for Forest Officers and other employees.

Protection of the forests is the charge of the Forest Protection Branch and all field personnel. For ease of administration, the forested area has been divided into seven Divisions, each responsible for the forest within its boundary. These Divisions are in turn composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his divisional superintendent. The divisional staffs include an assistant superintendent, chief ranger, radio operator and seasonal help such as lookout-men, stand-by fire fighting crews and labourers. These employees are responsible for fire prevention, detection and suppression as well as the supervision of logging and milling operations, timber cruising, and construction and maintenance of forestry projects.

Timber matters are dealt with by the Forest Management Branch. These include setting the standard of timber utilization, supervising the cruising and selling of timber, setting and supervising methods of cutting, ensuring efficient operation of mills, collection of Crown dues, and implementation of forest management plans. Much of the field work in connection with these duties is accomplished through the divisional staffs.

The Forest Surveys Branch is the technical forestry branch whose main charges include forest management planning, the forest inventory, and forest cover map-making for timber sale and fire damage evaluation purposes. Temporary cutting control plans have been completed for those areas south of the 57th parallel, and management plans are being prepared for the Slave Lake region. All timber will eventually be disposed of according to management plan under a system of sustained yield.

Development and maintenance of communications is the function of the Radio Branch. Central stations are maintained at Edmonton and Calgary with smaller stations located at divisional headquarters, lookout towers and Ranger Districts.

Conservation of 9,000 sq. miles of forest comprising the Rocky Mountains Forest Reserve is administered by a joint provincial-federal agency, the Eastern Rockies Forest Conservation Board with offices in Calgary. The area is composed of three 'forests' which are subdivided into Ranger Districts. The Superintendent in charge of each forest is responsible to the administrative officer in Calgary whose decisions are based on policies formed by the Board which comprises one federal and two provincial members. This Reserve is important as it includes the headwaters of the main prairie river system.

Research in general is carried out by the Forestry Branch of the Federal Department of Northern Affairs and National Resources (which maintains the Kananaskis Experiment Station) and by the Science Service of the Federal Department of Agriculture.

British Columbia.—The productive forest land of British Columbia in 1956 was inventoried at 123,176 sq. miles and in addition there were 18,538 sq. miles of forest land classed as "not satisfactorily restocked". Immature timber occurred on 59,848 sq. miles and 63,328 sq. miles carried matured timber with a total volume of 133,000,000,000 cu. feet.

Of the 123,176 sq. miles, 113,836 are owned by the Province, 8,563 are under private ownership and 777 sq. miles belong to the Government of Canada in National Parks and other tenures.

For administrative purposes, the Province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson. Further decentralization of authority is effected by subdivision of the Forest Districts into Ranger Districts. There are approximately 25 Ranger Districts in each Forest District. Twelve directional, servicing, or policy-forming divisions constitute the head office of the Forest Service in Victoria.

Vigorous efforts are being made to bring British Columbia's forest resources under sustained-yield management and the forest industries are making definite progress toward total utilization of their raw materials. The problem is urgent despite the fact that, with a present annual cut of approximately 1,100,000,000 cu. feet, the total inventory would appear sufficient to support present needs in perpetuity. Over half of the present cut comes from the Coast (Wet Belt) forests which also comprise the majority of the 12,321 sq. miles privately owned, leased or licensed. This area is being overcut at the present time, whereas large areas of northern forest land remain untouched.

Several systems of timber disposal are in effect. The most publicized is the Forest Management Licence which constitutes a contract between the Government and a company or individual whereby the latter agrees to manage, protect, and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area in perpetuity. Provincial Forests, Public Working Circles, and Sustained Yield Units are the governmental equivalent of the Management Licence with the timber, when it is ready for cutting, being disposed of by public auction. Management, silviculture, road-building and protection on such areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and Timber Sales.

Protection of the forest, particularly from fire, is still a major problem although the public is becoming more cautious. Improved fire fighting techniques, the use of aircraft for patrol and transportation, employment of helicopters, and a gradually expanding system of lookouts are steadily cutting down fire losses. Close liaison with the Science Service of the Federal Department of Agriculture, which maintains laboratories in Vernon and Victoria, provides information about insect and fungal enemies of the forest.

British Columbia's present research policy is to establish regional centres in association with District Headquarters. Close association is maintained with the District Forester and his staff although the regional research centres are supervised directly from Victoria. Since each Forest District is mainly concerned with one of the major forest regions characterizing the Province, the regional research program within a District gives priority to studies in forest types dominant in that Forest District.

The policy of the Research Division is to undertake investigations as required by the British Columbia Forest Service in its administration and management of the forest resources of the Province. More specifically, the research policy may be briefly defined as follows:—

(1) Investigation of silvicultural problems arising from the utilization of forest resources. These existing problems are recognized in specific forest types or regions and are a cause of present concern.

(2) Studies in anticipation of silvicultural problems, or in anticipation of a demand for specific silvicultural information, the need for which can be predicted from the general trend of intensive forest practice, and which require long-term investigations.

(3) Short-term investigations, generally of an expedient nature, dealing with silvicultural or management problems, for other Forest Service divisions or districts.

(4) Sustained studies for other Forest Service divisions in fields other than silviculture.

(5) Demonstration on a practical scale of the application of research findings for the benefit of government, industrial and private foresters, such demonstrations to be on experiment stations or other Crown lands reserved for the purpose.

The British Columbia Research Council has performed some short-range studies of specific problems, as has the University of British Columbia.

Section 6.—Forest and Allied Industries

This Section is concerned with the many industries employed in the felling of timber in the forest and its transformation into the numerous utilitarian shapes and forms required in modern living. The basic industries provide the raw material for sawmills, pulp and paper mills and for a wide range of secondary industries that convert the products of the basic industries into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture, and a vast range of industries using wood in any form in their processes. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of the export trade of Canada and thereby provide the exchange necessary to pay for a large share of the imports purchased from other countries, particularly the United States.

Subsection 1.—Woods Operations

In connection with operations in the woods the forests provide not only the raw materials for the sawmills, pulp mills, veneer mills, wood distillation, excelsior and other plants, but also the logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products that are finished in the woods ready for use or export. A number of minor forest products help swell the total, such as Christmas trees, cascara bark, balsam gum, resin, etc.

It has been estimated that operations in the woods during the logging season in 1955 gave employment amounting to 149,300 man-years and distributed \$506,000,000 in wages and salaries.

Estimates of woods operations are now calculated on an entirely new basis, and previous annual estimates have been revised as far back as 1940. The former method used the formula 'Consumption plus Exports minus Imports equals *apparent* Production' for both volume and value of each class of primary forest products. The new method attempts to give *actual* production figures for all items and is based chiefly on provincial Forest Service data for volume. Value, as presently estimated, excludes transportation costs, which formed a large part of the consumption values utilized in former calculations.

7.—Value of Woods Operations by Product 1951-55

NOTE.—The figures in this table have been calculated on a new basis and are not comparable with those published in the corresponding table of previous Year Books (*see* text above).

¹ In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the British Columbia coastal region is 175 and for the remainder of Canada 200. Other factors: pulpwood 85, fuelwood and wood for distillation 80, poles and piling 15, round mining timber 95, hewn railway ties 5, fence posts 1.2 and fence rails 1.

² Converted to rough cords and included with pulpwood.

³ Chiefly Christmas trees but also includes balsam gum, cascara bark, etc.

9.—Equivalent Volume of Solid Wood Cut and Value of Products of Woods Operations by Province 1953-55

NOTE.—The figures in this table have been calculated on a new basis and are not comparable with those published in the corresponding table of previous issues of the Year Book (see text on p. 480).

¹ Includes value of forest products other than wood.

Subsection 2.—The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood, reports of which were compiled for 1955, was 7,333 as compared with 7,696 in 1954. Mills sawing less than 15,000 ft. b.m. are excluded but account for less than one-half of one per cent of the total lumber production. Employees numbered 58,586 and wages and salaries amounted to \$152,556,819. Logs, bolts and other materials and supplies of the industry were valued at \$338,870,204, the gross value of production was \$644,482,990 and net value \$296,940,188.

Lumber production in Canada reached its maximum in 1955 at 7,920,033,000 ft. b.m. Average values were fairly uniform until 1916 but increased rapidly from 1917 to 1920 to decline gradually during the following years to the lowest level for the entire period in 1933. With the exception of 1938 and 1949 increases in average value took place each year from 1933 to 1951; decreases of 2.8 p.c., 4.7 p.c. and 1.5 p.c. occurred in 1952, 1953 and 1954, followed by an increase of 2.6 p.c. in 1955.

Lumber Exports.—Exports of planks, boards and square timber are given in Chapter XXII, Foreign Trade.

Subsection 3.—The Pulp and Paper Industry

The manufacture of pulp and paper has been the leading industry in Canada for many years and the postwar development of the industry has more than kept pace with the vast industrial growth of the nation. Pulp and paper stands first among all industries in value of production, in exports, in total wages paid and in capital invested. It is the largest consumer of electric energy and the largest industrial buyer of goods and services, including transportation, in the land. The industry has a newsprint output about four times that of any other country and provides over 50 p.c. of the world's newsprint needs. Canada is one of the world's greatest woodpulp exporters and stands second only to the United States as a producer of pulp. Thus, this Canadian industry, with 80 p.c. of its output moving abroad, ranks as one of the major industrial enterprises of the world.

There are three classes of mills in the industry. In 1956, 31 were making pulp only, 25 were making paper only and 70 were combined pulp and paper mills.

The industry includes three forms of industrial activity: operations in the woods with pulpwood as a product, the manufacture of pulp, and the manufacture of paper. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a portion of

their spruce and balsam logs to pulp mills. Less than 12 p.c. of the pulpwood cut in Canada is exported in raw or unmanufactured form and a large portion of such exports is cut from private lands.

13.—Production, Consumption, Exports and Imports of Pulpwood 1940-55

NOTE.—Table compiled on a new basis; figures not comparable with those published in the corresponding table of previous Year Books.

¹ Given in terms of rough or unpeeled wood.

² Newfoundland included from 1949.

Pulp Production.—The manufacture of pulp, the second stage in this industry, is carried on by mills producing pulp only and also by paper manufacturers operating pulp mills in conjunction with paper mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp mill, but there are also a number of cutting-up and rossing mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for export. Pulpwood is measured by the cord (4' by 4' by 8' of piled material). One cord of rough pulpwood contains approximately 85 cu. feet of solid wood, and one cord of peeled pulpwood 95 cu. feet.

Of the total 1956 pulp production, 85 p.c. was made in combined pulp and paper mills by companies manufacturing paper. The remainder was made for sale in Canada or for export by mills making pulp only. Over 53 p.c. was groundwood pulp and over 17 p.c. unbleached sulphite fibre, these being the principal components of newsprint paper. Bleached sulphite, bleached, semi-bleached and unbleached sulphate, soda fibre, semi-chemical, other grades and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of 10,733,744 tons of pulp produced in 1956 entailed the use of 14,031,855 cords of rough pulpwood valued at \$369,263,045 and the equivalent of 936,370 rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butts, cores, etc.) valued at \$18,882,759. The total value of materials used in the manufacture of pulp was \$464,347,142.

Pulp Exports.—The chief market for Canadian newsprint and pulp is the United States. Prior to World War II this market alone absorbed about 85 p.c. of the pulp exports and 80 p.c. of the newsprint exports. In 1945 the proportions were 76 p.c. and 83 p.c. respectively and in 1956, 81 p.c. and 87 p.c.

¹ Newfoundland included from 1949.

World Newsprint Statistics.—Since 1913 Canada has led the world in the export of newsprint. Figures for the leading producing countries for the two latest years available are given in Table 21; 1939 figures are included for comparative purposes. The six countries listed accounted for 76 p.c. of the estimated world production in 1956, Canada contributing about 50 p.c.

Statistics of the Combined Pulp and Paper Industries.*—The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into stationery and other highly processed paper products are often combined in one plant. This conversion of paper within the pulp and paper industry represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

* See Chapter XV for further particulars regarding the pulp and paper and paper-converting industries.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are attributed to the particular industrial group of converting plants to which they properly belong. Including manufacturing operations as far as the basic paper-making stage there were altogether 125 mills in operation in 1955—the same number as in 1954. The employees numbered 62,205 and their salaries and wages amounted to \$265,298,119, as against \$252,598,383 the previous year. If the pulp made for their own use in combined pulp and paper mills is disregarded the total value of materials and supplies used in the industry as a whole can be considered as amounting to \$546,079,192 in 1955, \$515,257,595 in 1954 and \$499,350,994 in 1953; the gross value of production as \$1,326,938,138 in 1955, \$1,241,558,451 in 1954 and \$1,179,665,443 in 1953 and net valuation of production \$689,818,173 in 1955, \$641,517,070 in 1954 and \$599,934,934 in 1953.

The pulp and paper industry is one of the leading single manufacturing industries in Canada. In 1955 as in 1954 it was first in net value of production, in gross value of production, in employment and in salaries and wages paid. The manufacturing stages only of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. In world trade, pulp and paper are generally Canada's main commodities—newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity.* The United States market absorbs annually over 83 p.c. of all pulpwood exports and over 84 p.c. of the pulp and the paper shipments of Canada. About 50 p.c. of the paper consumed in the United States is either of Canadian manufacture or is made from wood or pulp imported from Canada.

THE PULP AND PAPER RESEARCH INSTITUTE OF CANADA†

The Pulp and Paper Research Institute of Canada is a centre of research and learning, concerned with virtually every aspect of the production and use of pulp and paper products and with the training of McGill postgraduate students in fundamental research fields of interest to the pulp and paper industry. The Institute staff carries out applied research in the fields of woodlands operations and pulp and paper mill operations, and fundamental research in support of these fields; the graduate students work towards master's and doctorate degrees in physical chemistry, wood chemistry, chemical and mechanical engineering.

Facilities, therefore, include laboratories for pulp and paper testing and for chemical, physical, radio-chemical, chemical engineering and mechanical engineering research including hydraulics; a pilot plant for chemical pulping, pulp and chip refining, and waste liquor pyrolysis; a library on pulp and paper and related subjects; photographic and microscopic services; and a woodlands research department. At present the Institute has a permanent staff of about 160.

Established in 1913 as a branch of the Dominion Forest Products Laboratories, the Institute was re-organized in 1927 under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government, and McGill University. Since then the Institute has occupied a building erected by the pulp and paper industry, but an additional building of modern design is being constructed at Pointe Claire on the western outskirts of Montreal by the Government of Canada in lieu of its annual financial grants. It will cost \$2,225,000 and will house Institute staff and facilities at present scattered about the McGill campus in temporary quarters. One wing of the building will contain laboratories typical of a college chemistry building, another will provide laboratories for engineering research, and a third will provide for administrative offices.

* For reasons given in Section I, Part II of the Foreign Trade Chapter, gold is excluded from Canadian trade statistics.

† Prepared by Mr. Rielle Thomson, Information Manager, Canadian Pulp and Paper Association, Montreal, Que.

The Institute's research activities comprise a basic program, contract research, and technical services. The basic program is supported by assessments from the Maintaining Membership (some 40 companies, representing more than 100 mills and about 90 p.e. of the total production of the Canadian industry), by a basic grant from the Canadian Pulp and Paper Association, and by appropriations from McGill University (primarily for student work). It comprises research of interest to the industry broadly, as distinct from that which is the concern only of a single company or a small segment of the industry.

The projects in the basic program range from studies of the growing seedling in the forest to the converted pulp and paper product. The emphasis is, however, primarily on fundamental and exploratory studies. The Institute is regarded as a centre for broad, long-range and uninterrupted studies of basic principles which individual pulp and paper companies would find difficult to justify in terms of immediate applied objectives. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not be in a position to keep occupied on a continuous basis.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 25 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their thesis topics. The head of the Institute's Wood Chemistry Division, who is also E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made—cellulose, lignin, resins, sugars, and other carbohydrates. The head of the Institute's Physical Chemistry Division, also a Research Associate in the McGill Chemistry Department, directs graduate student work in the physical chemistry of fibres, e.g., the forces which cause cellulose fibres in a water suspension to mat together to form paper. The head of the Institute's Chemical Engineering Division, also Associate Professor of Chemical Engineering at McGill, directs graduate students in such chemical and mechanical studies as the friction losses occurring when pulp flows through pipelines.

In addition to its basic program of research, the Institute undertakes contract research projects for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment, and the current project investigating the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which supplies bibliographies, abstracts, translations, and critical reviews to the scientific staff and the industry.

In addition to its own program, the Institute co-operates with outside agencies in special projects. It maintains close liaison with the National Research Council and, in the past, has carried out joint projects with the Applied Chemistry Division and other Divisions of that organization. At present the Institute is engaged in a practical study of spruce regeneration in mixed wood stands, co-operating with two pulp and paper companies, a research foundation, and federal and provincial government departments.

Some of the major projects in the Institute's basic program are briefly outlined in the following paragraphs.

Woodlands Research.—Institute research in this field includes silvicultural studies of forest regeneration, such as forest seeding and planting techniques and the use of growth stimulants, biological studies of insect control, and engineering studies of wood harvesting methods. A major part of woodlands research is in this latter field such as the project on full-tree logging, a method which involves felling and transporting the whole tree from the stump to a central point where it is processed to pulpwood, and where by-products from bark and slash may be made. The basic study of the forces involved in pulpwood

holding grounds will make possible accurate engineering design of the component structures. This project has already developed much of the information required for transverse holding grounds, and is proceeding to the study of parallel holding grounds.

Mechanical Pulping.—A process consisting of grinding wood at low energy and subsequently refining the rejects is being studied as a possible way of reducing energy consumption and improving the products. A basic study of grinding is under way to determine the fundamentals governing the mechanical separation of paper-making fibres from the parent wood. This may lead to a new or improved process for producing mechanical pulp.

Chemical Pulping.—Of particular importance to the field of resources conservation is the Institute's development work in high-yield pulping processes aimed at recovering the greatest possible weight of usable wood fibres from each unit of wood. Experiments on the use of hardwoods in paper-making, to supplement or to supplant the traditional softwoods, are being made. A major change in pulp and paper technology, in which the Institute is providing basic data, concerns new methods of chemical pulping that will permit continuous rather than batch processing.

Paper-Making Studies.—Studies of paper formation, and investigations on the influence of fibre properties on the initial strength development of paper webs, are being carried out. The effect of fibre flocculation on the behaviour of fibre suspensions and the uniformity of paper is being studied to elucidate the mechanism involved in the aggregation of fibres under paper-making conditions.

Process Control.—The Institute carries out research on improving production control and product quality which involves modifying existing control methods and developing new ones. Related to this has been the development of new instruments, among which have been the *Canadian Standard Freeness Tester*, the *PAPRIC Electronic Dirt Counter*, the *Johnson Fibre Classifier*, the *Chapman Smoothness Tester* and the *Reference Electrode* for the continuous measurement of the actual *pH* at the high temperatures and pressures existing inside the pulping digester. At present, a recording flow instrument is being developed for rapid and continuous measurement of lignin concentration in cooking liquors by ultra violet absorption.

Waste Utilization.—The disposal, and if possible the utilization, of all types of waste from the industry—bark, liquor, slash, etc.—has been a major concern of this Institute since its inception. One of the most promising new developments in this line is the *Atomized Suspension Technique*. Solutions or slurries to be treated are atomized into the top of a tower with heated walls, thus creating a finely divided suspension of droplets in their own vapour, which evaporates to dryness and can then be subjected to pyrolysis or other chemical reactions within the same tower. The application of this technique has already been successfully tested on the small pilot-plant scale in the recovery of chemicals and heat from kraft, soda, neutral sodium semi-chemical and acid sodium sulphite spent liquors, and it has also been tested on other mill wastes, ore slurries, fine chemicals, and mineral solutions. It is expected that ultimately the Institute-developed equipment will be widely used in processing not only industrial but also sanitary wastes, which will assist in reducing the contamination and pollution of the nation's waterways. Plans are already being carried forward to test this last application on the pilot-plant scale.

Subsection 4.—The Veneer and Plywood Industries*

The production of hardwood plywood in Canada is confined largely to the eastern provinces. Changes in manufacturing methods applied to hardwood plywood resulted in its adaptation to many uses, particularly to attractive wall finishes for homes and other buildings, flush doors, radio and television cabinets and other home and office furniture.

* Prepared by the Forest Products Laboratories, Forestry Branch, Department of Northern Affairs and National Resources, Ottawa.

Wood is used indirectly in the manufacture of all-metal products such as wooden patterns and wooden foundry boxes in making metal castings. Wood in the form of barrels, boxes and other containers also enters into the distribution of commodities of all kinds.

In 1955 the wood-using group, comprising 4,471 establishments, gave employment to 75,087 persons and paid out \$201,883,078 in salaries and wages. The gross value of its products was \$730,860,564 and the net value \$334,917,793.

The importance of secondary industry in providing employment will be appreciated when it is noted that the number of employees in the wood-using group was more than 75,000, as compared with sawmills with approximately 58,000 employees and pulp and paper with about 62,000 in 1955.

Subsection 6.—The Paper-Using Industries

The paper-using group comprises three industries* engaged primarily in manufacturing commodities of paper and paperboard. Establishments engaged in printing, publishing, bookbinding and the allied graphic arts also consume large quantities of these materials but under the standard industrial classification adopted by the Dominion Bureau of Statistics in 1948 they are grouped separately.

Some paper-using establishments purchase paper as a raw material from the pulp and paper industry and merely subject it to some form of treatment to fit it for further manufacture in some other industry. This occurs in the manufacture of coated, sensitized or corrugated paper. Other firms purchase paper and subject it to some treatment to fit it for a definite final use such as in the manufacture of asphalt roofing or waxed wrapping paper. Another large group uses paper and paperboard as a raw material for conversion into paper bags, boxes, envelopes, laminated wallboard and other commodities.

The manufacture of containers and packages of various kinds has grown very rapidly since ways have been found of converting tough and cheap paper stocks into strongly made boxes which compete very favourably with the wooden crates and packing cases used formerly. Small attractive paper containers for use in the retail trade are growing in favour and constitute an important branch of the paper-using industries.

Composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and in some cases coated with a mineral surfacing, is being increasingly used as a substitute for metal roofing, wooden shingles and siding materials. Wood-fibre building boards, some of which are produced by lamination in the paper-using industries, are now used extensively in construction, especially for insulating purposes, replacing lumber and wood lath.

* Paper boxes and paper bags; roofing paper; miscellaneous paper goods.

The growth of the paper-using industries in Canada since 1923 reflects these developments. In 1923 the 152 establishments in this group employed 6,870 persons, distributed \$7,442,102 in salaries and wages and produced goods valued at \$31,760,948. In 1955 these industries comprised 455 plants, provided employment for 27,545 persons whose earnings totalled \$84,478,930 and produced products worth \$427,160,367.

Subsection 7.—Printing, Publishing and Allied Industries

The printing trades group is made up of five closely related industries: printing and publishing, comprised of publishers who operate printing plants; printing and bookbinding, including general or commercial printers and bookbinders; lithographing, comprised of plants specializing in that process; engraving, stereotyping and electrotyping, including photo-engraving; and trade composition or typesetting for printers. A sixth industry covering publishers of periodicals who do not print their own publications has been included since 1949. Although strictly speaking these publishers are not manufacturers, they are closely related to the printing trades which produce the plates, cuts, etc., and print newspapers, magazines, directories, yearbooks, almanacs, house organs and other periodicals for them.

In 1955 the manufacturing printing trades employed 64,025 persons whose earnings totalled \$222,206,780. Their output was valued at \$562,538,358 and the raw materials used and services received cost \$172,832,967.

Periodicals valued at \$236,928,550 accounted for about 42 p.c. of the value of printed matter and other products, daily newspapers alone contributing \$170,656,504. The value of periodicals is made up of \$174,704,296 received from advertising and \$62,224,254 received from subscriptions and sales of publications. In addition, the 1,617 publishers in the sixth industry reported revenues of \$34,072,222 from advertising and \$11,173,763 from sales of publications.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Canada's Mineral Industry 1956-57*

Canada's thriving mineral industry reached its greatest rate of expansion in 1956, the most prosperous year in the industry's history. During the period under review, January 1956 to the end of June 1957, mineral development activity was centred mainly on a tremendous program of mine development and of plant construction. While the full impact of the resulting expansion in productive capacity remained to be felt, the program added greatly to the industry's economic status in 1956. The value of mineral output rose 15 p.c. over 1955 to a new high of \$2,068,000,000 or 7 p.c. of the value of Canada's gross national product for that year. A major contributor to Canada's export trade, the industry vied with forestry for top place in value of production exported. Foreign sales of primary ores, metals and minerals reached a value of \$1,300,000,000 and made up nearly 30 p.c. of the country's exports of all commodities. Crude petroleum exports exceeded \$100,000,000, three times that of 1955 while exports of iron ore rose 45 p.c. to \$144,443,000; developments under way in the non-ferrous base-metal field will make large new supplies of these metals available for export.

Of much significance to Canada's economic growth have been the rapid proving-up and development of its great wealth of iron ore and of its energy resources of crude petroleum, natural gas, and uranium. Crude petroleum production rose to a record 170,570,000 bbl. in 1956 and the first western Canadian oil reached Toronto markets with the extension of the Interprovincial pipeline from Sarnia to that area. Natural gas from the rich Fort St. John area of northeastern British Columbia will flow into southern British Columbia markets and into the United States to add millions to the value of Canada's export trade with the completion in 1957 of the \$152,000,000, 650-mile Westcoast Transmission natural gas pipeline. Eastern Canada is scheduled to be served with western Canadian gas for

* Except where otherwise indicated, this review was prepared under the direction of Dr. Marc Boyer, Deputy Minister of the Department of Mines and Technical Surveys, by Mary J. Giroux of the Department's Editorial and Information Staff.

industrial and domestic use late in 1958 by the Trans-Canada pipeline now under construction. Canada has a new major source of export revenue in its uranium industry, headed as it is toward an output value rate of well over \$300,000,000 annually by 1958. It has another major source of export dollars in its huge tonnages of low-grade iron ores which are attracting the attention of United States and European steel interests.

The high rate of mineral development activity continued throughout 1956. Early in 1957, however, a slackening in demand for metals and minerals resulted in a weakening in price structures particularly of copper, lead and zinc. This became more evident as the year progressed and production of these metals in 1957 was expected to be at lower levels than in 1956. Nickel markets remained firm, however, despite the action of the United States in releasing stockpile quotas for civilian use. Premium price markets disappeared and nickel sold at the standard price set by The International Nickel Company of Canada Limited—70 cents (Canadian) a pound.

While immediate prospects for copper, lead and zinc and some of the other metals and minerals were rather uncertain at the end of the review period, the long-term outlook for the industry as a whole appeared favourable. There was little doubt that the momentum of growth that had been set up within the industry by the expenditure of huge capital sums on the large-scale development of mineral resources would support continued prosperity in the immediate future, and that, in the long-term view, the increasing demand for metals and minerals, generated both at home and abroad by increases in population and steadily rising living standards, would ensure the industry's prosperity in years to come.

Subsection 1.—The Metals

The tremendous growth of the mineral industry was evident in every phase of endeavour but was greatest in metal mining where capital outlays amounting to hundreds of millions of dollars were made to increase productive capacity, particularly of copper, nickel, uranium and iron ore. In the Blind River uranium area, some \$300,000,000 to \$350,000,000 was spent from 1953 to mid-1957 on preproduction development alone. During the review period, the most significant event was the announcement by International Nickel to proceed with the development of its huge nickel deposits in the Mystery Lake-Moak Lake area of northern Manitoba. Meanwhile, widespread exploratory activity resulted in new claim-staking records in British Columbia, Manitoba and Quebec and a number of important finds were made ranging from lead and zinc in Yukon to nickel in Ungava.

The value of metal production in 1956 rose to a record \$1,134,354,000, a 13-p.c. increase over 1955 and 9 p.c. greater than the total value of Canada's mineral output in 1950. Under the stimulus of high prices, copper production increased to 706,586,000 lb., 8 p.c. higher than in 1955 and than the previous record established in 1940. Iron ore jumped 38 p.c. to 20,113,000 long tons and nickel 2 p.c. to 355,986,000 lb. Gold, lead and zinc showed declines in output, gold decreasing 4 p.c. below 1955 to 4,379,000 oz. t., lead 8 p.c. to 373,350,000 lb., and zinc 2 p.c. to 847,240,000 lb. In value, copper was up \$52,000,000, iron ore \$46,000,000, uranium \$14,000,000, and nickel and zinc, each \$7,000,000.

Several important developments during the review period served to underline the great growth potential of the industry. The signing of contracts by Eldorado Mining and Refining Limited, the Crown purchasing agent, with 18 uranium companies covering the sale of over \$1,500,000,000 worth of uranium precipitates by Mar. 31, 1963, is expected to give Canada 24 operating uranium concentration plants, handling about 45,000 tons of ore daily by 1958. The continued expansion of the country's nickel-producing capacity and International Nickel's development of its Mystery Lake-Moak Lake nickel project indicate a nickel production for Canada of some 470,000,000 lb. by 1961, 20,000,000 lb. greater than the 1956 world production (exclusive of Soviet countries). The great growth in iron ore production from high-grade properties coupled with Canada's possession of huge tonnages of ores amenable to beneficiation have already raised Canada to sixth place in world production and point to an output of between 45,000,000 tons and 60,000,000 tons by 1965.

Exports of the four principal non-ferrous base metals in all forms continued to go mainly to United States and were valued at \$537,686,829 in 1956, a \$39,560,000 increase over the previous year. Exports, in primary forms, of copper increased from 194,764 tons in 1955 to 215,837 tons in 1956 and of nickel from 173,880 tons to 176,838 tons, but exports of lead decreased from 150,867 tons in 1955 to 129,607 tons in 1956, and of zinc from 404,422 tons to 383,041 tons. The United States bought, in primary forms, 30 p.c. more copper in 1956 than in the previous year, 3 p.c. more zinc, 3 p.c. less nickel and 30 p.c. less lead. The United Kingdom bought, in primary forms, 7 p.c. less copper, 12 p.c. less lead, 32 p.c. less zinc and about the same amount of nickel.

Base metal prices were generally high in January 1956 and, with the exception of copper, remained fairly steady throughout the year. During the first half of 1957, however, a slackening in demand led to a decline in prices and in June 1957, at the end of the period under review, the prices of copper, lead and zinc in particular had fallen off considerably. Copper showed the greatest fluctuation, rising from 43 cents a pound in January 1956 to 46 cents a pound in February 1956 then declining to 45.375 cents in June and to 35 cents in October 1956, closing the year at 34.750 cents a pound. In 1957 it dropped steadily to 27.88 cents by the end of June that year. Zinc remained at 13.50 cents a pound throughout 1956 and until May 1957 when it dropped to 11.50 cents a pound and then to 10.50 cents a pound at the end of June 1957. Lead was 15.62 cents a pound in January 1956 and 15.50 cents a pound during the remainder of 1956. In January 1957 it dropped to 15.25 cents a pound, remaining there until May when it dropped again to 14.75 cents a pound and to 13.25 cents a pound at the end of June 1957. Nickel was 63 cents (Canadian) a pound in 1956 until December when it was raised to 70 cents a pound.

The decline in prices was followed by a drop in the production of several of the metals. During the first six months of 1957, copper decreased 4 p.c. in volume of output below that of the same period in 1956 to 335,688,000 lb.; lead, 2 p.c. to 182,878,000 lb.; and zinc, 9 p.c. to 391,618,000 lb. Nickel, however, rose 6 p.c. to 190,732,000 lb. and iron ore 3 p.c. to 5,837,000 long tons.

Accounts of developments in metal mining on a regional basis follow.

British Columbia.—Canada's major source of lead and zinc, British Columbia draws around 56 p.c. of the total value of its mineral production from these two metals. Output comes mainly from the famous Sullivan mine of The Consolidated Mining and Smelting Company of Canada Limited at Kimberley, the largest lead-zinc-silver mine in the world. The Province's metal production also comprises copper, silver, gold, tungsten concentrates, and iron ore, in order of value, and minor amounts of antimony, bismuth, cadmium, indium and tin. British Columbia ranks fourth among the provinces and territories in value of mineral production and is the only Canadian source of antimony, indium and tin.

Highlights of the period under review were: the expenditure of large capital sums on the development of the natural gas and crude petroleum industries in the northeastern part of the Province; the exploration for and development of copper properties in various areas, and an unequalled amount of exploratory activity for new sources of mineral wealth.

Of much significance to the future development of British Columbia's metal-mining industry and to the Province's whole industrial potential were the continued disclosure of great quantities of natural gas, the discovery in commercial quantities of crude petroleum in the Peace River area, and the outstanding progress made toward marketing this gas in southern British Columbia and in the United States. (Developments in natural gas and crude petroleum in the Province are described in a separate article on p. 510.)

Higher average prices for lead and zinc contributed greatly to the record value of \$199,318,000 of the Province's mineral output in 1956, a 5-p.c. increase over the record set in the previous year. Zinc output increased from 431,772,000 lb. valued at \$58,937,000 in 1955 to 443,711,000 lb. valued at \$65,714,000 in 1956 while lead declined from 322,985,000 lb. valued at \$46,445,000 to 290,277,000 lb. worth \$45,022,000. Consolidated Mining and Smelting produced 386,082,000 lb. of zinc, a record for the second successive year, and 298,524,000 lb. of lead. Concentrates came from the Company's four mines—the Sullivan, the H.B. near Salmo, the Bluebell at Riondel and the Tulsequah Chief in northern British

Columbia—and were treated in Company plants at Trail with custom ores and concentrates from other properties in the Province, from Yukon and from foreign shippers. Consolidated Mining and Smelting operates Canada's only lead smelter and one of its two zinc plants, the other being that of Hudson Bay Mining and Smelting Company Limited near Flin Flon in Manitoba. Other lead and zinc producers in British Columbia in 1956 included Giant Mascot Mines Limited, Canadian Exploration Limited, a subsidiary of Placer Development Limited, Reeves Macdonald Mines Limited, Sheep Creek Mines Limited, and Silbak Premier Mines Limited.

During the first six months of 1957, the Province's output of lead showed a slight increase over that of the same period in 1956 while its zinc production decreased 4 p.c. Consolidated Mining and Smelting closed its Sullivan open-pit mine in June 1957 and announced intentions of ceasing operations at Tulsequah Chief mine. Giant Mascot Mines stopped production in June because of the exhaustion of ore reserves.

The rise in the price of copper during 1955 and early 1956 resulted in a widespread search for new deposits and the development of several properties, ranging from potentially small to large-scale producers. British Columbia's copper output declined 4 p.c. in volume below 1955 but increased 8 p.c. in value. Production came from the Copper Mountain mine of The Granby Consolidated Mining, Smelting and Power Company Limited, the Britannia Beach operations of Britannia Mining and Smelting Company Limited and from the Tulsequah Chief copper-zinc-lead property. New copper production came early in 1957 from the Motherlode mine, a former copper producer near Greenwood, of Woodgreen Copper Mines Limited, and from the Velvet mine at Rossland of Mid-West Copper and Uranium Mines Limited. Companies preparing for production include Phoenix Copper Company Limited, a subsidiary of Granby, at Granby's former producing mine near Phoenix, and Granduc Mines Limited 25 miles northwest of Stewart. Several other companies had properties under active exploration, including American Smelting and Refining Company in Highland Valley, Cowichan Copper Company Limited on Vancouver Island, and Granisle Copper Limited, a Granby subsidiary, on an island in Babine Lake. Following the sharp drop in the price of copper during the first half of 1957, several companies which had been contemplating production decided to await more favourable market conditions.

With the exception of some 6,600 lb., British Columbia accounted for all the Canadian output of tungsten concentrates in 1956. Output comes from the Salmo operations of Canadian Exploration Company Limited, and in 1956 amounted to 2,200,000 lb. valued at \$6,050,000. The Company has a contract with the General Services Administration of the United States for a maximum of 570,000 short ton-units of tungsten trioxide from 1952 to June 30, 1958, at a price ranging from \$55 to \$60 a unit.

The Province's production of iron concentrates, which in 1956 totalled 331,000 long tons, is shipped to Japan. Output came from two properties: the Iron Hill mine of Utah Company of America on Vancouver Island, which was considered worked out and closed in December 1956, and the Texada Island property of Texada Mines Limited. A third company, Empire Development Company Limited, formed in mid-1956, plans to bring the Elk River magnetite deposit on northern Vancouver Island into production in the latter part of 1957. The Company has contracts with iron and steel interests in Japan for the shipment of 1,380,000 long tons of concentrate over a three-year period. The concentrates will be shipped from Port McNeil, 22 miles from the deposits. In July 1957, British Columbia was shipping iron concentrates to Japan at a rate of 2,000 tons monthly.

The Province in 1956 accounted for 32 p.c. of Canada's output of silver, amounting to 9,331,000 oz. t. valued at \$8,371,000. Most of the silver comes from base-metal operations, the chief source being the Sullivan mine.

Gold production in British Columbia in 1956 totalled 211,000 oz. t. valued at \$7,265,000. The three lode gold producers, Bralorne Mines Limited, The Cariboo Gold Quartz Mining Company Limited and Pioneer Gold Mines of B.C. Limited, accounted for 82 p.c. of the output. By-product gold from base-metal mining operations declined sharply, mainly because of the sizable drop in gold production at the Tulsequah mine.

The Prairie Provinces.—The marked expansion of uranium mining in the Beaverlodge area of northern Saskatchewan and the rapid growth in Manitoba's base-metal potential highlighted the outstanding progress made in metal mining in these two provinces during the review period. With the exception of a minor amount of placer gold, Alberta, which lies almost entirely in the Interior Plains region, has no metal production.

The value of Saskatchewan's metal production increased from \$54,709,000 in 1955 to \$70,671,000 in 1956, mainly because of the increase in the value of uranium output, while that of Manitoba showed a slight decline to \$39,209,000 as a result of reduced sales of nickel concentrate. The operations of Hudson Bay Mining and Smelting Company Limited remain the major source of the base-metal wealth of the two provinces. The Company operates the Flin Flon copper-zinc mine which lies astride the Manitoba-Saskatchewan boundary, a concentrator, a copper smelter and a zinc plant at Flin Flon in Manitoba and three small mines near Flin Flon. The larger part of the Flin Flon orebody lies in Saskatchewan. Base-metal production also comes from the nickel-copper property of Sherritt Gordon Mines Limited at Lynn Lake in northern Manitoba.

Uranium moved into second place, next to copper, in value of output in Saskatchewan in 1956. Production was valued at \$24,292,000, just double that of 1955 and only \$3,300,000 less than the total value of copper produced. Output comes from the Beaverlodge area in the northern part of the Province from the operations of the area's first producer, Eldorado Mining and Refining Limited which started production in April 1953; from Gunnar Mines Limited in St. Mary's Channel section; and from several smaller operations, including those of Lorado Uranium Mines Limited which operates a custom mill in the area. Eldorado carried out extensive underground development and expanded its mill capacity from 750 tons to 2,000 tons daily, of which 150 tons has been allocated to the treatment of custom ores. Gunnar, which entered production in 1955, increased its mill capacity from 1,250 tons to 1,650 tons. Mining is by open-pit methods but the Company is preparing for eventual underground operations and it is hoped that before the open pit is finished all mill feed during the severest winter months will come from underground. Lorado commenced treatment of its own and custom ores in its new 500-ton mill in April 1957. The Company plans to proceed almost immediately with the expansion of the plant to 750 tons. Lorado has contracts with Cayzor Athabaska Mines Limited, St. Michael Uranium Mines Limited, Lake Cinch Mines Limited, National Explorations Limited and Black Bay Uranium Limited. Rix-Athabasca Mines Limited continued to ship its ore to Eldorado for treatment.

Nickel production in Manitoba continued to come from the Sherritt Gordon nickel-copper mine at Lynn Lake. Despite the fact that sales of nickel concentrate in 1956 were lower than in 1955, the Company experienced its best production year in 1956 (1955 figures in brackets) with an output of 19,240,000 (16,667,000) lb. of nickel, 9,000,000 (10,156,000) lb. of returnable copper in concentrate, 107,000 (16,000) lb. of cobalt and 71,000 (55,000) tons of ammonium sulphate. Nickel concentrates from the Lynn Lake mine are treated in the Company's chemical metallurgical plant at Fort Saskatchewan, 15 miles northeast of Edmonton in Alberta. Copper concentrates are shipped to Noranda Mines Limited in Quebec for treatment.

Manitoba's nickel-producing potential was greatly increased with the announcement by International Nickel to proceed with the development of its Mystery Lake-Moak Lake property in the northern part of the Province. The project involves the expenditure of \$175,000,000 to develop two new nickel mines, Thompson and Moak Lake, and related surface plants, the construction of a 30-mile branch rail line from Sipiweesk on the CNR near Thicket Portage and a 22-mile Company-owned rail line between Thompson and Moak Lake, and certain installations in the new town of Thompson which is expected to have an initial population of 8,000. This project and the continued expansion in the Company's Sudbury area facilities are expected to raise Company production to 385,000,000 lb. of nickel a year, an increase of 100,000,000 lb. over output in 1956. Production at the Thompson and Moak Lake mines is expected to start in 1960 and to reach capacity in 1961.

Hudson Bay Mining and Smelting in 1956 produced 92,680,000 lb. of copper, 126,568,000 lb. of zinc, 105,000 oz. t. of gold, 1,587,000 oz. t. of silver, 157,000 lb. of cadmium and 108,000 lb. of selenium. The Company carried out active exploration in the two provinces and discovered three new orebodies near the town of Snow Lake in Manitoba about 74 miles east of Flin Flon. It is proceeding with the development of one of these, the Chisel Lake deposit, and is actively exploring the other two, one of which is at Ghost Lake and the second at Stall Lake.

Saskatchewan and Manitoba together produced 202,150 oz. t. of gold in 1956. Output from base-metal operations totalled 105,600 oz. t. in 1956. The remainder came from three lode gold mines in Manitoba—the San Antonio mine of San Antonio Gold Mines Limited in the Rice Lake area, which also controls the adjoining property of Forty-Four Mines Limited, and the Nor-Acme mine in the Snow Lake area, which is under lease to Britannia Mining and Smelting Company Limited.

Silver is produced as a by-product mainly of base-metal operations, Flin Flon being the chief source. The remainder comes from the Sherritt Gordon Lynn Lake nickel-copper mine, from Nor-Acme mine and San Antonio mines, all in Manitoba. Production from Saskatchewan and Manitoba in 1956 amounted to 1,602,000 oz. t.

Ontario.—The widespread development of new mines, the construction of new milling plants and an intensive exploration of new and old properties combined to make the period under review one of much solid achievement for Ontario's metal-mining industry. The value of metal production rose 9 p.c. over 1955 to a record \$512,356,000 but the full effect of new production stemming from the marked increase in pre-production development activity will not be felt for a year or two. Great strides were made in the development of a major uranium-mining industry in the Blind River area where almost the spectacular has been achieved within a very few years.

As Canada's leading metal producer, Ontario in 1956 accounted for all of the Canadian output of the platinum metals, 94 p.c. of the nickel, 57 p.c. of the gold, 44 p.c. of the copper and 25 p.c. of the iron ore. Significant gains were recorded in the volume and value of the Province's output of copper, nickel, iron ore and uranium. Gold and the platinum metals, however, showed slight declines below 1955.

The Province's nickel output which came from the operations of International Nickel Company, the world's greatest nickel producer, and from Falconbridge Nickel Mines Limited and two small producers, all in the Sudbury area, increased to 334,096,000 lb. valued at \$209,663,000 compared with the 1955 output of 322,322,000 lb. valued at \$198,489,000. International Nickel mined 15,511,000 tons of ore, the highest tonnage in the Company's history. Ninety-two per cent of the ore came from underground operations at the Froid-Stobie, Creighton, Murray, Garson and Levack mines and the remainder from the Froid open pit. The Company also operates two concentrators, two smelters and a copper refinery near Sudbury, and a nickel and cobalt refinery at Port Colborne in southern Ontario. In 1956 it produced 286,000,000 lb. of nickel. Expansion and modernization of production facilities continued in line with the plans to raise the Company's nickel-producing capacity to 385,000,000 lb. by 1961 through the development of its Mystery Lake-Moak Lake properties in northern Manitoba, with a scheduled production of 75,000,000 lb. annually, the remainder to come from expansion in the Sudbury area.

Falconbridge Nickel has an expansion program under way to raise its nickel-producing capacity to 55,000,000 lb. by 1960. Production in 1956 amounted to 43,384,000 lb. compared with 41,137,000 lb. in 1955. Output came from the Company's Falconbridge, Falconbridge East, McKim, Mount Nickel, Hardy and Longvack mines near Sudbury. The Longvack mine started operations in May 1956. The Company also operates three concentrators and a smelter in the Sudbury area and a refinery at Kristiansand in Norway.

A minor output of nickel came from the operations of Nickel Rim Mines Limited and of Nickel Offsets Limited, also in the Sudbury area. The latter property was closed in January 1957 because of the exhaustion of ore reserves. Meanwhile, a number of new

properties were under exploration and development, mainly in the Kenora area in the northwestern part of the Province. However, underground exploration at one of these, Kenbridge Nickel Mines Limited, a Falconbridge subsidiary, was stopped in May 1957.

Copper production rose 6 p.c. in volume and 18 p.c. in value over the 1955 output to 309,199,000 lb. valued at \$126,951,000 and intensive pre-production development at a number of properties, particularly in the Manitouwadge area in northwestern Ontario, indicated a further marked increase in Ontario's copper output starting in 1957. International Nickel accounted for 88 p.c. of the output, and Falconbridge Nickel for 8 p.c. The remainder came from Nickel Rim and Nickel Offsets, Temagami Mining Company Limited in the Temagami area, and Min-Ore Mines Limited near Matachewan.

In the Manitouwadge area, Willroy Mines Limited brought its copper-zinc property into production in July 1957 and Geco Mines Limited expected to start operations in September 1957 at its copper-zinc-silver property. The new Willroy mill has a rated capacity of 1,000 tons and Geco's of 3,300 tons. Since the discovery of copper-zinc deposits in the area in 1953, two rail lines and a highway have been built into it and a modern mining community designed to accommodate 6,000 people is growing up at the Manitouwadge townsite.

Ontario is one of Canada's richest sources of iron ore. Production in 1956 increased 29 p.c. in volume and 17 p.c. in value over 1955 to 5,008,000 long tons valued at \$40,021,000. Production comprised direct shipping ore from Steep Rock Iron Mines Limited, iron sinter from Algoma Ore Properties Limited in northwestern and northern Ontario respectively, and pellets from Marmoraton Mining Company Limited in southeastern Ontario and from International Nickel's new plant at Copper Cliff in the Sudbury area. Shipments from Steep Rock increased from 2,266,000 long tons in 1955 to a new high of 3,317,000 long tons and came mainly from the Company's Hogarth open-pit mine. Steep Rock continued to carry out extensive development work on its orebodies as part of its development program to raise production to 5,500,000 long tons annually commencing in 1959 from both open-pit and underground operations. In the same area, Caland Ore Company Limited is preparing "C" orebody which it has leased from Steep Rock for production by 1960. Caland is looking to an ultimate annual output of 3,000,000 long tons which will bring shipments from the area to a minimum of 8,500,000 long tons by the mid-1960's and to 10,000,000 long tons a few years later.

Algoma Ore Properties Limited in the Michipicoten area produced 1,411,000 long tons of sinter in 1956, slightly less than in 1955, from its Helen and Victoria underground mines. About two-thirds of the siderite ore from the mines is direct sintering and one-third requires beneficiation in the sink-float plant at Jamestown before sintering. The Company is expanding its facilities at Jamestown and carrying out underground development to raise output capacity to 2,000,000 long tons annually by 1958. Marmoraton Mining Company Limited, a subsidiary of Bethlehem Steel Company of Bethlehem, Pennsylvania, shipped 283,000 tons of high-grade iron ore pellets in 1956 from its operations near Marmora by rail to Picton and by boat to the parent company's steel plant at Lackawanna, New York. Early in 1956, International Nickel began the shipment of high-grade iron oxide pellets from its new \$19,000,000 iron-ore recovery plant near Copper Cliff, producing 71,000 long tons that year. At capacity operation, the plant will treat 1,000 tons of nickeliferous pyrrhotite a day for a production of 1,000,000 tons of pellets a year. Noranda Mines Limited operated its sulphur-iron plant at Port Robinson near Welland at about half capacity and produced 48,000 long tons of iron sinter. Exploratory activity during the period was carried out in various areas containing iron-bearing occurrences of possible commercial importance.

Uranium proved to be the real headline winner in Ontario's metal-mining industry during the review period. Two areas were under development, the Blind River area of northern Ontario and the Bancroft area in the southeastern part of the Province. Output rose from a value of less than \$500,000 in 1955 to almost \$6,000,000 in 1956 and was expected to exceed \$100,000,000 in 1957.

Developments in the Blind River area, where companies already in production or preparing for production have officially published reserves of 250,000,000 tons with average grade of 2.0 lb. of uranium or better, have almost overnight made Ontario a major world source of this metal. By September 1956, Eldorado Mining and Refining Limited, the Crown purchasing agent, had signed contracts or given letters of intent to eight companies in the area covering the sale of over \$1,100,000,000 worth of uranium precipitates by Mar. 31, 1963. By 1958, eleven concentration plants are expected to be in operation handling an estimated daily throughput of 34,300 tons. At the beginning of the review period the area had one producer, Pronto Uranium Mines Limited, with a milling capacity of 1,500 tons daily. By July 1957, it had three additional properties in production, the Quirke Lake and Nordic Lake mines of Algom Uranium Mines Limited each at 3,000 tons daily and the property of Consolidated Denison Mines Limited. Four others were scheduled to start operations before the end of 1957. These comprised two (the Lake Nordic at 4,000 tons daily and the Panel at 3,000 tons daily) of the three properties of Northspan Uranium Mines Limited; Can-Met Explorations Limited at 2,500 tons daily, and Stanleigh Uranium Mining Corporation Limited at 3,000 tons daily. Stanrock Uranium Mines Limited and Milliken Lake Uranium Mines Limited, each at 3,000 tons daily, and Northspan at its Spanish American property at 2,000 tons daily are preparing for production during the first half of 1958. The largest operation is that of Consolidated Denison with its 6,000-ton plant, the largest single uranium plant in the world. Northspan holds the largest contract (\$275,000,000) with Eldorado Mining and Refining. Capital outlays to bring the eleven plants in the area into production are estimated at \$275,000,000. A model townsite, Elliot Lake, is under construction and is expected to have a population of 30,000 by 1960.

Uranium production is also coming from the Bancroft area in the southeastern part of the Province where three companies, Bicroft Uranium Mines Limited, Faraday Uranium Mines Limited, and Greyhawk Uranium Mines Limited started to produce during the review period and a fourth, Canadian Dyno Mines Limited, was scheduled to start in April 1958. The Greyhawk mine is shipping its ore to the nearby Faraday mill for treatment. Bicroft and Faraday are each operating 1,000-ton plants while Canadian Dyno is erecting a 1,100-ton plant.

Ontario's output of cobalt comes from the cobalt and silver ores of the Cobalt-Gowganda area in northern Ontario and as a by-product from the nickel-copper ores of the Sudbury district. Production in 1956 at 3,574,000 lb. valued at \$9,055,000 was slightly higher than in 1955. Cobalt ore shipments from the Cobalt-Gowganda area were made chiefly to Deloro Smelting and Refining Company Limited at Deloro, Ont. The ores and concentrates were sold under the Canadian Government's premium price plan on behalf of the United States Government. The plan had been in effect since the start of the Korean emergency in 1951 and was terminated at the end of 1956. International Nickel continued to produce high-purity electrolytic cobalt at its Port Colborne refinery. Deliveries of cobalt in all forms by the Company in 1956 amounted to 1,543,000 lb. while Falconbridge Nickel delivered 543,000 lb.

About 70 p.c. of the Province's production of silver comes from the Cobalt area and the remainder as a by-product from nickel and lode gold mines. Output in 1956 amounted to 6,479,000 oz. t. valued at \$5,812,000.

Gold production in Ontario came from thirty gold mines in the Patricia, Thunder Bay, Porcupine, Kirkland Lake and Larder Lake areas and as a by-product from the base-metal mines in the Sudbury area. The 1956 production of 2,498,000 oz. t. was slightly lower than in 1955 but output during the first half of 1957 showed a slight increase over the same period in 1956. One mine, that of Starrat Nickel Mines Limited in the Red Lake area, ceased production in 1956 because of the exhaustion of ore reserves. Kerr-Addison Gold Mines Limited in the Larder Lake area, Canada's leading gold producer, in 1956 recorded an all-time high production of 473,000 oz. t., an increase of 46,000 oz. t. over the 1955 output.

A minor production of lead and zinc concentrates came from the zinc-lead-silver property of Jardun Mines Limited, 18 miles northeast of Sault Ste. Marie. New zinc production from the Manitouwadge area started in July 1957 from Wilroy Mines and was scheduled to start later in the year from Geco Mines.

Quebec.—Mineral development activity in Quebec reached new peaks during the review period resulting in a marked increase in the Province's metal-producing capacity and confirming its great potentiality as a producer of iron ore and of base metals. Fresh proof of the tremendous wealth of Quebec's varied and extensive mineral resources was found in the discovery in northern Ungava of widespread nickel occurrences in a mineralized belt of rocks extending from Cape Smith on Hudson Bay to Wakeham Bay on Hudson Strait and, in western Quebec, of copper-zinc deposits in the Bell River-Mattagami Lake area. A record 55,523 claims were staked in the Province in 1956.

Quebec ranked second among the provinces in value of mineral production in 1956. Its total mineral output rose almost 20 p.c. above 1955 to \$426,608,000 and the value of its metal production 28 p.c. to \$236,213,000 which was only \$43,000,000 short of the total value of the Province's mineral output in 1954. Quebec is the second largest producer of copper, gold, iron ore, and zinc and the only producer of molybdenite and of titanium ore, the latter being from the large deposits of ilmenite at Allard Lake. Silver, selenium, magnesium, lead and bismuth make up the remainder of the Province's metal production.

Quebec is rapidly becoming a major world source of iron ore. Production in 1956 jumped 90 p.c. in volume over 1955 to 6,960,000 long tons and more than doubled in value to \$56,203,000. Developments under way at various properties indicate an output several times this size and value within the next decade.

With the exception of a minor tonnage from Quebec Iron and Titanium Corporation, production in 1956 came from the operations of Iron Ore Company of Canada in New Quebec-Labrador. This Company mined over 12,000,000 long tons of iron ore, more than 60 p.c. of which came from the Gagnon and French mines in Quebec. The ore was shipped by rail 360 miles to Sept-Îles on the north shore of the St. Lawrence and then by boat mainly to United States. A total of 2,757,712 tons was shipped through the St. Lawrence canal system to Great Lakes ports, with transshipment at Contrecoeur, near Montreal. Of the 1956 output, 9,447,000 tons went to the United States, 1,470,000 tons to the United Kingdom, and 391,000 tons to western Europe; 704,000 tons were utilized in Canada. A new mine, the Ferriman, scheduled for production in 1957, and total shipments from Sept-Îles are estimated at more than 13,000,000 tons for that year.

In addition to Iron Ore Company's large high-grade deposits in New Quebec-Labrador, Quebec has huge tonnages of low-grade iron-bearing material, several deposits of which are being developed toward production. These include the concentrating-grade magnetite deposit of the Hilton Mines, formerly known as the Bristol Mines, about 40 miles northwest of Ottawa, and the holdings of The Cartier Mining Company Limited, a subsidiary of United States Steel Corporation, in the Mount Reed-Mount Wright area about 300 miles northeast of Quebec City. Mining at the Hilton Mines, which is scheduled to start late in 1957, will be by open-pit methods at an annual rate of 600,000 tons of iron ore pellets containing about 66 p.c. iron.

The Cartier Mining Company plans to spend over \$200,000,000 to bring its large, low-grade iron ore deposits into production. Initial output is expected in 1961 at an annual rate of 3,000,000 tons with expansion to 10,000,000 tons possibly by 1965. Eventual output from the Company's operations in the general area could reach several times this figure. Present plans call for the construction of a 150-mile private railway into the area from Shelter Bay on the north shore of the St. Lawrence River.

Exploratory work, including geophysical examination, was done on several properties in the favourable iron-bearing formations which extend in an almost continuous arc from the most northerly tip of the west coast of Ungava Bay to the Mistassini area. At the southern end of the arc, a number of companies, including Jones and Laughlin Steel Corporation, Pickands Mather and Company, Iron Ore Company of Canada, The Steel Company of Canada and Canadian Javelin Limited have extensive holdings.

At the far northern end, west of Ungava Bay, Atlantic Iron Ores Limited and International Iron Ores Limited, both controlled by Cyrus S. Eaton interests of Cleveland, Ohio, and Oceanic Iron Ore of Canada Limited and Consolidated Fenimore Iron Mines Limited have outlined large reserves of concentrating-grade iron ore. The first two companies are negotiating with German steel interests for the sale of concentrates from their properties.

Most of Quebec's base-metal production comes from the western part of the Province, the chief source of output being the Horne mine of Noranda Mines Limited. The Province's output of copper jumped 21 p.c. in volume over 1955 to 244,918,000 lb. in 1956 and 36 p.c. in value to \$101,396,000 because of the high price of copper prevailing in 1956 and the addition of production from new properties. Zinc and lead showed declines in output below 1955, zinc decreasing from 202,862,000 lb. to 175,809,000 lb. and lead from 11,216,000 lb. to 5,629,000 lb.

Noranda Mines treats ore from its Horne mine and custom ores and concentrates from other copper, gold and silver mines. It recovers the copper and precious metals from the anodes at the electrolytic copper refinery of its subsidiary, Canadian Copper Refiners Limited, at Montreal East. Of the 101,406 tons of copper, 413,390 oz. t. of gold, and 2,280,400 oz. t. of silver produced by the Company in 1956, 26,308 tons of copper, 199,630 oz. t. of gold and 779,800 oz. t. of silver were credited to the Horne mine. Expansion initiated by Noranda in 1956 will raise its copper-smelting capacity from 240,000,000 lb. to 350,000,000 lb. a year and will open up a new open-pit operation nearby. The capacity of the Montreal East plant was raised from 17,000 tons to 21,000 tons of refined copper a month.

New copper production amounting to 55,234,000 lb. in 1956 came from Noranda's subsidiary, Gaspé Copper Mines Limited, on Gaspé peninsula, which had completed a 6,500-ton concentrator and smelter in 1955. Operations in 1956 were hampered by a three-month suspension in the supply of hydro-electric power and by a shortage of mine labour. In March 1957, production was again interrupted by a strike which ended early in October 1957. A mine and mill rate of about 4,000 tons a day had been reached prior to the strike. The anodes are shipped to the refinery at Montreal East.

New production also came from the Chibougamau area which is shaping into one of Canada's major copper-producing areas. Output from the new 450-ton mill of Chibougamau Explorers Limited, Campbell Chibougamau Mines Limited, the area's largest producer, and Opemiska Copper Mines (Quebec) Limited was at a rate of well over 50,000,000 lb. a year at the end of the review period. Several other properties in the area were under development, some of which were near the production stage. One of these, Merrill Island Mining Corporation Limited had a 650-ton plant under construction on its property in Doré Lake.

Copper production in western Quebec came from the copper-zinc ores of Waite Amulet Mines Limited, Quemont Mining Corporation Limited, East Sullivan Mines Limited, Normetal Mining Corporation Limited, Golden Manitou Mines Limited; from the new copper-gold mine of Rainville Mines Limited, 16 miles east of Val d'Or; from Beattie-Duquesne Mines Limited at Duparquet, which modified its gold mill to produce copper concentrates from its Hunter mine, and from Lyndhurst Mining Company Limited which started shipping ore to the Beattie-Duquesne mill. The remainder came from the operations of Weedon Pyrite and Copper Corporation Limited and Quebec Copper Corporation Limited in southern Quebec. Ascot Metals Corporation Limited closed its zinc-lead-copper Suffield mine near Sherbrooke owing to exhaustion of commercial ore.

Barvue Mines Limited, a zinc-silver producer in Barraute township of western Quebec, accounted for 48,602,000 lb. of zinc, the largest zinc output in Quebec in 1956. This was a decline of 22,822,000 lb. from the Company's production in 1955. The conversion from open-pit to underground mining was completed, with underground production scheduled at 3,000 tons daily compared to 4,000 tons a day from open-pit operations. Operations at the property ceased early in October 1957.

Zinc production also came from the copper-zinc properties of Quémont, Normetal, Golden Manitou, Waite Amulet, East Sullivan and Weedon Pyrite mentioned above and from West Macdonald Mines Limited in Rouyn-Noranda County and New Calumet Mines Limited, a zinc-lead-gold-silver producer on Calumet Island in the Ottawa River. Zinc concentrates produced in the Province are exported to the United States and Europe.

Lead concentrates were produced at three mines—New Calumet, Golden Manitou and Barvue—New Calumet being the largest producer.

Widespread exploratory activity in Quebec resulted in the discovery of a number of new sources of base-metal wealth. Attracting major attention were the nickel discoveries in northern Ungava where exploratory work disclosed several occurrences of nickel in a mineralized belt of rocks extending from Cape Smith on Hudson Bay to Wakeham Bay on Hudson Strait. Several companies were active in the area during 1957 and development work was done on some of the properties. In mid-1957 the discovery of copper-zinc deposits in the Bell River-Mattagami Lake area touched off a staking rush into that area.

Quebec produced 1,032,000 oz. t. of gold in 1956. Sixty-six per cent of the output came from lode gold mines and the remainder from base-metal operations. Output from the latter was greater than in 1955 because of increased production from the copper-gold mines in the Chibougamau area. Three lode gold mines—Beattie-Duquesne, O'Brien Gold Mines Limited and Sullivan Consolidated Mines Limited—ceased production in 1956 leaving ten in operation.

Molybdenite production comes from Molybdenite Corporation of Canada Limited about 25 miles northwest of Val d'Or, the sole Canadian producer. Output in 1956 totalled 1,452,000 lb. In December 1956, the Company began the production of molybdenic oxide, which will lead to a decrease in imports of the oxide by Canadian steel plants.

Quebec Iron and Titanium Corporation continued to operate at Sorel its experimental smelting plant for the treatment of ilmenite ore from the deposits at Allard Lake, which are among the largest known in the world. Production is in the form of titanium dioxide concentrate and pig iron. Production of titanium dioxide slag at Sorel in 1956 amounted to 209,513 tons containing 150,640 tons of titanium dioxide. Most of the slag produced was exported to United States for the titanium pigment and welding-rod industries. Early in 1957 the Company announced its intention to increase by 60 p.c. production of titanium dioxide slag at its Sorel plant because of the increased demand for slag for processing into titanium dioxide pigment used extensively in paint and paper products and for processing into titanium metal.

The Maritimes.—Major attention in metal mining continued to be directed to the Bathurst-Newcastle lead-zinc area of northeastern New Brunswick which promises to become one of Canada's major base-metal camps. In western New Brunswick, plans were under way to proceed with the development of the deposits of manganese in the Woodstock area. Meanwhile, the two former sources of base-metal production—Keymet Mines Limited, 18 miles northwest of Bathurst in New Brunswick, and Mindamar Metals Corporation Limited on Cape Breton Island in Nova Scotia—ceased production because of the exhaustion of ore. Prince Edward Island has no mineral production.

Exploratory and development activity in the Bathurst-Newcastle area continued at a high level during most of the review period, declining somewhat only in mid-1957 because of low metal prices. Heath Steele Mines Limited, the area's first major producer, commenced operations early in 1957. Several properties, including those of Brunswick Mining and Smelting Corporation Limited, were brought nearer to the production stage, and intensive exploration brought to light a number of major new orebodies.

Heath Steele Mines, a subsidiary of American Metal Company, brought its lead-zinc-copper property some 34 miles northwest of Newcastle into production in February 1957 and by late June was treating 1,200 tons daily in its 1,500-ton mill. A 22-mile railway from Bartibog on the main line of the CNR was scheduled for completion toward the end of 1957. Brunswick Mining and Smelting reported encouraging progress in the intensive research being carried out on its metallurgical problem. It continued development work

on its two orebodies and started on the design of a plant with an initial production of 2,000 tons daily. Anacon Lead Mines Limited and Sturgeon River Mines Limited continued underground development of their properties in the Bathurst area. In the same area, Nigadoos Mines Limited began shaft-sinking on its lead-zinc property. Anaconda Company (Canada) Limited, 30 miles west of Bathurst, and Middle River Mining Company Limited, 12 miles west of Heath Steele, each outlined major sulphide orebodies. Total ore reserves of the various mines in the area calculated to 1,000-foot depth were estimated at over 100,000,000 tons.

In the Woodstock area, Strategic Manganese Corporation Limited, a subsidiary of Stratmat Limited, is working out plans to build a \$15,000,000 electric smelter with an initial capacity of 70,000 tons of ferromanganese and 60,000 tons of iron a year. Metallurgical test work on concentrates from the Company's large low-grade manganese deposit using the Udy process, was carried out in the pilot plant of Strategic-Udy Metallurgical and Chemical Processes Limited at Niagara Falls, Ont., and later at a semi-commercial plant.

The value of metal production in New Brunswick dropped from \$316,000 in 1955 to \$159,000 in 1956 because of the closing of the Keymet lead-zinc-silver mine which had been in production since early in 1954, and the cessation of shipments of tungsten concentrates from the property of Burnt Hill Tungsten and Metallurgical Limited near Napadogan in western New Brunswick.

In Nova Scotia, the value of metal output fell from \$3,884,000 in 1955 to \$1,005,000 in 1956 with the closure of the Stirling lead-zinc-copper mine by Mindamar Metals. The property, which had been in production since 1952, had an annual output valued at about \$3,000,000.

Newfoundland.—Newfoundland in 1956 was Canada's leading source of iron ore. Output which came from the Labrador operations of Iron Ore Company of Canada and of Dominion Wabana Ore Limited on Bell Island increased 21 p.c. in volume and 26 p.c. in value over 1955 to 7,814,000 long tons valued at \$57,699,000. The remainder of the Province's metal production comprises zinc, lead, copper, silver and gold, in order of value, from the operations of Buchans Mining Company Limited near Red Indian Lake in central Newfoundland. The value of metal production in Newfoundland in 1956 jumped 29 p.c. over 1955 to \$79,858,000. The value of all mineral output in 1956 was \$87,752,000.

Iron Ore Company of Canada shipped 12,023,000 long tons of direct-shipping ore from its New Quebec-Labrador deposits in 1956. Of this, 4,058,000 long tons or 52 p.c. of the Province's output, came from the Company's Ruth and Gill mines in Labrador. The Company began operations in 1956 on May 1 and continued through a 203-day season until Nov. 19. The Gill mine spur and yards were completed during 1956. (For other details of the Company's operations and production during the review period, *see* p. 503.)

Dominion Wabana, a subsidiary of Dominion Steel and Coal Corporation, shipped 2,654,000 long tons of beneficiated hematite in 1956. Of this, 490,000 tons went to the parent Company's plant at Sydney, N.S., 1,029,000 tons went to the United Kingdom, 1,039,000 tons to West Germany and the remainder to the Netherlands, France and the United States. The Company has contracted for the sale of ore up to and including 1961 and, to meet these commitments, must produce at least 3,000,000 tons of ore annually. Mechanization of mine and surface operations, a \$22,000,000 program started in 1950, was completed in 1956.

Additional iron-ore production is indicated from the holdings of Canadian Javelin Limited in the Wabush Lake area of Labrador immediately south and adjacent to the Labrador concession of Iron Ore Company of Canada. According to Company estimates, the Canadian Javelin 4,700-sq. mile concession contains huge reserves of concentrating iron ore. Early in 1957, the Company announced agreements with Pickands Mather and Company and other United States steel companies to develop large portions of its holdings. At the close of the review period in June 1957, it was understood that the Company was also negotiating with European steel interests to develop other areas not included in the previous agreements.

Buchans Mining Company milled 366,000 tons of zinc-lead-copper ore in 1956. The concentrates produced contained 74,280,000 lb. of zinc, 46,594,000 lb. of lead and 8,000,000 lb. of copper. The Company also produced 919,000 oz. t. of silver and 8,400 oz. t. of gold. The new MacLean shaft, planned for a depth of 4,000 feet, 1½ miles northwest of the Buchans townsite, was started. In the Notre Dame Bay area, Maritimes Mining Corporation was on schedule in the pre-production development of the old Tilt Cove copper property. A new 2,000-ton concentrator was expected to be ready for operation in September 1957. Ore reserves were reported in March 1956 at 3,941,700 tons averaging 2.05 p.c. copper.

Subsection 2.—Industrial Minerals*

There were important developments in the industrial mineral field during 1956 and 1957. Production records were established for many of the minerals and a number of new deposits were opened up. Especially noteworthy were the developments in the Canadian sulphur industry and the progress made toward production of potash from the rich and extensive deposits in Saskatchewan.

Sulphur.—Pyrite and pyrrhotite together with smelter gases have been the main sources of sulphuric acid and sulphur dioxide in Canada and are accounting for increasing quantities of sulphur products. However, with the development of the natural gas resources of Western Canada a new source of elemental sulphur is coming into being which will in the near future become the main source of sulphur in the country.

Some of the largest gas fields of Western Canada contain gas of the 'sour' variety, that is, gas with a relatively high content of sulphur in the form of hydrogen sulphide. The hydrogen sulphide must be removed from the gas before it is fed to the gas transmission lines. In this process elemental sulphur is obtained. The content of hydrogen sulphide is as high as 37 p.c. in some of the sour gas in Alberta. From every million cubic feet of hydrogen sulphide about 40 short tons of extremely pure sulphur can be obtained, and at a cost comparable with that of obtaining sulphur by the Frasch process.

Prior to 1956 there were two small sulphur recovery plants operating on sour gas in Alberta, producing 110 long tons of sulphur daily. In 1956, Imperial Oil Limited built a plant at the Redwater oilfield north of Edmonton capable of producing 20 long tons of sulphur per day, and late in the same year The British American Oil Company Limited completed a plant at Pincher Creek, Alta., having an initial capacity of 225 long tons of sulphur daily and an eventual capacity of 800 long tons daily. Also in 1956, Jefferson Lake Sulphur Company of New Orleans, La., the third largest sulphur producer in the United States, commenced construction of a plant at Taylor, B.C., to produce 425 long tons of sulphur per day from gas supplied by Pacific Petroleum Limited. This plant, scheduled for operation in November 1957, may be increased in output to 800 long tons per day in 1959. Six other sulphur recovery plants having a total minimum daily productive capacity of 2,400 long tons are proposed for Alberta within the next few years and, provided the present plans of gas transmission companies are carried out, it is possible that 1,000,000 tons of sulphur will be produced annually from natural gas in Western Canada by 1961.

In Montreal a plant to produce 100 long tons of sulphur daily from oil refinery gas, constructed by Laurentide Chemicals and Sulphur Limited is expected to be in operation late in 1957.

Reference has been made in previous Year Books to the Noranda process for converting pyrite and pyrrhotite into sulphuric acid, sulphur, and iron sinter. This process is working successfully at Port Robinson and at Cutler in Ontario. The sulphuric acid plant at Cutler has a daily capacity of 1,000 tons of sulphuric acid and serves the uranium industry in the Blind River district.

Sulphuric acid and liquid sulphur dioxide have also been produced from smelter gases for a number of years. Currently, The International Nickel Company of Canada Limited and the Texas Gulf Sulphur Company are jointly investigating the economics

* Prepared by M. F. Goudge, Chief, Industrial Minerals Division, Department of Mines and Technical Surveys.

of producing elemental sulphur from the sulphur-rich gases of the Nickel Company's new iron-ore recovery plant at Copper Cliff, Ont. The significance of these and of other prospective developments is that within a few years Canada may become second among world producers of sulphur and will have a substantial tonnage available for export. At present Canadian industry imports about one-half of its requirements. Production of sulphur or its equivalent from all sources in Canada in 1956 was 798,520 short tons.

Potash.—It is expected that by 1959 Canada will have become a major producer of potash. The potash deposits of Saskatchewan, discovered in 1943 by Imperial Oil Limited during exploratory drilling for petroleum, have in recent years been intensively prospected by means of core-drills and are now believed to be the largest and richest in the world. In mid-1957, seventeen companies financed by capital from Canada, the United States, Germany and France, held land in the so-called potash belt, and a number are actively engaged in the exploration of their holdings. Two companies—Potash Company of America Limited and International Minerals and Chemical Corporation (Canada) Limited—are sinking shafts to the deeply buried deposits and are building large surface plants in which to prepare the potash for industrial use. The expenditure involved will be in the neighbourhood of \$30,000,000 for each company. A Canadian company—Western Potash Limited (now Continental Potash Corporation Limited)—sank a shaft near Unity, Sask., to a depth of 1,170 feet, but at present this company is inactive.

The potash deposits occur at or near the top of a vast bed of rock salt that underlies most of the Prairies. The potash is at depths of from 2,550 to 7,000 feet, but is nearest the surface (2,550 to 3,500 feet) in a belt 35 to 50 miles wide and nearly 400 miles long that extends diagonally across the Province from the Manitoba border north of Moosomin, to the Alberta border near Manito Lake. The deposits are not known to extend into Alberta but have been found in Manitoba within 15 miles of the Saskatchewan border. The predominant potash mineral is sylvite but in the vicinity of the Quill Lakes some beds of carnallite over 30 feet thick have been found. Beds of intermixed sylvite and rock salt (referred to as sylvinite) over 10 feet thick and containing the equivalent of over 25 p.c. of K_2O are common, and some beds containing the equivalent of 40 p.c. of K_2O are reported.

As a result of exploration most of the activity is now confined to two main areas. The first of these extends from west of Saskatoon to the Quill Lakes. In this area Potash Company of America Limited has its holdings and is sinking a shaft at Patience Lake 14 miles east of Saskatoon.

The second area is south of Yorkton in the eastern part of the Province. At Esterhazy in this district, International Minerals and Chemical Corporation (Canada) Limited has begun sinking a shaft to the potash deposits which here are 3,000 feet beneath the surface.

Estimates made by competent authorities of the tonnage of high-grade potash occurring in Saskatchewan have run as high as 5,000,000,000 tons. In any case it is now known that the deposits are among the largest in the world and in quality they probably surpass all others.

Asbestos.—The asbestos industry is still growing. A major expansion program which began after the end of World War II resulted in productive capacity being more than doubled. Shipments in 1956 totalled 1,014,249 tons valued at \$99,859,969—a new record in value and a near record in quantity. The Canadian asbestos industry supplies over 60 p.c. of the world's requirements of asbestos fibre. The 5,000-ton mill of Lake Asbestos of Quebec Limited under construction at Black Lake in the Eastern Townships of Quebec when placed in operation in late 1958 will add over 100,000 tons of fibre to the Canadian annual production. National Asbestos Mines, a subsidiary of National Gypsum (Canada) Limited, is constructing a mill of 3,000 tons daily capacity just east of Thetford Mines. The largest addition to milling capacity is being made by Canadian Johns-Manville Company at Asbestos, Que., where the annual capacity of its new mill, already the largest in the world, is being increased by one-third to 825,000 tons of fibre. Several other asbestos producers are building new mills with greater capacities than the mills they will replace. Promising deposits are under examination in Newfoundland, the Yukon Territory, and northern British Columbia.

Barite.—Demand for barite remains high and production topped all previous records in 1956 when 320,825 tons valued at \$3,031,034 were shipped; 96 p.c. came from the mine of Magnet Cove Barium Corporation at Walton, N.S. After being crushed and washed, the barite from this deposit is shipped by boat to plants on the shores of the Gulf of Mexico and in South America where it is ground for use in making heavy drilling muds needed to combat high pressures encountered in drilling deep oil wells.

Cement.—The annual productive capacity of the Canadian Portland cement industry increased by 5,000,000 bbl. to a total of 42,000,000 bbl. in 1957 through the addition of kilns to existing plants and the construction of two new cement plants, one built by Lake Ontario Cement Company Limited at Picton, Ont., with a rated yearly capacity of 1,800,000 bbl. and one by Lafarge Cement of North America Limited at Vancouver with a rated yearly capacity of 1,300,000 bbl. Production (shipments) of cement in 1956 amounted to 28,695,331 bbl. valued at \$75,233,321, a record both in quantity and in value.

The Canadian cement industry has increased its production capacity threefold since the end of World War II, but even so has been unable, until 1957, to supply the domestic demand. In recent years it has been necessary to import between 2,300,000 and 3,400,000 bbl. a year. Demand for cement has been accentuated by the heavy requirements of such great engineering works as the St. Lawrence Seaway and Power Project which is using nearly 5,000,000 bbl., most of it from Canadian plants. From 1956 on it is anticipated that only very small imports of cement will be required and efforts will be made to develop an export market for any surplus production.

Clay Products.—Clay products include brick, tile, ceramic pipe, pottery, porcelain and certain types of refractories. Nearly 200 plants are engaged in the manufacture of these products in Canada. Value of production in 1956 reached a record of \$37,784,980. In the larger plants of this industry from Newfoundland to British Columbia a changeover is in progress from periodic and old-type continuous kilns to modern tunnel kilns fired by oil or gas. These tunnel kilns, though high in initial cost, permit better control and greater efficiency. The widespread use of the tunnel kilns is largely related to the imminent availability of natural gas for fuel.

Fluorspar.—Production of fluorspar reached a new high both in quantity and in value in 1956 when 140,071 tons valued at \$3,407,582 were shipped. The most important uses of this mineral are as follows: (1) in the production of sodium aluminum fluoride for use in the aluminum industry; (2) flux in the manufacture of steel; (3) for ceramic purposes. The two principal producers of fluorspar have their mines at St. Lawrence in the Burin Peninsula of Newfoundland. A large part of the Canadian production in recent years was exported to the United States where much of it was stockpiled as a strategic mineral. The removal of fluorspar from the list of minerals to be stockpiled will result in a much lower production in 1957.

Gypsum.—Production of gypsum attained a new high in 1956 when 4,895,811 tons valued at \$7,260,236 were shipped from Canadian quarries, most of it going out of the country in the crude state. It is used principally for wallboard, wall plaster, sheathing board, lath, and tile. The largest deposits are in Nova Scotia from where 84 p.c. of the Canadian production is obtained. In 1956 a new quarry was opened near Windsor, N.S., by Canadian Gypsum Company Limited which will bring the Company's productive capacity up to 11,000 tons per day on a single shift basis. Gypsum has been quarried in this vicinity for well over 100 years and the quarries are among the largest in the world. The gypsum is shipped by boat to the Company's plants along the Atlantic Coast of the United States where it is made into various products.

Lime.—The Canadian lime industry is anticipating the greatest production in its long history in 1957, surpassing the previous record production of 1,331,118 tons valued at \$15,810,904 achieved in 1955. Through the ages lime has been regarded as a construction material and its chief functions were as a plastic binder in masonry and as plaster for walls. These uses now account for only 10 to 15 p.c. of the output—the remainder is

marketed for chemical uses. There is a particular demand for it in the processing of uranium ores. The uranium mills of the Blind River district of Ontario alone will require an estimated 700 tons of lime per day when they are all in operation. To supply this lime the plant of Gypsum Lime and Alabastine Canada Limited at Beachville, Ont., has been enlarged and a new lime plant has been built by North American Cyanamid Limited also at Beachville. Lime for uranium processing is also obtained as a co-product at the magnesia plant of Aluminum Company of Canada at Wakefield, Que.

Spodumene.—A new industrial mineral product was added to the list of those produced in Canada late in 1955 when Quebec Lithium Corporation brought its spodumene deposit near Val d'Or into steady production. Production of lithia in 1956 amounted to 4,789,360 lb. valued at \$2,643,950. The entire production of about 200 tons of concentrates per day is sold under a five-year contract to Lithium Corporation of America at Bessemer, North Carolina. The flotation process that produces the spodumene concentrates also produces feldspar as a co-product. This feldspar, which is a mixture of the soda and potash varieties, can be produced at the rate of 175 tons per day.

Salt.—Production and exports of salt have risen very rapidly since 1954. In 1956 a record 1,590,804 tons valued at \$12,144,476 was produced and a record 333,935 tons valued at \$2,286,830 was exported. Prior to 1955 exports of salt from Canada were very small. In that year Canadian Rock Salt Company started production of rock salt from a new mine at Ojibway, Ont., at the rate of 500 tons per hour, which accounts for the greatly increased annual output. Another rock salt mine is being developed at Pugwash, N.S., by the Malagash Salt Company. Difficulties in sinking the shaft to the salt, which is at a depth of 400 feet, have delayed the opening of this mine which was originally planned for 1957. Dominion Tar and Chemical Company Limited of Montreal through its subsidiary, Sifto Salt Limited, has also started shaft sinking near Goderich, Ont., with the intention of mining a 20-foot bed of pure rock salt found in that locality.

The mining of rock salt on a large scale brings about a major change in the salt industry of this country. Heretofore most of the salt has been obtained by introducing water to deeply buried salt beds and pumping up the resultant brine. The brine was either used as such by nearby industries or the salt was recovered from it by evaporation. Rock salt is a much cheaper product and can be employed for most industrial purposes. Its availability will aid the salt-using chemical industries of Canada.

Sand and Gravel.—The quantity of sand and gravel used in Canada in 1956 was 148,801,268 tons, which far exceeds the tonnage of any other mineral substance marketed. Its value at \$81,457,352 was exceeded by that of only eight mineral products. Favoured by the steadily increasing strictness of specifications for sand for use in concrete, and by the increasing difficulty of obtaining suitable material in quantity from natural deposits, a new industry has developed recently. This is the industry engaged in the manufacture of sand from suitable rocks adjacent to major construction projects, and adjacent to cities where large quantities of sand are required. The requirement of nearly 3,000,000 tons of sand for the concrete of the St. Lawrence Seaway and Power Project was largely filled by manufacturing it from limestone and sandstone obtained nearby. The same deposits also supplied most of the 4,000,000 tons of crushed stone used.

Subsection 3.—Petroleum and Natural Gas*

The rapid development of Canada's petroleum and natural gas resources, initiated by the Leduc oil field discovery of 1947, continues unabated. At the end of 1956 proved reserves of crude oil and natural gas liquids totalled 3,129,304,000 bbl. compared with 72,000,000 bbl. at the end of 1946 and during the intervening ten-year period production amounted to 657,605,839 bbl. In 1956 the new oil found was more than three times the actual production which, at 170,569,200 bbl., was more than twenty-two times the 1946 output. Natural gas reserves in 1956 were in excess of 23 trillion cu. feet compared with

* Prepared under the direction of Dr. Marc Boyer, Deputy Minister of the Department of Mines and Technical Surveys, by R. B. Toombs, Head, Mineral Economics Section, Mineral Resources Division. A survey of oil and gas pipelines will be found in the Transportation Chapter.

4.7 trillion in 1950. Crude oil has, since 1953, maintained its lead in annual production value for all minerals produced in Canada and natural gas is entering a period of rapid growth.

Canadian crude oil production increased by 32.9 p.c. in 1956 over 1955 and by mid-1957 a somewhat smaller advance was indicated for that year. Alberta accounted for 83.6 p.c. of Canada's crude oil production in 1956. Saskatchewan's share, which is increasing steadily, was 12.3 p.c. Manitoba contributed 3.5 p.c. and Ontario, the Northwest Territories, New Brunswick and British Columbia the remainder. British Columbia's first commercial output of crude petroleum took place in 1956.

The size and rate of recent growth of crude oil production in Western Canada is indicated by the following figures:—

<i>Item and Date</i>	<i>Alberta</i>	<i>Saskatchewan</i>	<i>Manitoba</i>
NUMBER OF OIL WELLS—			
December 1954.....	5,068	1,094	284
December 1955.....	6,138	1,655	554
December 1956.....	7,390	2,414	736
NUMBER OF OIL FIELDS—			
December 1954.....	65	30	6
December 1955.....	74	37	11
December 1956.....	86	46	12

Expenditures in Western Canada on exploration and oil-field development programs exceeded \$600,000,000 in 1956. At the end of the year land holdings by oil companies totalled 314,000 sq. miles and exploration carried out included the drilling of 899 exploratory wells. Geophysical work was widespread and, in terms of geophysical party employment, amounted to 1,484 crew-months of which 70 p.c. was in Alberta, 20 p.c. in Saskatchewan and most of the remainder in British Columbia. Total drilling of all categories amounted to 15,749,949 feet in 3,359 oil wells, gas wells and dry holes. Of the total number of wells drilled, 71 p.c. were classified as oil wells, 5.5 p.c. as gas wells and 23.5 p.c. as dry holes. An average of 222 drilling rigs were in use in Western Canada throughout the year.

Exploration programs are being actively continued in Ontario and Quebec, particularly in the search for natural gas. Drilling in southwestern Ontario is being extended out into Lake Erie, and in Quebec geophysical work and drilling are under way in the region between Montreal and Quebec City. In all, 431 holes were drilled in Ontario in 1956, resulting in 157 gas wells and 57 oil wells. Thirteen exploratory wells were drilled in Quebec.

Details of oil and gas field activities by province during 1956 and the first half of 1957 follow.

British Columbia.—In 1956 and 1957 British Columbia's natural gas resources were under rapid development in preparation for initial operation of the Westcoast Transmission Company gas pipeline from the Peace River area to the Pacific Coast. Gas reserves of four trillion cubic feet have been established and northeastern British Columbia is now considered to be one of the important gas sources of North America. Zones of all ages down to and including those of Devonian age have been indicated as potential gas sources. The Fort St. John gas field, where 23 gas wells were completed in 1956, has the largest reserves in the Province and all other fields are within 50 miles of this field. Exploratory drilling is spreading northward from the Fort St. John area; in 1956 one of the 13 successful exploratory wells was drilled at a location 160 miles north-northwest of Fort St. John. At the end of the year, land holdings by exploration companies totalled 43,000 sq. miles. A large gas-processing and sulphur-recovery plant was under construction in the Peace River area.

British Columbia's first oil field was developed in 1956 and oil exploration carried out in 1957 indicated that the Province would soon move up from seventh to fourth place among the oil-producing regions in Canada.

Alberta.—Alberta produced 143,900,000 bbl. of crude oil in 1956, an increase of 27.3 p.c. over 1955. Many exploratory wells were drilled in the western part of the Province during 1956, particularly to test the oil and gas potential of Upper Cretaceous, Lower Cretaceous, Mississippian and Devonian formations in and near the deep Alberta Syncline of western Alberta. Two-fifths of the successful exploratory oil wells found production in Upper Cretaceous formations and one-quarter in the Lower Cretaceous; Mississippian and Devonian oil discoveries together accounted for one-quarter of exploratory successes. Triassic and Pre-Devonian wells made up the remainder. Whereas oil reserves were formerly largely confined to formations of Devonian age, an important oil reserve diversification is now developing throughout the geological sequences of the Western Canada sedimentary basin. The Cardium sand of Upper Cretaceous age, which is being extensively developed in the Pembina field southwest of Edmonton, was found to be productive in 1956 at such widespread locations as the southern part of the Peace River area 175 miles north of Pembina, and at Crossfield 18 miles north of Calgary. Another important exploratory event in 1956 was the drilling of the Union Red Earth 12-17 well, 85 miles east-northeast of Peace River town. Much land was taken up in northern Alberta and Saskatchewan following the drilling of this well and the search for oil in the "Granite Wash" formation overlying the Precambrian basement rocks is under way.

Oil-field development proceeded actively in Alberta during 1956 with the Pembina field continuing to account for a large share of the work. This field is now Canada's largest oil producer and one of the major oil sources of North America. At the end of 1956 it had 1,680 wells compared with 808 a year previously. The South Sturgeon Lake field in the Peace River area, the Joffre and Bentley fields near Red Deer in central Alberta, and the Harmattan field near the Sundre and Westward Ho fields northwest of Calgary were the other most actively developed fields in Alberta during the year. Pipeline transportation facilities were completed for these fields in 1956.

Particular attention was paid to oil conservation measures in several oil fields during 1956. In the Pembina field, water injection operations were commenced to ensure a greater ultimate recovery than would be possible by relying only on the primary producing energy in the oil reservoir. The pressure maintenance technique being used is designed to arrest reservoir pressure declines and may provide for the recovery of an additional 560,000,000 bbl. of oil in addition to the 520,000,000 bbl. of primary recoverable reserves in the field as it is now known. Secondary recovery methods are also in use in the Golden Spike, Leduc-Woodbend, Redwater, Westrose and Turner Valley fields. Close supervision of all oil fields in Western Canada is maintained by the Provincial Government to ensure that field operating procedures are in accordance with the best conservation practices.

In 1956, 134 gas wells were completed successfully. Fifty-four of these were field-development wells and the remainder, exploratory. In the past, large gas reserves were developed at the Pincher Creek, Savanna Creek, Jumping Pound, Sarcee, Harmattan-Elkton, Homeglen-Rimbey, Windfall and Chinook Ridge fields and current exploration programs continue to confirm the prospects for a large natural gas reserve growth in western and northwestern Alberta. Twelve of the natural gas discoveries made in 1956 immediately indicated reserves of 10 billion cu. feet or greater. Most of these are on the western side of the Province. Large reserves have also been built up in the plains region of the eastern half of the Province at such fields as Princess, Bindloss, Cessford, Provost and Nevis where relatively shallow drilling is an incentive to continuing search. The recent successful exploratory and development drilling throughout Alberta raised natural gas reserves from 15,600 billion cu. feet in June 1955 to 18,300 billion cu. feet by September 1956.

The present magnitude and rate of growth of natural gas reserves will ensure adequate supplies for Alberta as well as for the Trans-Canada gas pipeline project. Current reserves are estimated at four times the 20-year requirements of the Trans-Canada project.

A number of Alberta's fields produce "wet gas" and during 1956 the daily capacity of natural gas processing facilities was increased from 331,000,000 to 401,000,000 cu. feet. Ten processing plants were in operation in 1956 and a gas-cycling and sulphur-recovery plant was placed on stream in the Pincher Creek gas field early in 1957.

Saskatchewan.—The finding of crude oil in southeastern Saskatchewan, which commenced with the Midale field discovery in 1953 and the Frobisher field discovery in 1954, continues to be one of the most important accomplishments in Western Canada. The rapid oil-field development since 1954 has transformed Saskatchewan from a small producer of heavy and medium gravity crude oils to a comparatively large producer, with an increasing trend towards light oil output.

Oil fields in southeastern Saskatchewan are being developed on the northeastern rim of the Williston Basin, a large structural feature with its centre in North Dakota. Oil occurs in limestone formations of Mississippian age at depths of from 3,100 to 5,400 feet, the average well depth being approximately 4,100 feet. The oil is predominantly light gravity. The extensive data being obtained on the nature of oil occurrence in this part of Saskatchewan are assisting companies to proceed with field programs at a rapid rate and with much success. In 1956, 33 oil discoveries were made in Saskatchewan, 26 of them in the southeastern part of the Province. In 1956 some 550 oil wells were drilled in 16 fields and one-third of all drilling rigs in Western Canada were located within a 5,000-sq. mile area in the southeast corner of Saskatchewan. As a result of this intensive development program, Saskatchewan's crude oil reserves were increased by 48 p.c. during 1956. A number of the fields are close to each other and early in 1957 four of them were joined to form the Steelman field which, by mid-year, had 470 oil wells.

Producing fields on the west side of Saskatchewan are in the vicinities of Lloydminster, Kindersley and Swift Current. In 1956 there was considerable drilling in the Coleville heavy gravity field near Kindersley. Further development took place in the medium gravity oil fields southeast of Swift Current where crude oil is produced for an export market in St. Paul, Minnesota. Oil fields in western Saskatchewan produce from sandstone formations of Lower Cretaceous and Jurassic ages and the average well depth is 3,000 feet.

Until 1955 the comparatively small Smiley field in western Saskatchewan was the Province's only light gravity crude oil producer, but by the end of 1956, as a result of developments in southeastern Saskatchewan, light gravity crude oil accounted for 35 p.c. of the provincial output, medium gravity crude for 48 p.c., and heavy crudes for 17 p.c. The increasing percentage of light gravity oil is giving Saskatchewan access to greater market outlets and thereby permitting rapid growth in production. Output of crude oil almost doubled in 1956, reaching 21,077,000 bbl., and by mid-1957 a similar rate of increase was indicated for that year.

All natural gas reserves are in fields on the west side of the Province and occur predominantly in formations of Cretaceous age. Six gas discoveries were made in 1956 and 26 field development wells were drilled. Saskatchewan's natural gas resources are much smaller than those of Alberta and British Columbia but good progress has been made in opening up Coleville, Brock and Unity field resources for use in Saskatoon, Prince Albert and other north-central communities. In 1956 the Success field was supplying natural gas to Moose Jaw and during 1957 this service was extended to Regina.

Manitoba.—Manitoba's crude oil production dates from 1951. During 1956 oil exploration was somewhat curtailed compared with the previous two years, but field drilling proceeded actively and production rose from 4,145,756 to 5,786,540 bbl. The three principal fields which account for 90 p.c. of the Province's output are in the immediate vicinity of the town of Virden, 23 miles east of the Saskatchewan border. At the end of 1956 these three fields had 86 p.c. of the 736 oil wells in Manitoba. Production comes from formations of Mississippian age. During 1956 and 1957 a search was being made in areas east of Virden for oil occurrences in other geological formations. There are no gas wells in Manitoba.

Yukon and Northwest Territories.—Development drilling was undertaken in the Norman Wells field during 1956 for the first time since the end of World War II. Four oil wells were completed in the field which is on the Mackenzie River, 90 miles south

of the Arctic Circle. There is no other crude oil and no gas production in the Northwest Territories nor any output of oil or gas in the Yukon Territory. Exploration is being continued, however, in a region west of the southwest end of Great Slave Lake and immediately north of the Alberta border.

Eastern Canada.—No oil discoveries of significance were made in Ontario during 1956 but field development drilling added appreciably to the oil potential. The Rodney field in Elgin County is the largest producer in Ontario. Provincial production remains small, although the output of 593,370 bbl. in 1956 was close to a record in Ontario's long history of oil field activity which dates from 1858.

The search for natural gas proceeds apace. Drilling in 1956 was under way in the counties of Haldimand, Kent, Welland and Norfolk, and offshore in Lake Erie in the general vicinity of Port Alma. By the end of that year, 34 successful gas wells had been drilled in Lake Erie as far as 4.5 miles from shore. Production of 12.8 billion cu. feet of natural gas from fields in Ontario, together with imports from United States of 16.5 billion cu. feet, supplied markets in Toronto and throughout southwestern Ontario.

In Quebec, exploration for oil and gas is being carried on by a number of companies in the St. Lawrence Lowlands between Montreal and Quebec City. Some favourable natural gas results were obtained during drilling in the St. Johns area in 1956 and in the Three Rivers area early in 1957.

The Stony Creek field near Moncton in New Brunswick is the only oil and gas field in the Atlantic Provinces. It produced 16,628 bbl. of crude oil and 190,000,000 cu. feet of natural gas in 1956. Minor development drilling was continued in the field.

Petroleum Refining and Marketing.—Forty-three refineries were in operation in Canada at the end of 1956, with a total daily crude oil throughput capacity of 700,050 bbl. The rapid rate of growth of petroleum refining in Canada in recent years is illustrated for each of the principal refining regions in the following tabulation.

PETROLEUM REFINING THROUGHPUT CAPACITY BY REGIONS

Region	1939		1950		1956	
	Barrels per Day	p.c.	Barrels per Day	p.c.	Barrels per Day	p.c.

The progress made in the marketing of Canadian crude oil in Canada is indicated as follows.

PERCENTAGES OF CANADIAN CRUDE OIL RECEIPTS AT REFINERIES

Region	1939	1946	1950	1956
	p.c.	p.c.	p.c.	p.c.
Maritime Provinces.....	—	—	—	—
Quebec.....	—	—	—	0.3
Ontario.....	0.4	0.5	1.0	84.5
Prairie Provinces and N. W. T.....	37.0	52.5	99.0	100.0
British Columbia.....	—	—	—	100.0
CANADA.....	3.5	10.0	24.4	54.1

During 1956 Canadian refineries received 231,897,606 bbl. of crude oil, of which 125,592,074 bbl., or 54.1 p.c., were from Canadian sources. The percentage of domestic receipts in Ontario is steadily rising. At the same time, deliveries of foreign crude oil to Montreal and Halifax refineries continue to increase rapidly so that the percentage of domestic crude oil received at Canadian refineries has remained practically constant since 1954.

Exports of Canadian crude oil to the United States rose from 14,833,971 bbl. in 1955 to 42,908,085 bbl. in 1956. The increase was equivalent to 66 p.c. of the total increase in oil field production. Forty-five per cent of the exports went to the State of Washington, a total of 41 p.c. to Minnesota, Wisconsin and Michigan, and 14 p.c. to an export market that developed in California during 1956.

A market for Canadian crude oil has not been established in Montreal. Because of the long pipeline transportation distance from Western Canada fields to the Province of Quebec, market outlets have been more readily developed in Western Canada and in adjacent areas of the United States. The building up of crude oil export markets in the Pacific Coast States and in the mid-western States has reduced Canada's net import balance despite the large imports into Montreal, centre of one-third of the nation's petroleum refining capacity. The increased amount of crude oil sold in Canada and the United States in 1956 raised the degree of petroleum self-sufficiency to 65 p.c. This makes allowance for crude oil imports of 106,470,015 bbl., petroleum product imports of 37,633,519 bbl. and petroleum product exports of 2,729,842 bbl.

Natural Gas Marketing.—During 1956, construction was started on the 2,294-mile Trans-Canada natural gas pipeline system to Eastern Canada and the 650-mile Westcoast Transmission system to the Pacific Coast. The construction stage for each project came after a number of years of planning and preparatory work. As construction proceeded, preparations for the marketing of natural gas were well under way in most centres between Vancouver and Montreal. Marketing utilities were being established and distribution facilities installed. With the commencement by late 1957 of natural gas deliveries in many new marketing areas across Canada, a change in the pattern of fuels usage will begin to take place and 1956 natural gas sales of 143.7 billion cu. feet will be greatly surpassed. Much benefit to the people of Canada will result from the availability of large supplies of natural gas to be used as a fuel and as a raw material for chemical manufacture.

Subsection 4.—Coal

The stabilizing trend that appeared in the coal industry in 1955 has continued despite increasing competition for markets from petroleum and natural gas. There is now some evidence that the demand for coal may shortly begin to rise again—that the increasing impetus of the Canadian economy generally and, in particular, the growing use of coal in the production of thermal-electric power to satisfy the clamour for more energy by the expanding pulp and paper and mining industries will beneficially influence the market for this commodity.

At the same time, the market for coal is decreasing in certain fields; the railways are replacing coal-burning locomotives by diesels and oil burners and certain coke and gas-making plants have been found no longer necessary because of the introduction of natural gas. The necessity to operate only those mines that remain economic under the stress of rising costs has resulted in the closing down of the Albion mine in the Stellarton area of Nova Scotia, the Greenhill mine of West Canadian Collieries Limited in the Crowsnest area of Alberta and the Luscar mine in the Mountain Park area of Alberta.

The industry recorded its fifth consecutive decrease in production in 1955, but the decline was only 94,699 tons from the 1954 production of 14,913,579 tons. In 1956 the downward trend was reversed and production increased again to 14,915,033 tons valued at \$95,466,866, though this was still 22.1 p.c. below the record in 1950. Of the 1956 production, 69.1 p.c. was bituminous coal, 15.2 p.c. subbituminous and 15.7 p.c. lignite.

Nova Scotia contributed about 39 p.c., Alberta 29 p.c., Saskatchewan almost 16 p.c., British Columbia and Yukon 10 p.c. and New Brunswick just under 7 p.c. Only Alberta among the provinces registered a decrease as compared with 1955.

The trend towards higher consumption of coal in evidence in 1955 continued throughout 1956. The 36,313,144 tons consumed in 1956 compared with 33,382,173 tons in 1955 and 32,788,268 tons in 1954. Whereas in 1954 almost 56 p.c. of the coal consumed was imported, in 1956 the percentage was over 61, made up basically of bituminous coal used in Central Canada. Coal sales made by retail fuel dealers decreased 3.4 p.c. from 1954 to 1955, and railway coal by 14.1 p.c., but coal used for industrial purposes increased by 2.8 p.c. From 1955 to 1956 retail coal sales again decreased substantially by 13.2 p.c., but railway coal increased 15.9 p.c. and industrial consumption 6.1 p.c. Thus it is becoming clear that, though sales of coal for household and commercial purposes are yielding very rapidly to competitive liquid and gaseous fuels, industrial coal consumption is beginning to show a healthy upswing. The increase in railway consumption in 1956 is accounted for by the fact that the increase in traffic has surpassed the rate of dieselization and thus has resulted in increased use of coal-burning locomotives.

The consumption of briquettes decreased from 962,000 tons in 1954 to 776,761 tons in 1955 but increased again to 879,208 tons in 1956 despite the discontinued operations of one of the producers in Western Canada. About 70 p.c. of the amount marketed (that is, about 82 p.c. of the Canadian output) was used by the railways in the western provinces mainly as locomotive fuel.

The coal industry is continuing its endeavour to not only maintain but to improve its market position by reducing costs of production and by producing not only better coal but the types and grades of coal most suited to the various consumer demands. Mechanization of underground operations has progressed especially in eastern collieries where most of the coal is now mined by mechanical miners of various types. The Dosco Miner developed by the Dominion Steel and Coal Corporation of Nova Scotia is extensively used in all their mines on longwall faces, but other machines of the ripper type suitable for room and pillar mining are also employed. Continuous mechanical mining has not yet been introduced in Western Canada, but there are several technical and engineering reasons for this, associated either with steepness of coal seam associated with friability, or with the toughness of the coal and the desire to retain a maximum of larger sizes.

The extensive use of strip mining also reduces coal costs. Strip mining is practised in all provinces except Nova Scotia, and over 36 p.c. of Canada's output is produced by this method. Practically the whole output in Saskatchewan is strip mined, over 80 p.c. in New Brunswick, about 47 p.c. in Alberta and 25 p.c. in British Columbia. On an average the output per man-day in strip mining increased from 12.5 tons in 1954 to 13.3 tons in 1956, compared with an increase of from 2.6 tons to 2.8 tons for underground. Over the period, output per man-day increased 10 p.c.

In an effort to produce better quality coals the industry continues to direct attention to the use of modern methods of beneficiation such as cleaning, drying, dust-proofing, freeze-proofing and the briquetting of fines. Additional facilities for cleaning and drying of fines have recently been installed at various collieries in both Eastern and Western Canada.

The Federal Department of Mines and Technical Surveys assists the industry by carrying out a group of research projects concerned with the beneficiation and utilization of Canadian coal. Special attention is being given to the cleaning of fines from western Canadian bituminous coals that are particularly friable, and to studying the coking properties of the coals in relation to the possible development of metallurgical industries, especially in Western Canada. The use of coal as a reductant and in the chemical industry is also being studied. In addition the Department is continuing the study of the phenomena of bump and outburst occurring in certain coal mines with the long-range objective of evaluating the causes of these phenomena so that mining at depth may be safe and economical. Detailed stratigraphic and palaeontological studies have been conducted in or near the coalfields of Nova Scotia and New Brunswick to assist in the precise correlation of

coal-bearing strata and their contained coal seams. Petrographic studies of various Canadian coals are also being conducted to aid in a better understanding of the coals in relation to utilization. The Department, through the Geological Survey, maintains a laboratory at Sydney, N.S., in co-operation with the Nova Scotia Department of Mines and the Nova Scotia Research Foundation, and, through the Division of Fuels of the Mines Branch, a laboratory in Edmonton, Alta., in co-operation with the Research Council of Alberta. Both offices assist in the development of the coal industry.

Details on coal in the respective coal-producing provinces follow.

Nova Scotia and New Brunswick.—Nova Scotia produces high-volatile and medium-volatile bituminous coking coals in the Sydney, Cumberland and Pictou areas and some non-coking bituminous coal in the Inverness area. Production in 1955 and 1956 was somewhat lower than in 1954, amounting to 5,787,915 tons valued at \$8.817 per ton in 1956.

Many of the operations have been mechanized to reduce production costs. The Dominion Coal Company Limited plans to establish a large central cleaning plant in the Sydney area, and the Four Star Collieries Limited will also operate a cleaning plant in the Broughton area. When these plants are completed more than 80 p.c. of Nova Scotia's coal production will be benefited by modern methods of cleaning. At the Princess colliery at Sydney Mines, Old Sydney Collieries Limited completed construction of an inclined tunnel from the shaft bottom to the surface to facilitate and reduce costs of transportation of coal from the mine to the cleaning plant. The tunnel is equipped with a 42-inch-wide, 3,800-ft.-long belt conveyor with a capacity of 750 tons per hour.

New Brunswick coal output comes mainly from a single thin seam of high-volatile bituminous coal in the Minto area. Production increased from 781,271 tons in 1954 to 983,482 tons in 1956. In 1955 the first mechanical coal-cleaning plant for cleaning 2 x 0 inch slack was established in this area. As a result of its success, from a technical and marketing viewpoint, a second plant to clean 6 x $\frac{1}{4}$ inch slack was started by another operator in 1956. These two plants will allow for the cleaning of over 34 p.c. of the output of New Brunswick. Both plants are equipped with modern mechanical and thermal drying machines.

Much of the output of the two provinces is used locally for industrial and domestic purposes. The quantity used for thermal power has increased very substantially. About 36 p.c. of the 1956 output was shipped to Central Canada for commercial, industrial and railway use.

Saskatchewan.—This Province produces only lignite coal from the Bienfait and Roche Percee fields in the Souris area. Production continued to increase and in 1956 amounted to 2,302,948 tons as against 2,116,740 tons in 1954. The coal was valued at \$1.829 per ton at the mine. Approximately 52 p.c. of the production was shipped to Manitoba and about 11 p.c. to Ontario for industrial, commercial and household use. With the extensive developments in progress for the production of thermal power in Saskatchewan and Manitoba, it is expected that lignite production will increase very sharply during the next two years.

The output of briquettes, which are made from carbonized lignite and used entirely for household and commercial purposes, was reduced to 39,000 tons in 1956, a decline of 2,000 tons from 1954.

Alberta.—Alberta produces almost all types of coal including a relatively small but growing tonnage of semi-anthracite from the Cascade area. Coking bituminous coal ranging from high to medium volatile was produced in the Crownsnest and Mountain Park areas, although towards the end of 1956 the last operator in the Mountain Park area closed down. Lower rank bituminous non-coking coals are produced in the Lethbridge and Coalspur areas and in several other areas of the foothills. The coal in the Drumheller, Edmonton, Brooks, Camrose, Castor and Carbon areas is subbituminous and that in the Tofield, Redcliff and several other areas is on the border of subbituminous and lignite. All these lower rank coals were used mainly for household and commercial purposes but industrial use is increasing, especially in thermal power production.

Production declined from 4,859,049 tons in 1954 to 4,361,274 tons in 1956. Since the discovery of the Leduc oil field in 1947, coal output in Alberta has declined by 46 p.c. from a production of 8,070,430 tons. About 52 p.c. of the 1956 output was subbituminous coal. The average value of bituminous coal was \$6.069 per ton and of subbituminous coal \$4.745. As already mentioned, the one remaining mine in the Mountain Park area suspended operations in 1956 as did a former large producer of railway coal in the Coal-spur area.

The output of briquettes, which are made from the semi-anthracite coals of the Cascade area and the medium-volatile bituminous coals of the Crowsnest area, amounted to 525,202 tons in 1956 compared with 637,000 tons in 1954. About 17 p.c. was prepared from semi-anthracite coal.

British Columbia.—Bituminous coking coal, ranging from high to low volatile, is mined on Vancouver Island and in the East Kootenay (Crowsnest), Telkwa and Nicola areas. Small quantities of subbituminous coal are produced in the Princeton field. Production in 1956 amounted to 1,469,791 tons as compared with the 1954 total of 1,299,510 tons. The average value of bituminous coal was \$5.973 per ton and subbituminous coal \$5.894 per ton.

Medium-temperature oven (by-product) coke for industrial consumption is manufactured chiefly in the Crowsnest area. The only briquetting plant in the Province produced over 188,000 tons of railway briquettes in 1956 as against 150,000 tons in 1954. A substantial quantity of coking coal from the Crowsnest area was exported to the United States for blending with Utah coals to upgrade the metallurgical coke.

Section 2.—Government Aid to the Mineral Industry*

Subsection 1.—Federal Government Aid

The Department of Mines and Technical Surveys.—The Federal Department of Mines and Technical Surveys came into being on Jan. 20, 1950, in the reorganization of the former Department of Mines and Resources. The Department has five branches—Surveys and Mapping Branch, Geological Survey of Canada, Mines Branch, Dominion Observatories, and Geographical Branch. The Department's functions include the administration of the Emergency Gold Mining Assistance Act and of the Explosives Act.

Surveys and Mapping Branch.—The Branch provides the base maps required for use in the development of Canada's natural resources, produces and distributes all Canadian aids to navigation, is responsible for legal surveys of federal lands and provides a national system of levelling and precision surveys for use as geodetic control by federal, provincial and private agencies.

The Geodetic Survey provides the original surveys that form the framework or basic control for mapping throughout Canada and for engineering and surveying projects related to natural resources development. Survey stations are established at fairly regular intervals across Canada and are marked by permanent monuments whose latitudes, longitudes and elevations above mean sea level are determined with a high degree of accuracy. The determination of geographical position by astronomical observations for mapping purposes in northern areas is being superseded by shoran trilateration in which the adaptation of radar is meeting with success.

The Topographical Survey provides topographical maps that show all significant natural and artificial features fundamental to the study and economic development of mineral and other natural resources. The Field Survey Section is responsible for the field surveys that provide ground control for mapping from aerial photographs, and the Air Survey Section plots and produces maps from these aerial photographs. The National

* Revised, under the direction of the Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

Air Photographic Library indexes, preserves and distributes prints of all aerial photography done by or for the Federal Government. The Topographical Survey also administers the Canadian Board on Geographical Names.

The Legal Surveys and Aeronautical Charts Division makes and records legal surveys of federal Crown lands in the Yukon and Northwest Territories, the National Parks and Indian lands and reserves. This Division prepares aeronautical charts and electoral maps and prepares and distributes flight manuals.

The Canadian Hydrographic Service is responsible for the charting of the coastal and inland navigable waters of Canada, the analyses of tides and tidal current phenomena and the investigation of water-surface elevations of the St. Lawrence-Great Lakes waterway. The resultant data are published in the form of official navigation charts, volumes of Sailing Directions, Tide Tables and Water Level Bulletins.

The Map Compilation and Reproduction Division prepares, drafts and reproduces maps, charts and plans for lithographic printing in multicolour. The work includes the preparation and photo-reproduction of air chart bases, the reproduction and printing of air information for aeronautical charts, the preparation and printing of topographic maps and the reproduction and printing of hydrographic charts.

The Branch had 14 geodetic, 27 topographic, 15 legal survey and 20 hydrographic parties in the field in 1957.

Geological Survey of Canada.—The primary function of the Geological Survey is to obtain information on the geology of Canada that will be of assistance in the search for and development of mineral deposits. The results of its activities also provide a basis for the appraisal and conservation of Canada's mineral resources generally including water supplies, for soil surveys and for the solution of geological problems that frequently arise in construction projects. Reports issued by the Geological Survey include: memoirs with fairly complete descriptive accounts of the geology of particular areas, usually accompanied by geological maps; bulletins dealing with problems rather than areas; papers issued as soon as possible after the close of the field season, treating separately of each area and summarizing the information acquired; and the Economic Geology Series reports, dealing in a comprehensive way with mineral deposits of a particular type. Coloured geological maps are issued on various scales from one inch equalling a few hundred feet to one inch equalling eight or more miles, the common standard scales being one inch to one mile and one inch to four miles. Preliminary maps showing the geology are issued shortly after the field season ends for those areas where the search for metals or minerals is active.

In 1957 the Geological Survey had 72 parties in the field, one more than in 1956. The program featured two large helicopter projects, Operation Mackenzie and Operation Fort George. In Operation Mackenzie, nine officers of the Geological Survey and nine student assistants used helicopters to map 100,000 sq. miles of promising oil and gas territory in the Upper Mackenzie River basin in Northwest Territories lying between latitudes 60° and 64° and extending from longitude 126° to the western edge of the Canadian Shield. In Operation Fort George, three officers and three assistants mapped some 35,000 sq. miles of a 300-mile by 400-mile block of Quebec lying between latitudes 52° and 56° and extending from the Hudson and James Bay coast inland to longitude 68°. This is part of the largest unmapped area in the Canadian Shield. Operation Fort George will be continued in 1958.

The Precambrian Division is responsible for mapping and studying the rocks of the Canadian Shield and of the Arctic Islands. These studies help to establish the geological history and structure of the regions and the information is used as a guide in the search for mineral deposits.

The Post Precambrian Division is responsible for mapping and studying the rocks of the Appalachian and Cordilleran regions and the unconsolidated materials throughout Canada. The application of geology to engineering problems and the study of Canada's groundwater resources are also the responsibility of this Division.

The Fuels and Stratigraphic Geology Division includes stratigraphic palæontology, the geology of fuels (oil, natural gas and coal), subsurface geology and research on coal. Its function is to establish the character, age, thickness and correlation of both exposed and concealed sedimentary formations and to map the distribution and structure of these formations with the object of determining the economic possibilities of prospective oil, gas and coal bearing areas of Canada.

The Mineralogy Division makes mineralogical, geochemical, petrological, and isotopic studies of Canadian mineral deposits and associated rocks. Laboratories provide mineral identifications for the public, supply officers of the Survey with mineralogical, geochemical and geochronological data, and permit research on the genesis of ores, fuels and rocks. Systematic mineral collections are maintained and mineral and rock collections are prepared for use by prospectors and educational institutions.

The Mineral Deposits Division conducts special field studies on the geology of mineral deposits with particular regard to economic possibilities, origin, distribution and the establishment of clues for prospecting for similar deposits. Reports and other information on the geology of Canadian mineral deposits are compiled and special reports on deposits and prospecting published. The Division acts as official agent of the Atomic Energy Control Board in conducting research on uranium deposits and in receiving and compiling reports from companies operating under exploration and mining permits from the Board, and maintains a laboratory for making radiometric assays and identifications of radioactive minerals.

The Geophysics Division gathers, compiles and interprets geophysical data relating to the geology of Canada. Fundamental research is carried out in some phases of geophysical work.

Mines Branch.—The Branch is concerned in the main with the technological problems of the mineral industry and maintains well equipped ore-testing, mineral-dressing, fuel research, ceramic, radioactivity, industrial minerals and physical metallurgical laboratories.

The Mineral Dressing and Process Metallurgy Division serves Canada's mineral industry through tests, investigations and research on all types of Canadian ores. The main purposes of these activities are to devise economic and efficient methods of processing ores—a service of special benefit to new mining ventures and particularly to those developing low grade or complex deposits—and to assist mine operators in solving problems encountered in mill practice.

The work of the Radioactivity Division is centred on investigations relating to treatment of radioactive and less common ores. Activities include research on ore treatment and chemical process methods, provision of chemical and radiometric assay services, development of analytical methods, mineralogical investigations, also work on application of radiometric methods and tracer techniques in the mining and metallurgical industries. Much of the work done is of direct assistance to industry.

The work of the Industrial Minerals Division consists of tests, research and investigative work on industrial minerals, including water used for industrial purposes. The Division makes field studies of deposits, examines industrial processes utilizing them and conducts research into methods of beneficiating minerals from deposits of marginal and submarginal quality to bring them to the standards demanded by modern industry.

The Fuels Division studies the properties of fossil fuels in Canada to determine the most efficient means of utilizing fuel resources. Most of the work on coal is directed to investigations on the immediate problems of the industry and to engineering studies on the most efficient use of coal in combustion applications with particular reference to thermally generated electric power. Such investigations include work on the evaluation of cleaning performance and the beneficiation of coal fines which are difficult to market, the uses of coal in the metallurgical industries and the study of stress phenomena in mining. Research in petroleum is directed mainly to problems in the refining of heavy crudes and bitumens, and to the chemical evaluation of oils and bituminous substances for classification and genetic purposes.

The Physical Metallurgy Division aids the metal industries through the development of new alloys, new manufacturing techniques and new applications and in activities aimed toward improving present practices in metal fabrication. It serves the Department of National Defence by extensive research and investigative work concerned broadly with the development of defence materials and prototype equipment and with the metallurgical problems of that Department. The Division is also operative in the nuclear metallurgy field.

Dominion Observatories.—The two main units of the Dominion Observatories are the Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C. Permanent magnetic observatories are maintained at Agincourt, Ont., Meanook, Alta., and at Resolute Bay and Baker Lake, N.W.T. Seismic stations for recording earthquakes are operated at Victoria, Horseshoe Bay and Alberni, B.C.; Banff, Alta.; Saskatoon, Sask.; Ottawa, Ont.; Seven Falls and Shawinigan Falls, Que.; Halifax, N.S.; and Resolute, N.W.T.

The Dominion Observatory, Ottawa, Ont., is responsible for the time service of Canada which involves nightly astronomical observations of star positions and radio broadcast services for distributing accurate time to all parts of Canada. Other astronomical activities centred at Ottawa include upper atmospheric studies by means of meteor observations, studies of the sun and its effect on earthly conditions and mathematical studies of the atmospheres of the sun and stars. The geophysical work, also administered from Ottawa, includes the magnetic survey of Canada with emphasis on aids to air and sea navigation, as well as field and observatory work of interest to the geophysical prospector. The methods of seismology are employed to study important aspects of the earth's crust in Canada and to assist in world-wide investigations of the earth's interior. Gravity observations are carried on throughout Canada with a generally similar purpose, special attention being paid to methods of locating mineral deposits.

The Dominion Astrophysical Observatory, Victoria, B.C., is devoted to fundamental research into the physical characteristics of the sun, stars, planets and the material of interstellar space. Its 73-inch reflecting telescope is one of the largest in the world and through its use many important contributions have been made to astronomical knowledge.

The Geographical Branch.—The function of the Branch is to organize and make available all the geographical data on Canada that might be of use in promoting the economic, commercial and social welfare of Canada. The work is of two kinds—the compilation of geographical material of national significance, and geographical surveys in the field.

Mineral Resources Division.—Formerly a unit of the Mines Branch, this Division is now a unit of the Department's Administration Branch. It provides a mineral information service that is freely used by government departments, mining and allied industries, and others interested in mining or its significance in the Canadian economy. A mineral resources index inventory is maintained of all known occurrences and of mines, both active and potential. The Division makes economic studies of different phases of the mining industry. It gives technical advice as required for the administration of the Emergency Gold Mining Assistance Act, prepares reports on request to aid in the administration of such matters as tax exemptions on new mining properties, and prepares reports and briefs on general legislation, taxation and tariff matters connected with the mineral industry.

The Dominion Coal Board.*—The Board was established by the Dominion Coal Board Act (R.S.C. 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the Board was constituted a department of government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of advising upon and administering transportation subventions.

* Prepared under the direction of W. E. Uren, O.B.E., Chairman of the Dominion Coal Board.
91593—34

Ancillary to these principal duties the Board is empowered to undertake research and investigations with respect to:—

- (1) the systems and methods of mining coal;
- (2) the problems and techniques of marketing and distributing coal;
- (3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
- (4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
- (5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
- (6) the co-ordination of the activities of Government Departments relating to coal;
- (7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

Assistance by transportation subventions, which have been maintained in varying degrees during the past 28 years, was designed to further the movement of Canadian coals by equalizing as far as possible the laid down costs of Canadian coals with imported coals. As these costs and the conditions of the coal industry are subject to variation, the Board has to review from time to time the rates of subvention and the areas where the assistance is required. The subventions in respect of the various Canadian coals are authorized by Orders in Council and are paid from moneys voted by Parliament for the purpose from year to year. During the year ended Mar. 31, 1957, a total of 3,321,614 tons were shipped under subvention and \$9,115,082 was paid in assistance.

As agent to the Minister of Mines and Technical Surveys, the Board has continued to handle application for loans under the Maritime Coal Production Assistance Act (R.S.C. 1952, c. 179) and administer the loans granted thereunder. The Board has also continued to administer payment under the Canadian Coal Equality Act (R.S.C. 1952, c. 34) which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. In the fiscal year 1956-57, 685,973 tons were bonused at a cost of \$339,556.

The Dominion Coal Board has maintained a continuous review of Canada's energy requirements. In view of the growing impact of oil and natural gas on the markets for Canadian coal,* the Board and its staff have intensified the study of the relation of the competing sources of energy and of possible new outlets for the solid fuel, especially in the field of thermal power.

The Board, since its inception, has worked toward the co-ordination of the activities of various government departments and other bodies relating to coal. On the matter of technical research as related to marketing and distributing coal, the Board has maintained close liaison with the Division of Fuels of the Department of Mines and Technical Surveys. Dominion-provincial conferences on coal research have been held annually since 1949 for the purpose of co-ordination and exchange of ideas.

Government purchases of fuel which constitute an important growing outlet for coal has claimed a greater amount of the Board's time. The Interdepartmental Committee on Fuel, set up in the past to co-ordinate and advise on the purchase and supply of fuel to Armed Services, has remained active. Furthermore, the Dominion Fuel Committee, which was organized in 1956 along similar lines as an advisory body to other government departments, has already demonstrated the value of the establishment of this group.

In a wider sphere the Chairman of the Board has met annually with the Coal Policy Committee of the Provincial Ministers of Mines and the Board has given consideration to recommendations made by the latter body relating to coal. The Board has also kept contact with trade and other associations concerned with the various phases of the Canadian coal industry in order to foster better mutual understanding of governmental and private endeavour. It has generally constituted a central agency through which representations may be made to the Government.

* See pp. 510-515.

The Board has available a comprehensive fund of information on all matters respecting coal dating back to the inception of its predecessor, the Dominion Fuel Board, in 1922. Many other departments of government continue to take advantage of this situation by consultations on various matters having to do with the supply and marketing of coal. The Board maintains the closest co-operation with the Division of Fuels of the Department of Mines and Technical Surveys on fuel problems.

Pursuant to the recommendations of the Royal Commission on Coal (1946), the Board has continued to work for a reduction of customs duties and sales tax on coal mining machinery. It has also maintained its efforts to create a uniform system of coal mine cost accounting which would provide an accurate presentation of the cost of production.

The Dominion Coal Board consists of seven members including the Chairman who is its Chief Executive Officer and has the status of a deputy minister. The Board is responsible to, and subject to the direction of, the Minister of Mines and Technical Surveys.

Subsection 2.—Provincial Government Aid*

Newfoundland.—The Newfoundland Government, through its Mines Branch, provides several valuable services to those interested in prospecting and mining. It will supply certain geological maps of specific areas to interested parties. It will identify specimens sent in from Newfoundland and Labrador and will assay by chemical means those that appear to have some mineral content. If good specimens from a known area warrant further help, a geologist from the Department of Mines and Resources will visit the locality and give advice. Prospecting and mining permits are issued by the Department and claims are registered.

Nova Scotia.—Under the provisions of the Mines Act (R.S.N.S. 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour or the guarantee of bank loans. Any such work must be approved by the Department of Mines. The Government is also authorized to assist the mining industry to procure power on the most economical basis and may guarantee the Nova Scotia Power Commission against any loss incurred on account of capital investments made for that purpose or revenue. Mining machinery and equipment that may be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation on payment, of unworked coal lands, operation of coal mines, loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the Province.

New Brunswick.—There are five divisions under the Mines Branch of the Department of Lands and Mines. The *Mineral Lands Division* administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The *Mine Inspection and Engineering Division* administers the safety regulations governing operations under the Mining Act. Regular inspections of all mines are performed. Laboratory facilities are maintained. It is the responsibility of this Division to approve equipment used in mines. The *Geological Division* carries on general and detailed geological mapping and investigation. Maps and reports are prepared for distribution. Mineral and rock specimens are examined for prospectors. Preliminary examinations of mineral prospects are performed where requested and circumstances warrant. The *Mine Assessment Division* is responsible for collection of mining tax and royalties and preparation of statistics concerning mineral production.

* Compiled from material supplied by the respective provincial governments.

The *Bathurst Office Division* serves as recording office for northeastern New Brunswick. In addition, claim maps as well as topographical, geological and aeromagnetic maps are available for inspection and distribution. The staff is prepared to provide information concerning the Mining Act and the use of various types of maps.

Quebec.—The Mining Act (R.S.Q. 1941, c. 196) authorizes the Quebec Department of Mines to build, maintain and improve roads needed for mining development. Such work is done by contract under the supervision of departmental engineers. The Act gives the Department considerable latitude in this respect. Certain major roads have been built to new mining districts and completely paid for; on the other hand if a particular property requires a branch road from an established highway the owner may be required to contribute a portion of the cost. To prevent the development of uncontrolled settlements in the vicinity of operating mines the Department regulates the use of land and permits the establishment of well organized communities. The municipal organization of such communities is administered by the Department of Municipal Affairs.

The Department maintains well equipped laboratories for the benefit of prospectors, geologists, engineers and mine operators. The facilities include equipment for mineralogy, petrography, ore dressing, and analysis by wet or dry assays, spectrography or X-ray. Qualitative and mineralogical determinations are made free but quantitative analyses are made for a fee according to a tariff schedule. The Mining Act provides free coupons to be used by prospectors in paying for such analyses.

The Province has authorized the establishment of research laboratories to assist mining and metallurgical enterprises in the processes and techniques of extracting, transforming and utilizing ores.

The Department undertakes geological mapping and inspection. The work is divided between two branches, one responsible for reconnaissance (areal) mapping, the other doing detailed mapping in mining districts and inspection of individual deposits or properties. Field parties are headed by geologists or mining engineers. The published reports on these investigations are distributed free upon request. During the field season about 35 parties are maintained in different sections of the Province. Offices, in charge of resident geologists, are maintained in mining districts, to collect, preserve and compile geological information disclosed by mining explorations and individual sheets of the compilation are made available to the public.

The Department employs inspectors whose duties are almost exclusively concerned with the safety of workmen in operating mines. Three Mobile Mine Rescue Stations are also operated and a mine rescue training program conducted throughout the Province.

In the field of education for prospectors, five-week courses are organized each year at Laval and Montreal Universities. University scholarships are granted each year to deserving undergraduates and postgraduate students in mining, geology and metallurgy, thus contributing to the training of qualified engineers for the benefit of the mining industry. Lectures are given to prospectors at different localities throughout the Province.

Ontario.—The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the Province, as briefly enumerated below.

Mining Lands Branch.—This Branch handles all matters dealing with the recording of mining claims, assessment work, etc., and the final issuance of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. As new surveys are made or later data become available maps are revised in keeping with such information. District Mining Recorders maintain offices at strategic locations throughout the Province.

Geological Branch.—A continuing program of geological mapping and investigation is carried out by the geological staff of the Department. Detailed reports and geological maps of the areas studied are made available to the public. In many of the active areas

of the Province resident geologists are engaged to gather and make available to the public, information concerning geological conditions, exploration and development within their respective districts. One geologist specializing in industrial minerals is maintained on the staff to examine deposits of this type, to investigate methods of treatment and recovery of such minerals and to compile data on the uses, specifications and markets for such products. Collection and dissemination of information on groundwater resources is also a function of the Geological Branch. During the winter months courses of instruction for prospectors are held in various centres throughout the Province.

Laboratories Branch.—The Provincial Assay Office located in the East Block of the Parliament Buildings, Toronto, carries out wet analyses and assays of metal and rock constituents on a custom fee basis and also renders the same service free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The Timiskaming Testing Laboratories situated at Cobalt, in addition to performing fire assays and chemical analyses, conducts a bulk sampling plant mainly to assist the producers of the area in the marketing of the cobalt-silver ores. A Cable Testing Laboratory, wherein all hoisting ropes in use at the mines are periodically tested, is operated under the supervision of the Inspection Branch.

Inspection Branch.—The main function of this Branch is the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the Province. Mine rescue stations in the principal mining sections are operated under the supervision of the Inspection Branch.

Exhibitions.—The Department each year presents displays pertaining to mining within the Province at such exhibitions as the Central Canada at Ottawa, the Canadian National at Toronto and at other centres from time to time.

Publications Branch.—All maps and reports of the Department are distributed through the agency of the Publications Branch located at the main office of the Department.

Library.—A mining library for the use of the Department and the public is maintained within the Department. This library is comprised mainly of publications and maps of the Federal and Provincial Governments of Canada as well as of numerous periodicals and bulletins from the United States.

Mining and Access Roads.—In 1951 the Department of Mines undertook a program of road construction in the mineralized areas of the Province, to open them for prospecting and development, and to facilitate the actual operation of mining enterprises. When the importance of this program in its relation to the whole development of northern Ontario became apparent, the Government decided that its scope should be widened, and, with that end in view, an interdepartmental committee was set up early in 1955 to decide on matters of policy, and to determine the locations and priorities of the proposed roads. The Minister of Mines sits on this committee with the Ministers of Lands and Forests, of Public Works, and of Highways.

The Department of Highways supervises the construction of all access roads. Certain roads may be subsidized while others may be financed solely by Department of Mines funds. The sum of \$1,000,000 a year has been made available for this project. Thirty-nine roads, totalling about 420 miles, have been completed since 1951.

Manitoba.—The Mines Branch of the Manitoba Department of Mines and Natural Resources offers five main services of assistance to the mining industry: maintenance, by the Mining Recorder's office at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of historical and current information pertinent to mineral occurrences of interest and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences.

Manitoba also aids the mining industry by the construction of access roads to mining districts.

Saskatchewan.—The assistance given to the mining industry by the Saskatchewan Government consists of: the maintenance at Regina of a Geology Department, under a Chief Geologist (Precambrian); resident geologists stationed in or near the principal mining areas; geological survey parties and reports; prospectors' school and prospectors' assistance plan. The Chief Geologist and staff are available at all times to give information and other help to interested parties. A resident geologist is stationed at Uranium City so as to give all possible assistance to prospectors in that area. During the summer months geological survey parties study and map attractive areas and prepare reports which are made available to anyone interested. The prospectors' school gives basic training in geology, mineralogy and prospecting and exploration techniques to future prospectors. Prospecting has become a skilled and specialized trade and instruction in this field will help young men get a start in a profession very vital to the mining industry of Canada. The prospectors' assistance plan, which is intended to encourage prospecting, assists bona fide prospectors by way of equipment and transportation and provides technical advice regarding geologically favourable areas. Courses on identification of minerals and the use of the geiger counter are conducted at various centres in northern Saskatchewan which are largely settled by Indians and métis.

A long-term program of geophysical surveying is under way. In 1957 an airborne magnetometer and electromagnetic survey was made of an area of approximately 1,700 sq. miles. The resulting maps will be sold at a nominal price to the prospecting and mining fraternity to assist them in utilizing this approach to prospecting.

Alberta.—Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine rescue crews. The oil and gas industries are served in a similar way by the Petroleum and Natural Gas Conservation Board. Its regulatory measures, however, are also concerned with the prevention of waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the Province and has carried forward projects concerned with the uses and development of minerals. The Council has

studied the occurrence, uses and analysis of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, the upgrading and the cleaning of coal and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture.

The Province from time to time has had Commissions examine various aspects of the mining industry when it was considered that their findings would be of assistance in developing such industries. The Province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Corporation Income Tax Act. These follow the parallel provisions in the Federal Income Tax Act.

British Columbia.—The Department of Mines of British Columbia provides the following services: detailed geological mapping as a supplement to the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance in the field to the prospector by departmental engineers and geologists; grubstakes, limited to a maximum of \$500, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

Section 3.—Mining Legislation

Federal Mining Laws and Regulations.—The Federal Government administers the mineral properties of the Yukon and Northwest Territories as well as those within Indian reserves and in National Parks.

Mining Acts and Regulations covering the Yukon and Northwest Territories are administered by the Mining and Lands Division, Northern Administration and Lands Branch, Department of Northern Affairs and National Resources. Mineral rights underlying grants issued for Federal lands are reserved to the Crown in the Yukon and Northwest Territories.

Mining rights in the Yukon and Northwest Territories may be acquired by staking claims under the appropriate Act or Regulations. Twenty-one-year leases of claims may be acquired. These leases are renewable.

The disposal of minerals occurring in Indian reserves is subject to the consent of the Indians occupying the reserve and to treaties relating thereto.

The Acts and Regulations governing mining and quarrying on federal lands are summarized in Report No. 854, entitled *Digest of the Mining Laws of Canada*, issued by the Mines Branch, Department of Mines and Technical Surveys, Ottawa. This publication also lists all the laws and regulations pertaining to mining on federal lands. Copies of these individual Acts and Regulations may be obtained by applying to the Northern Administration and Lands Branch mentioned above. Another publication of interest in connection with mining regulations and available from the Mineral Resources Division of the Department of Mines and Technical Surveys is entitled *Summary Review of Federal Taxation and Certain Other Federal Legislation Affecting Mining, Oil and Natural Gas Enterprises in Canada*.

Provincial Mining Laws and Regulations.*—All Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves and National Parks which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. In Nova Scotia all minerals belong to the Crown except limestone, gypsum and building materials and, in granting land from the Crown, the right to these minerals goes with the title. In Newfoundland mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise mining rights except in Newfoundland must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum, gas) and quarrying. Provincial mining regulations under these divisions are summarized as follows:—

Placer.—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held and the royalties to be paid.

General Minerals.—These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia the most elaborate laws and regulations apply in this division. In all provinces except Alberta a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit and payment of recording fees made except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years. There is no time limit in British Columbia but \$500 assessment work, of which a survey may represent one-fifth, must be performed and recorded before a lease may be obtained. In Quebec a specified number of man-days of work must be performed and the excess may be carried forward for renewals of licence. Before mining can be commenced a mining concession must be purchased for which it is necessary to produce an engineer's report indicating the presence of an orebody. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In the Province of Newfoundland the provincial mining tax has been modified since Confederation on Mar. 31, 1949, to conform with the provincial obligations under the Dominion-Provincial Tax Agreement. No other form of taxation or royalty now exists.

Fuels.—In provinces where coal occurs the size of holdings is laid down, together with the conditions of work and rental under which they may be held. In Quebec, ordinary mining claims give rights to all mineral substances and to their development, and stakings for combustible natural gas, salt, coal, mineral oil or naphtha, or iron sands may cover 1,280 acres per claim. Royalties are sometimes provided for. Acts or regulations govern methods of production. In the search for petroleum and natural gas an exploration permit or reservation is usually required. However, in Alberta, Saskatchewan and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made because exploration costs are applicable in part on the first year's

* Compiled from material supplied by the provincial governments.

rental. In other provinces, except Manitoba, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

Quarrying.—Regulations under this heading define the size of holdings and the terms of lease or grant. On Quebec private lands the quarry belongs to the owner; on Crown lands mineral rights belong to the Crown and may be obtained in accordance with the provisions of the law although the rights to exploit peat or marl must be obtained by special licence.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

Section 4.—Statistics of Mineral Production

The importance of mineral production compared with other primary industries in Canada is indicated in Chapter XVII and its part in the foreign trade of Canada is dealt with in Chapter XXII.

Subsection 1.—Value and Volume of Mineral Production

Statistics of the annual value of mineral production are available from 1886, total production being shown for five-year intervals from that date to 1930 and annually for subsequent years in Table 1. These figures are not strictly comparable throughout the period because of minor changes in methods of computing metallic content of ores sold and valuations of products but they do serve to show broad trends in the mineral industry.

ANNUAL VALUE OF MINERAL PRODUCTION, CANADA 1905-56

The increase in the value of mineral production since the end of World War II has been phenomenal, having more than tripled since 1947. Production per head of the population advanced from \$51.38 in that year to \$128.58 in 1956. Although part of this increase is accounted for by advanced prices, the index of the volume of output from Canadian mines records an advance from 106.2 (1935-39=100) to 272.5 in the same comparison (see Table 4).

1.—Value of Mineral Production 1886-1956

Year	Total Value	Value per Capita	Year	Total Value	Value per Capita	Year	Total Value	Value per Capita

production included from 1949.

² Value of Newfoundland

Current Production.—Continuation of the remarkable expansion in the crude petroleum and iron ore industries, a substantial gain in copper production and smaller gains for most of the other minerals brought the 1956 value of mineral production in Canada above the two billion dollar mark for the first time. The total of \$2,067,700,000 was 15.2 p.c. higher than the 1955 value of output and almost double the figure for 1950. Crude petroleum was far in the lead in gross value of output at \$401,800,000, copper retained second place at \$291,500,000 and nickel was again in third place at \$223,300,000. Iron ore at \$156,300,000 displaced gold in fourth position, the latter dropping to fifth place at \$150,800,000. Next in the ten leading minerals was zinc at \$125,500,000, asbestos at \$109,700,000, coal at \$95,500,000, cement at \$77,900,000 and sand and gravel at \$72,600,000. The 1956 figures on uranium production do not reflect the full impact of the tremendous developments in uranium mining across the country. Four mills were in operation for the full year and two others came into production during the year. The value of \$39,600,000 represented shipments from the refinery at Port Hope, Ont.

The output for metals alone was \$1,134,400,000, up \$126,500,000 or 12.6 p.c. from the 1955 total. Only six of the 23 metals listed showed declines in quantity output compared with the previous year—antimony, gold, lead, magnesium, platinum, palladium and bismuth. Copper output reached a record of 353,000 tons, 8.4 p.c. more than in 1955 and 7.8 p.c. greater than the former high of 328,000 established in 1940. Nickel production was also the greatest on record at 178,000 tons, 1.8 p.c. above the 1955 output. The world supply of nickel, of which Canada's share amounts to about 65 p.c., has been unable to keep up with demands, and wide-spread exploration and development programs have been carried out by leading Canadian producers, an interest intensified by recent price advances. Shipments of iron ore increased 6,200,000 tons to an all-time high of 22,500,000, an advance which has probably raised Canada to fourth place among the iron ore

producing countries of the world. World demand for the principal non-ferrous base metals generally continued strong throughout the year and, with the exception of copper, prices held fairly steady.

The value of non-metallics increased 18.2 p.c. in 1956 to \$171,200,000. Of this total, \$109,700,000 was accounted for by asbestos. While the tonnage of that product was about 2.3 p.c. lower than in 1955, higher prices for certain grades resulted in an increase in value of 14.0 p.c. Most of the other non-metallics increased in value. Salt was up by 37.5 p.c., gypsum by 3.3 p.c. and recoveries of titanium dioxide slag by 30.4 p.c.

The value of mineral fuels was up 24.3 p.c. to \$514,800,000, with crude petroleum accounting for 78.1 p.c. of the total. Crude petroleum has been Canada's leading mineral product since 1953 and in 1956 accounted for almost one-fifth of the entire mineral production value of the country. A 69.7-p.c. increase in output in Saskatchewan, 42.0 p.c. in Manitoba and 27.7 p.c. in Alberta boosted Canada's production to a record total of 170,600,000 bbl. valued at \$401,800,000. The downward trend in coal production was checked in 1956 when tonnage increased slightly to 14,900,000 valued at \$95,500,000. Output of natural gas increased to a new high of 173,300,000 M cu. feet valued at \$17,500,000.

Demand for structural materials continued to expand and the value of output increased 8.3 p.c. in 1956 to \$247,300,000. Portland cement was up 18.6 p.c., clay products such as brick and tile 7.9 p.c. and sand and gravel about 7.2 p.c. The value of stone and lime was down slightly.

Analysis of Current Value and Volume.—To assist in clearer and simpler interpretation of the trends in mineral production in Canada over the ten years 1947-56, the percentage of the total value contributed by each principal mineral in each year is given in Table 3. Values upon which percentages in this table are based are the annual values of mineral production, expressed in Canadian currency, as shown in Tables 1 and 2.

3.—Percentage of the Total Value Contributed by Principal Minerals 1947-56

¹ Includes minor items not specified.

The total volume of mineral output attained a wartime peak in 1941 when the production index* stood at 132. Principally because of the steady recession in the mining of gold and other major metals during the next five years, the index gradually declined and reached a ten-year low point of 97 in 1946. Since then, sharp gains in the production of petroleum and other non-metals together with substantial increases in metals output resulted in a sustained advance to a record high level of 272.5 in 1956.

* The construction of this index, which is a component of the revised index of industrial production, is described in DBS Reference Paper, *Revised Index of Industrial Production, 1935-51*.

4.—Indexes of the Volume of Production of the Principal Mining Industries 1947-56

(1935-39=100)

NOTE.—Comparable figures from 1935 are given in the 1954 Year Book, p. 523.

Subsection 2.—Provincial Distribution of Mineral Production

The continued rise in mineral production in 1956 was shared by all provinces except Nova Scotia where values dropped 0.8 p.c. The Yukon Territory also increased its output but the Northwest Territories reported a decline of 10.3 p.c.

Ontario again led the provinces, producing 31.0 p.c. by value of the mineral output of Canada. Although Ontario's physical production is rising rapidly, the percentage contribution of this Province to the Canadian total is slowly declining, having been 49.4 in 1940 and 35.1 in 1950. Ontario's advance of 9.8 p.c. in 1956 over 1955 resulted mainly from increases in nickel, copper and iron ore. Quebec retained second place, its share of the Canadian total being 20.6 p.c. as compared with 19.9 in 1955 and 21.1 in 1950. Quebec's increase in value of output in 1956 was 19.5 p.c., the highest gains being in copper, iron ore and asbestos. Alberta followed Quebec closely, contributing 19.8 p.c. of the nation's total in 1956, most of it made up of petroleum and natural gas. The increase in the Province in 1956 was 25.4 p.c.

British Columbia, with 9.6 p.c. of Canada's value of mineral production in 1956, contributed 77.7 p.c. of the lead, 52.4 p.c. of the zinc and 32.4 p.c. of the silver. Saskatchewan reported an increase in mineral production of 34.0 p.c. in 1956 and advanced its share of the Canadian total to 5.5 p.c. from 4.7 p.c. in the previous year. Newfoundland with a production doubled in value since 1954, also increased its portion of the Canadian total to 4.2 p.c. in 1956 from 3.8 p.c. in 1955, mostly as a result of heavier iron ore shipments. Manitoba and Nova Scotia each contributed 3.2 p.c. of the total in 1956. The decline in the latter province was caused by lower production of copper, lead and zinc. New Brunswick's contribution, though the lowest among the provinces, showed an encouraging increase of 15.3 p.c. in 1956.

6.—Value of Mineral Production by Province 1947-56

NOTE.—Figures for 1899-1910 are given in the 1933 Year Book, p. 345; for 1911-28 in the 1939 edition, p. 323; for 1929-44 in the 1946 edition, p. 323; and for 1945 and 1946 in the 1956 edition, p. 527.

Subsection 3.—Production of Metallic Minerals

The metallic minerals of greatest dollar value produced in Canada during 1956 were: copper, nickel, iron, gold, zinc, lead, uranium, and silver. The most striking and important advance was recorded by uranium which became the seventh most valuable mineral produced in 1956, although the vast developments in this field were only then beginning to be reflected in production figures. The major metals, including uranium, are dealt with in the following paragraphs.

Copper.—Production in 1956 reached a record of 353,000 tons—8.4 p.c. over 1955 and higher than the former record of 328,000 tons established in 1940. The total value of \$291,500,000 was an increase of 21.6 p.c. in the year despite a softening in world copper prices, making copper Canada's most important metal in point of value.

Ontario led production with 43.8 p.c. of the Canadian total, and Quebec production rose 21.2 p.c. to 122,000 tons and accounted for 34.7 p.c. of the nation's total. Newfoundland increased production 11.5 p.c. to 3,400 tons and Saskatchewan showed a modest gain, but output in Manitoba and British Columbia declined slightly and in Nova Scotia ceased altogether.

7.—Copper Production by Province and Total Value 1947-56

NOTE.—Figures for 1886-1910 are given in the 1916-17 Year Book, p. 272; for 1911-28 in the 1939 edition, p. 335; for 1929-44 in the 1946 edition, p. 331; and for 1945 and 1946 in the 1956 edition, p. 532.

¹ Includes one ton valued at \$536 produced in N.W.T. ² Includes 383 tons valued at \$218,663 produced in Nova Scotia and 3 tons valued at \$1,969 produced in N.W.T. ³ Includes 788 tons valued at \$471,962 produced in Nova Scotia. ⁴ Includes 991 tons valued at \$577,868 produced in Nova Scotia. ⁵ Includes 1,028 tons valued at \$757,758 produced in Nova Scotia and 35 tons valued at \$26,290 produced in New Brunswick. ⁶ Includes 357 tons valued at \$295,846 produced in Nova Scotia and 16 tons valued at \$12,896 produced in New Brunswick.

Nickel.—The output of nickel in 1956 was 3,000 tons higher than in 1955, reaching a total of 178,000 tons worth \$223,300,000.

Canada produced about 65 p.c. of the free world supply of nickel during 1956 mainly from smelters of the International Nickel Company of Canada and Falconbridge Mines Limited both of which are in the Sudbury, Ont., area. The Sherritt Gordon mine at Lynn Lake, Man., is the third largest Canadian producer of ore which is refined at Fort Saskatchewan, Alta. Two smaller mines near Sudbury—Nickel Rim and Nickel Offsets—ship nickel ore to Falconbridge Mines for treatment.

Canada uses only about 3,500 tons of refined nickel annually. Exports amounted to about 104,000 tons in 1956, mostly to the United States, and exports of nickel in matte, etc., amounted to 70,715 tons.

8.—Quantity and Value of Nickel Produced 1947-56

NOTE.—Figures for 1889-1910 are given in the 1929 Year Book, p. 368; for 1911-28 in the 1939 edition, p. 342; for 1929-44 in the 1946 edition, p. 333; and for 1945 and 1946 in the 1956 edition, p. 532.

Year	Quantity	Value	Year	Quantity	Value

Iron Ore.—A 42-p.c. increase in the value of shipments raised iron ore to third place among the metals of Canada, exceeding gold and zinc for the first time. Production of 22,526,000 tons of ore valued at \$156,300,000 reflected gains by all producing provinces except British Columbia where output dropped sharply.

Seven companies shipped ore or concentrates in 1956. The Iron Ore Company of Canada with mines in Quebec and Labrador produced high-grade, direct-shipping ore, mostly for the United States; Dominion Wabana Ore Limited, Bell Island, Nfld., shipped

heavy-media concentrates to the steel plant at Sydney, N.S., and for export; Steep Rock Iron Mines Limited in northern Ontario produced high-grade direct-shipping ore mainly for export to the United States. Algoma Ore Properties Limited also in northern Ontario produced high-grade sinter. In British Columbia, Texada Mines Limited on Texada Island and the Argonaut Mine on Vancouver Island produced a reduced tonnage of magnetite concentrates mainly for export to Japan.

Exports of iron ore in 1956 totalled over 20,000,000 tons valued at \$144,000,000. Of this total, 79 p.c. went to the United States and almost all of the remainder to Europe—mostly to the United Kingdom.

9.—Iron Ore Shipments and Production of Pig-Iron, Ferro-Alloys and Steel Ingots and Castings 1947-56

NOTE.—Figures for 1886-1910 are given in the 1936 Year Book, p. 373; for 1911-28 in the 1939 edition, p. 340; for 1929-44 in the 1946 edition, p. 333; and for 1945 and 1946 in the 1956 edition, p. 535.

¹ Factory shipments since 1953.

² Includes production of 1,272 tons in British Columbia.

Gold.—Production of gold declined 3.6 p.c. in quantity and 3.8 p.c. in value in 1956 compared with 1955. Slight declines were recorded by all producing provinces except Newfoundland, and by the Yukon and Northwest Territories. The increase in production in the Northwest Territories was 9.7 p.c. Canada, despite the small decline in production, retained its position as the third largest producer in the world, accounting for about 13 p.c. of world output.

10.—Quantity and Value of Gold Produced by Province 1947-56

NOTE.—Values are calculated at world prices in Canadian funds. Figures for 1862-1910 are given in the 1916-17 Year Book, pp. 268-269; for 1911-28 in the 1939 edition, pp. 336-337; for 1929-44 in the 1946 edition, p. 332; and for 1945 and 1946 in the 1956 edition, p. 533.

Zinc.—In 1956, zinc production (including refined zinc, zinc ores and concentrates) fell 2.2 p.c. to 424,000 tons from the record high of 433,000 tons established in 1955. Of the 1956 total, 256,000 tons were refined zinc. Nearly all of the zinc concentrates produced in Eastern Canada—about 128,000 tons or 30.2 p.c. of the Canadian total—were exported. Total exports of zinc concentrates in 1956 amounted to 199,000 tons, and exports of refined zinc to 184,000 tons.

11.—Quantity and Value of Zinc Produced 1947-56

NOTE.—Figures for 1911-28 are given in the 1939 Year Book, p. 347; for 1929-44 in the 1946 edition, p. 335; and for 1945 and 1946 in the 1956 edition, p. 534.

¹ Estimated foreign smelter recoveries and refined zinc produced in Canada.

Lead.—Primary lead production dropped 7.9 p.c. in 1956 to 187,000 tons worth \$57,900,000; this followed a decline of 7.2 p.c. in 1955. Output of refined lead amounted to 148,000 tons with exports totalling 80,000 tons. Additional exports of lead in concentrates amounted to 50,000 tons.

British Columbia's mines produced 77.7 p.c. of Canada's lead in 1956. The Consolidated Mining and Smelting Company of Canada at Trail is by far the principal producer and operates the only lead refinery in Canada. Production in Newfoundland in 1956 was 23,000 tons, and in Yukon 13,000 tons; the remainder was mined mostly in Quebec and Ontario. Canada used about 66,000 tons domestically in 1956, a slight decrease from 1955.

12.—Quantity and Value of Lead Produced from Canadian Ores 1947-56

NOTE.—Figures for 1887-1910 are given in the 1929 Year Book, p. 367; for 1911-28 in the 1939 edition, p. 341; for 1929-44 in the 1946 edition, p. 333; and for 1945 and 1946 in the 1956 edition, p. 534.

Uranium.—Uranium production began in Canada in 1942 when this country joined with the United Kingdom and the United States to develop the atom bomb. The Port Radium mine of Eldorado Mining and Refining Limited supplied the initial production and from this modest beginning the uranium mining industry has grown to a total of six producers capable of processing in excess of 10,700 tons of ore per day. Current estimates indicate the operation of 22 mills with a production capacity of 42,000 tons of ore per day.

Uranium mineralization has been found at intervals along the western and southern edges of the Canadian Shield. Production, however, is from four areas within this belt: Great Bear Lake, N.W.T., Beaverlodge, Sask., Blind River, Ont., and Bancroft, Ont. All uranium production must be sold to the Canadian Government. In December 1956 official restrictions concerning uranium production and ore reserves were lifted. The production of uranium is shown for three years in Table 13, the figures representing the value of products shipped from the refinery at Port Hope, Ont.

13.—Value of Uranium by Province 1954-56

Silver.—Silver production in 1956 recorded a gain of 2.9 p.c. in quantity and of 4.7 p.c. in value compared with 1955 but was still below the record output of 1954. About 82 p.c. of the silver produced came from the refining of base metal ores, 15 p.c. from silver-cobalt and silver ores, and 3 p.c. from gold ores.

British Columbia produced 32.4 p.c. of the Canadian total, the Yukon 21.4 p.c., Ontario 22.5 p.c. and Quebec 14.4 p.c. Most of the production goes out of the country. Of the 14,300,000 oz. t. of silver bullion exported in 1956, over 13,000,000 oz. t. went to the United States. In addition, Canada exported 6,900,000 oz. t. of silver in ores and concentrates of which over 90 p.c. went to the United States.

Canada holds third place in world production, following Mexico and the United States.

14.—Quantity of Silver Produced by Province and Total Value 1947-56

NOTE.—Figures for 1887-1910 are given in the 1916-17 Year Book, p. 271; for 1911-28 in the 1939 edition, p. 345; for 1929-44 in the 1946 edition, p. 334; and for 1945 and 1946 in the 1956 edition, p. 535.

¹ Includes relatively small quantities produced in New Brunswick and Alberta.

Metals of the Platinum Group.—Total production of platinum, palladium, rhodium, ruthenium and iridium fell 73,000 oz. t. below 1955 production in 1956 to 312,000 oz. t. Total dollar value dropped very slightly to \$22,100,000 in 1956, of which platinum values were \$15,600,000. All of the platinoid metals were produced in Ontario, mainly from the nickel-copper ores in the Sudbury area.

These metals are recovered in the form of residues in the electrolytic refinery tanks at Port Colborne, Ont., and some at the refinery in Norway to which Falconbridge Nickel Company Limited ships nickel-copper matte.

15.—Quantity and Value of Platinum and Palladium¹ Produced 1947-56

NOTE.—Comparable figures for 1921-39 are given in the 1940 Year Book, p. 340 and for 1940-46 in the 1951 edition, p. 513.

¹ Includes also iridium, rhodium, ruthenium.

Subsection 4.—Production of Non-metallic Minerals (excluding Fuels)

Asbestos is by far the most important item in this group in point of value, followed in order by salt, gypsum and sulphur, which are treated separately below. The group also includes such minerals as titanium dioxide, fluorspar, barite, diatomite, magnesitic dolomite, nepheline syenite, peat moss, quartz and sodium sulphate.

Asbestos.—Despite a 2.3 p.c. decline in shipments of asbestos in 1956 as compared with 1955, the Canadian asbestos industry had the second highest production in its history, shipping 1,039,000 tons of various grades of fibre. Higher prices brought the 1956 value to \$109,700,000, a gain of 14.0 p.c. over the 1955 total. The slight decline in tonnage resulted from decreased use of asbestos in the United States and from intensified competition from Russia in the European market.

Quebec, with eight producing mines, accounted for 95.3 p.c. of the Canadian total, Ontario had one producer which recorded an output of 28,000 tons in 1956 and another mine in British Columbia contributed 22,000 tons. Exports of 964,000 tons in 1956 went mostly to the United States.

16.—Quantity and Value of Asbestos Produced 1947-56

NOTE.—Figures for 1896-1910 are given in the 1911 Year Book, p. 424; for 1911-28 in the 1939 edition, p. 354; for 1929-44 in the 1946 edition, p. 353; and for 1945 and 1946 in the 1956 edition, p. 537.

Salt.—Production from the brine wells of Ontario increased 36.0 p.c. in 1956 over 1955 with increases in Manitoba and Saskatchewan. Alberta production equalled that of 1955 but dollar-value dropped from \$1,000,000 to \$900,000 in 1956. Salt produced in Nova Scotia mines dropped 17,000 tons during the year but value increased \$459,000. Total Canadian production in 1956 was 28.0 p.c. more than in 1955.

17.—Quantity of Salt Produced by Province and Total Value 1947-56

NOTE.—Figures for the years 1926-44 are given in the 1946 Year Book, p. 354, and for 1945 and 1946 in the 1956 edition, p. 538.

Sulphur.—Figures in Table 19 represent the quantity and value of sulphur contained in iron pyrite shipments and in derivatives from smelter gases such as sulphur dioxide, sulphuric acid, etc. Sulphur refined from natural gas production is not included.

During 1956 production increased 135,000 tons and value \$1,500,000. In Canada sulphur is used in the treatment of sulphite pulps and in the manufacture of rayon, explosives, rubber goods, petroleum refining, matches and insecticides.

19.—Quantity and Value of Sulphur Produced 1947-56

NOTE.—Figures for 1926-44 are given in the 1946 Year Book, p. 355 and for 1945 and 1946 in the 1956 edition, p. 539.

Subsection 5.—Production of Fuels

Coal.—During 1956 all coal-producing provinces except Alberta showed increased production, thus checking the downward trend that began in 1950.

Nova Scotia produced 38.8 p.c. of the total tonnage and Saskatchewan 15.4 p.c. Alberta's contribution declined to 29.2 p.c. Exports of Canadian coal remained approximately the same as for 1955 but imports increased by 14.5 p.c.

20.—Coal Production by Province 1947-56

NOTE.—Figures for 1874-1910 are given in the 1911 Year Book, p. 419; for 1911-28 in the 1939 edition, p. 348; for 1929-44 in the 1946 edition, p. 347; and for 1945 and 1946 in the 1956 edition, p. 539.

The sources of coal consumed in Canada in the years 1947-56 are shown in Table 23 and detailed figures of coal made available for consumption in 1955 and 1956 are given in Table 24; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not cleared for consumption until required, and coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally the coal made available for consumption is greater than the apparent domestic consumption as coal is landed at

Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond but, while remaining in bond at the port, it is available for domestic consumption if required.

23.—Consumption of Canadian and Imported Coal in Canada 1947-56

Note.—Figures for 1886-1910 are given in the 1921 Year Book, p. 354; for 1911-28 in the 1939 edition, p. 350; for 1929-44 in the 1946 edition, p. 349; and for 1945 and 1946 in the 1956 edition, p. 540.

¹ Coal reaching Canadian ports whether or not it is cleared through customs, exclusive of 117,508 tons of imported briquettes in 1955 and 118,975 tons in 1956.

Petroleum.—Of the record 1956 total of 170,600,000 bbl. of crude petroleum produced in Canada, 99.6 p.c. was produced west of Ontario. Alberta continued to lead all provinces with an output of 144,300,000 bbl., which was 84.6 p.c. of the national production and an increase of 27.7 p.c. over 1955. Saskatchewan and Manitoba accounted for 14.7 p.c. of the total with both provinces showing substantial gains during the year. British Columbia reported its first production in 1956.

25.—Quantity and Value of Crude Petroleum Produced by Province 1947-56

¹ Includes 101,000 bbl. valued at \$197,250 produced in British Columbia.

Natural Gas Production.—The estimated record flow of natural gas for all Canadian wells during 1956 was 173,300,000 M cu. feet. The production of natural gas in Canada is dependent upon markets and transportation. Some expansion in markets permitted an increase of 14.9 p.c. in natural gas recoveries in 1956. Alberta accounted for 86.6 p.c. of this amount but increases were shown by all producing provinces except New Brunswick. British Columbia reported its first small production from the Fort St. John area.

26.—Quantities of Natural Gas Produced by Province and Total Value 1947-56

NOTE.—Figures for 1920-28 are given in the 1940 Year Book, p. 347; for 1929-44 in the 1946 edition, p. 350; and for 1945 and 1946 in the 1956 edition, p. 543.

¹ Includes 172,000 M cu. feet valued at \$18,455 produced in British Columbia.

Subsection 6.—Production of Structural Materials

Continued high levels of construction in Canada raised the production of structural materials as a group to \$247,300,000 in 1956, the highest on record. The main advances were recorded in New Brunswick, Quebec, Ontario, Manitoba and Alberta. Minor gains

were recorded in all other provinces except Saskatchewan. Cement showed an increase of about 18 p.c. over 1955 and clay products 8 p.c. The output of sand, sand and gravel, and stone remained near the 1955 levels.

Cement.—In 1956, both the value and quantity of cement produced increased about 19 p.c. over 1955. The industry has nearly tripled its output during the past ten years and there are now 16 operating mills in Canada with an annual production capacity of almost 36,000,000 bbl. Factories under construction at Picton, Ont., and at Vancouver, B.C., will augment that capacity. In 1956, Quebec produced 36.4 p.c. of the Canadian total, Ontario 28.3 p.c., Alberta 12.4 p.c., Manitoba 10.6 p.c. and British Columbia 7.6 p.c.

27.—Quantity and Value of Production, Imports, Exports and Apparent Consumption of Cement 1947-56

NOTE.—Figures for 1910-28 are given in the 1939 Year Book, p. 356; for 1929-44 in the 1946 edition, p. 356; and for 1945 and 1946 in the 1956 edition, p. 545.

¹ 'Production' as used here means quantity and value of sales.

² The barrel of cement equals 350 lb.

Clay Products.—The sales value of clay products produced in 1956 was the highest recorded. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale. Ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan have not been developed to any extent.

28.—Value (Total Sales) of Clay Products Produced by Province 1947-56

NOTE.—Figures for 1926-44 are given in the 1946 Year Book, p. 356, and for 1945 and 1946 in the 1956 Year Book, p. 544.

Sand, Gravel and Stone.—Deposits of sand and gravel are numerous throughout Eastern Canada with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of the haul. This accounts for the large number of small pits and the small number of large plants. Every province except New Brunswick and Prince Edward Island produces natural bonded sand but some grades particularly suitable for certain industries demand a much higher price than ordinary sand. Quebec and Ontario contributed 71.3 p.c. of the total quantity of sand and gravel in 1956. The greater part of the output is used in road improvement, concrete works and railway ballast, and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.
